PREFACE.

IN collecting materials for this work, the author has as may be seen from the copiousness of his table of contents, studied brevity of style. This, from the multiplicity of subjects contained in the volume, he deemed essentially necessary. Another important design of the author has been to exhibit, in a strong point of light, those principles of political and religious freedom, to secure which many of our ancestors sacrificed their homes, their fortunes, and even their lives.

We cannot but admire the courage, perseverance, and virtues of our progenitors, when we contemplate the obstacles surmounted by them, the hardships endured, and the unshrinking firmness of purpose which turned a wilderness into fruitful fields, established a government of equal laws, and provided an asylum for the oppressed of all nations.

Having learned, at least to some extent, to appreciate the value of those blessings which have descended to the posterity of the pilgrims, the author would now contribute his mite for the benefit of the present and future generations.

This work is designed for a **UNIVERSAL HISTORY** ; and is also intended as a substitute for those more voluminous works, that find their way to the few only whose resources are sufficient to procure them. The size of the type on which this volume is printed, has enabled

PREFACE.

the publisher to present to his readers more matter than was originally intended for the work; and to give in a duodecimo form, the quantity of reading commonly found in an octavo volume. It will be found to contain the most important events in the general history of this country.

The comparative population, wealth, resources, and progressive improvement in the states and territories, have been particularly noticed, and will be found a source of useful information to those who may design to change their present places of abode.

One entire chapter of this work is devoted to a general view of the states and territories, giving a description of the face of the country, the soil and productions, situation and extent, rivers, increase of population, settlements, &c., and is designed by the author to convey a useful table of information to all

TABLE OF CONTENTS.

CHAPTER I.

Birth, education, and early life of Columbus—Discoveries by Columbus, and others,	5
---	---

CHAPTER II.

From the Settlement of Jamestown, to the Embarcation of the Plymouth Company.

Voyage of Captain Newport,	13
Attack of the Natives,	14
Captain Smith tried and acquitted,	15
Return of Captain Newport to England,	ib.
Distresses of the Colonists,	ib.
Their dissensions,	ib.
Captain Ratcliff made President,	16
Fortifications erected at Jamestown,	ib.
A conspiracy detected in the Colony,	17
The Indians capture Captain Smith,	ib.
Smith liberated by Pocahontas,	ib.
More settlers and provisions arrive,	18
Delusion respecting gold dust,	ib.
First remittance to England,	19
Exploring party visits the Susquehannah,	ib.
First females arrive in the country,	20
New charter, and increase of settlers,	21
Disputes respecting precedency,	22
Distresses by famine—relieved,	23
Sir T. Dale arrives with men and provisions,	24
Another new charter issued,	ib.
Lotteries first granted in England, for the benefit of the settlements,	ib.
Mr. Rolfe marries Pocahontas,	25
Land allotted to individuals,	ib.
Edicts against raising Tobacco,	ib.
Martial law declared,	26
Tyranny of the Deputy Governor,	ib.
Sabbath laws, and penalty for breach thereof—punishment by slavery,	ib.
First colonial assembly convened,	27
Females transported, and sold for wives, their price,	ib.
First convicts transported,	28

CHAPTER III.

From the Embarcation of the Plymouth Company, to the close of the Pequot War.

King's Letters Patent—boundaries,	28
Settlers embark at Southampton,	ib.
Colonists land at Cape Cod,	29
Sabbath first observed in New-England,	30
Great mortality in Plymouth colony,	ib.

Governor Carver dies, Mr. Bradford succeeds,	31
Evils threatened by Indians and famine,	32
Public Fast, and Thanksgiving appointed,	33
Virginia Company form a constitution,	ib.
Massacre in Virginia,	35
Great drought in Plymouth,	ib.
Charlestown settled,	36
Fifteen hundred people arrive at Salem,	ib.
John Winthrop made Governor,	ib.
Churches established,	37
Arrival of Messrs. Haynes, Stone, and Hooker,	ib.
Connecticut river discovered,	38
Difficulty with the Dutch at Hartford,	39
Ravages of the Smallpox,	ib.
Connecticut settled—sufferings,	40
First Court holden in Connecticut,	41
Charter of Connecticut obtained,	ib.
Indian murders,	ib.
Captain Stone, and John Oldham, murdered,	42
Reprisals on the Indians,	43
Indian ambuscade at Saybrook,	ib.
Enterprise under Captain Mason,	45
Attack on a Pequot fort,	52
The fort and wigwams burnt,	ib.
The Dutch restore two captive maids taken by the Pequots, and saved by means of a squaw,	56
Battle with the Indians at Fairfield,	58
The triple alliance at Hartford,	60
Thanksgiving, on account of Peace,	61
New-Haven discovered,	ib.
Earthquake in New-England,	ib.
Increase of settlements in Connecticut,	62
Portsmouth and Exeter settled,	63
New-Hampshire separated from Massachusetts,	64
Rhode Island purchased of the Indians,	66
First permanent settlement in Maine,	ib.
Vermont declared an independent state,	69
Remarks on the religion of the colony,	70
Quakers made their first appearance,	71
First Baptist Church in America,	ib.
Manners and customs,	ib.
Prohibiting the use of tobacco,	ib.
Agriculture and commerce,	72
Arts and manufactures,	ib.
Printing first introduced,	ib.
Education and population,	ib.

PART II.

CHAPTER IV.

Discovery and Progress of the Middle and Southern States.

Hudson's voyage and discoveries,	73
Sir Thomas Dale and the Dutch,	ib.

CONTENTS.

v

Grant of the Dutch West India Company,	74
Settlement of New-Jersey by the Danes,	ib.
Emigration of Swedes and Finns,	ib.
Delaware settled by Swedes and Finns,	ib.
Maryland settled by Roman Catholics,	7
William Clayborne excites rebellion,	ib.
Grant of New-Orleans to Sir R. Heath,	76
Indigent subjects transported to Georgia,	ib.
First house built in Savannah,	ib.
History of all the colonies combined,	ib.
Charter of Connecticut read to the freemen,	ib.
Difficulty in collecting taxes,	77
New-York submits to Colonel Nichols,	ib.
Demand of Sir Edmund Andross,	78
Determined resistance of Captain T. Bull,	ib.
Commencement of Philip's war,	ib.
Defence of a house in Brookfield,	80
Attacks of Indians on several towns,	81
Indian fort taken and destroyed, with many of the men, women, and children,	83
Death of King Philip,	84
Peace concluded with the Indians,	ib.
Form of Government by William Penn,	85
Sir E. Andross demands the Connecticut Charter, which is hidden,	86
Tyrannical proceedings of Andross,	87
War between France and England,	90
Massacre at Schenectady,	ib.
Casco, in Maine, destroyed,	91
An expedition fitted out against Canada,	ib.
Narrative of Sir William Phipps,	ib.
Henry Sloughter appointed Governor of New-York,	ib.
Leisler and Melborne executed,	ib.
Colonel Fletcher succeeds Governor Sloughter,	ib.
Governor Fletcher demands the submission of the Connecticut mi- litia to his command,	ib.
A treaty between Great Britain and France,	93
The surprise of Dover,	ib.
Heroic act of Mr. Dustan,	94
Distressing situation of Mrs. Dustan, and other captives,	96
The Earl of Bellamont appointed Governor,	ib.
War with the French, Indians, and Spaniards,	ib.
Deerfield surprised, and the people killed and made prisoners,	97
Mr. Williams, and other prisoners, redeemed,	ib.
Expedition against Canada,	ib.
Nine transports lost,	98
Samuel Street appointed Governor,	ib.
Indian War in South Carolina,	ib.
Peace between France and England,	ib.
William Burnet appointed Governor,	99
Forts and trading houses built on Lake Ontario,	ib.
Indian War—Peace restored,	100
Settlement of Georgia,	ib.

Disturbance among the Negroes in South Carolina,	ib
War again broke out between England and France,	101
Louisburg taken by the English,	ib
Peace restored in 1748,	103

CHAPTER V.

French and Indian War.

Causes which led to this war,	104
Washington's expedition,	105
Braddock's defeat,	108
Lord Loudon arrives as Commander-in-chief,	111
Loss of Oswego,	112
General Amherst arrives in America,	121
Generals Amherst and Wolfe capture St. John's and Louisbur,	123
An attack upon Ticonderoga,	124
Fort Frontenac taken,	127
Fort Du Quesne taken by General Forbes,	ib.
Expedition against Canada,	128
Quebec taken by General Wolfe,	131
Close of the French and Indian war,	ib.

PART III.

CHAPTER VI.

Causes which led to the American Revolution,	133
Several cargoes of tea destroyed in Boston harbour,	156
Battle of Lexington,	162
Ticonderoga taken by the Americans,	164
Battle of Bunker's Hill,	167
Washington appointed Commander-in-chief of the American forces,	168
Falmouth, in Massachusetts, burnt by the English,	170
An attempt to storm Quebec,	172

CHAPTER VII.

American Revolution continued.

Boston evacuated by the British,	175
Admiral Parker attempts the siege of Charleston,	177
Declaration of Independence,	179

CHAPTER VIII.

American Revolution continued.

New-York taken by the British,	182
Danbury destroyed,	185

CHAPTER IX.

Evacuation of Canada.

Carleton's battle,	186
Battle at Bennington,	190
Battle of Saratoga—Capture of Burgoyne,	192
Battle of Brandywine,	194
Capture of Philadelphia,	ib.
Philadelphia evacuated by the English,	195
Battle at Monmouth,	ib

CHAPTER X.

Operations of the Revolution.

Expedition of Captain Ferguson,	201
Expedition of Colonel Campbell,	202
Georgia occupied by the English,	204
General movements at the South,	205
Storming of Stoney Point,	206
Naval excursion of John Paul Jones,	207
Proceedings at the South,	208
British government organized at South Carolina,	212
Movements of General Gates,	215

CHAPTER XI.

Treason of Arnold—Andre taken.

Count De Grasse's arrival with 3,300 troops,	222
Battle at Yorktown—fall of Cornwallis,	224
Cessation of hostilities,	228
Washington's farewell orders,	229
Evacuation of New-York	232
Parting scene between Washington and his officers,	233
Washington resigns his commission to Congress,	234

CHAPTER XIII.

Of the confederation, formation, and adoption, of the present constitution of the United States,	235
General George Washington elected first President,	ib.
Washington's journey from Mount Vernon to New-York,	236
President's tour through New-England	241
The first census completed in 1791,	244
A treaty with the Creek Indians,	ib.
War with the Northwestern Indians	ib.
General St. Clair's military operation,	ib.
General Wayne's victory,	245
General Washington re-elected President, 1792,	246
Declaration of War by France, against England and Holland,	ib.
Proceedings of Congress,	247

CHAPTER XIV.

John Adams elected President, 1797,	248
Difficulties with France,	ib.
Death of General Washington—doings of the nation,	249
Mr. Jefferson chosen President, and Mr. Burr Vice President,	250
Ohio admitted into the Union in 1803,	251
Tripolitan war,	ib.
Peace with Tripoli,	253
Mr. Jefferson re-elected President, Mr. Clinton Vice President,	ib.
Mr. Burr's proceedings, and trial,	ib.
Difficulties on the ocean,	254
James Madison elected President, Mr. Clinton re-elected Vice President, 1809	256
War declared against Great Britain,	257

Detroit taken, -	258
Naval proceedings, -	258
Mr. Madison re-elected President, and George Clinton Vice President, 1813. -	265
Skirmishes on the sea coast, -	269
Commodore Porter's cruise, -	275
Success at the West, -	282
Perry's Victory, -	287
Commodore Chauncey's cruise, -	301
Fort Mimm's taken, and the garrison murdered, -	309
War with the Indians at the West, -	312
Saybrook attacked, and the shipping destroyed, -	325
The British attempt landing at Stonington. -	327

CHAPTER XV.

Operations of the army on the frontier, -	340
Destruction of the capitol, -	349
The British attack Baltimore—death of General Ross, -	353
Macdonough's victory, -	361
Hartford Convention, -	363
The Creek war renewed, -	363
General Jackson takes Pensacola, -	365
Jackson's Victory, -	373
Peace with Great Britain. -	375

CHAPTER XVI.

General view of the United States, -	375
View of the Western States, -	379
Estimate of the population. -	384

CHAPTER XVII.

President Monroe's Administration, -	388
Mississippi admitted into the Union, -	389
War with the Seminole Indians, -	390
Arkansas admitted into the Union, -	393
Mr. Monroe re-elected President, -	394
Lafayette's landing at New York—his tour -	401
John Quincy Adams elected President, -	409
Lafayette's departure for France, -	416
Doings in Congress, -	419
Death of Adams and Jefferson, -	423
Treaty with M ^o Intosh, -	427
Remarks upon Part Third, -	440
Jackson chosen President, -	449
Baltimore and Ohio Rail Road. -	455

Bunker-Hill Monument.

INTRODUCTION.

Birth, Education, and early Life of Columbus. His discovery of America, and discoveries by Cabot, Hudson, and others.

CHRISTOPHER COLUMBUS, or Columbo, as the name is written in Italian, was born in the city of Genoa, about the year 1435, of poor but reputable and meritorious parentage. He was the son of Domenico Colombo, a woolcomber, and Susanna Fontanarossa, his wife; and his ancestors seem to have followed the same trade for several generations in Genoa. Attempts have been made to prove him of illustrious descent, and several noble houses have laid claim to him since his name has become so renowned as to confer rather than receive distinction. It is possible some of them may be in the right, for the feuds in Italy in those ages had broken down and scattered many of the noblest families, and while some branches remained in the lordly heritage of castles and domains, others were confounded with the humblest population of the cities. The fact, however, is not material to his fame; and it is a higher proof of merit to be the object of contention among various noble families, than to be able to substantiate the most illustrious lineage. His son Fernando had a true feeling on the subject. "I am of opinion," says he, "that I should derive less dignity from any nobility of ancestry, than from being the son of such a father."

Columbus was the oldest of four children; having two brothers, Bartholomew and Giacomo, or, as his name is translated into Spanish, Diego, and one sister, of whom nothing is known, excepting that she was married to a person in obscure life, called Giacomo Bavarello.

While very young, Columbus was taught reading, writing, grammar, and arithmetic, and made some proficiency in drawing. He soon evinced a strong passion for geographical knowledge, and an irresistible inclination for the sea; and in after life, when he looked back upon his career with a solemn and superstitious feeling, he regarded this early determination of his mind as an impulse from the deity, guiding him to the studies, and inspiring him with the inclinations, proper to fit him for the high decrees he was destined to accomplish. His father, seeing the bent of his mind, endeavoured to give him an education suitable for maritime life. He sent him, therefore, to the university of Pavia, where he was instructed in geometry, geography, astronomy, and navigation; he acquired also a familiar knowledge of the Latin tongue, which at that time was the medium of instruction, and the language of the schools. He remained but a short time at Pavia, barely sufficient to give him the rudiments of the necessary sciences; the thorough acquaintance with them which he displayed in after life, must have been the result of diligent self-schooling, and of casual hours of study, amidst the cares and vicissitudes of a rugged and wandering life. He was one of those men of strong natural genius, who appear to form themselves; who, from having to contend at their very outset with privations and impediments, acquire an intrepidity in braving, and a facility in vanquishing difficulties. Such men learn to effect great purposes with small means, supplying the deficiency of the latter by the resources of their own energy and invention. This is one of the remarkable features in the history of Columbus. In every undertaking, the scantiness and apparent insufficiency of his means enhance the grandeur of his achievements.

Shortly after leaving the university, he entered into nautical life, and, according to his own account, began to navigate at fourteen years of age. A complete obscurity rests upon this part of his history. It is supposed he made his first voyages with one Colombo, a hardy captain of the seas, who had risen to some distinction by his bravery, and who was a distant connexion of his family.

The seafaring life in those days was peculiarly full of hazard and enterprise. Even a commercial expedition resembled a warlike cruise, and the maritime merchant had often to fight his way from port to port. Piracy was almost legalized. The frequent feuds between the Italian states; the cruising of the Catalonians; the armadas fitted out by noblemen, who were petty sovereigns in their own domains; the roving ships and squadrons of private adventurers; and the holy wars waged with the Mahometan powers, rendered the narrow seas to which navigation was principally confined, scenes of the most hardy encounters and trying reverses. Such was the rugged school in which Columbus was reared, and such the rugged teacher that first broke him in to naval discipline.

There is an interval of several years, during which we have but one or two shadowy traces of Columbus, who is supposed to have been principally engaged in the Mediterranean, and up the Levant, sometimes in voyages of commerce, sometimes in warlike contests between the Italian states, sometimes in pious and predatory expeditions against the infidels, during which time he was often under the perilous command of his old fighting relation, the veteran Colombo.

Columbus arrived at Lisbon about the year 1470. He was at that time in the full vigour of manhood, and of an engaging presence; and here it may not be improper to draw his portrait, according to the minute descriptions given of him by his contemporaries. He was tall, well formed, and muscular, and of an elevated and dignified demeanour. His visage was long, and neither full nor meagre; his complexion fair and freckled, and inclined to ruddy; his nose aquiline, his cheek bones were rather high, his eyes light gray, and apt to enkindle; his whole countenance had an air of authority. His hair, in his youthful days, was of a light colour, but care and trouble soon turned it gray, and at thirty years of age it was quite white. He was moderate and simple in diet and apparel, eloquent in discourse, engaging and affable with strangers, and of an amiableness and suavity in domestic life, that strongly attached his household to his person.

His temper was naturally irritable ; but he subdued it by the magnanimity of his spirit, comporting himself with a courteous and gentle gravity, and never indulging in any intemperance of language. Throughout his life, he was noted for a strict attention to the offices of religion. The Sabbath was to him a day of sacred rest, on which he would never sail from a port, unless in a case of extreme necessity.

While at Lisbon, he became acquainted with a lady of rank, named Dona Felipa, who resided in the convent. The acquaintance soon ripened into attachment, and ended in marriage.

When Columbus had once formed his theory, it became fixed in his mind, with singular firmness. He set it down as a fundamental principle, that the earth was a terraqueous globe, which might be travelled round from east to west, and that men stood foot to foot when on opposite points.

This great man, when about forty years of age, formed the idea of reaching the East Indies by sailing westward. His fortune being small, and the attempt requiring effectual patronage, he laid his plan before the senate of Genoa, desirous that his native country should profit if he was successful ; the scheme, however, appearing chimerical, was rejected. He then repaired to the court of Portugal ; and although the Portuguese were at that time distinguished for their commercial spirit, and John II. who then reigned, was a discerning and enterprising prince, yet the prejudices of the great men in his court, to whom the matter was referred, caused Columbus finally to fail in his attempt there also. He next applied to Ferdinand and Isabella, king and queen of Arragon and Castile, and at the same time sent his brother Bartholomew (who followed the same profession, and who was well qualified to fill the immediate place under such a leader) to England, to lay the proposals before Henry VII. which likewise, very fortunately for the future well being of the country, met with no success. Many were the years which Christopher Columbus spent in ineffectual attendance at the Castilian court ; the impoverished state into which the finances of the united kingdom were

reduced by the war with Grenada, repressed every disposition to attempt great designs. But the war being at length terminated, the powerful mind of Isabella broke through all obstructions; she declared herself the patroness of Columbus, while her husband, Ferdinand, declining to partake as an adventurer, in the voyage, only gave it the sanction of his name. Thus did the superior genius of woman effect the discovery of one half of the globe!

The ships sent out on this important search were only three in number, two of them very small, with ninety men, victualled for a year's voyage. Although the expense of the expedition had long remained the sole obstacle to this undertaking, yet, when every thing was provided, the cost did not amount to more than sixteen thousand five hundred dollars, for which purpose the queen disposed of her jewels to raise the amount.

Columbus set sail from the port of Palos in the province of Andalusia, August 3d, 1492: He proceeded to the Canary Islands, and thence directed his course due west, in the latitude of about 28 N. In this course he continued for two months, without falling in with any land, which caused such a spirit of discontent and mutiny to arise, as the superior address and management of the commander became unequal to suppress, although for those qualities he was eminently distinguished. He was at length reduced to the necessity of entering into a solemn engagement, to abandon the enterprise and return home, if land was not discovered in three days. Probably he would not have been able to retain his men so long from acts of violence and outrage, in pursuing so untired and dreary a course, had they not been sensible that their safety in returning home, depended very much on his skill as a navigator, in conducting the vessel.

About midnight of the 11th of October, 1492, the cry was, land, land, which proved to be one of the Bahama islands, which Columbus named San Salvadore; it was only three deg. 30 min. lat. to the south of the island of Gomora, one of the Canaries, whence he took his departure. This navigator was still so confident in the opinion he had formed before he undertook the voyage, that he

believed himself then to be on an island which was situated adjacent to the Indies. Proceeding towards the S. he saw three other islands which he named St. Mary, Ferdinand, and Isabella. At length he arrived at a very large island, and as he had taken seven of the natives of San Salvadore on board, he learned from them that its name was called Cuba, but he gave it the name of Juanna. He next proceeded to an island which he had called Española, in honour of the kingdom by which he was employed, and it still bears the name of Hispaniola.

Here he built a fort, and formed a small settlement; he then returned home, having on board some of the natives whom he had taken from the different islands, on the past sage. He was overtaken by a storm which had nearly proved fatal. During the storm, Columbus hastily enclosed in a cake of wax, a short account of his voyage and discovery, which he hoped, should he perish, might fall into the hands of some navigator, or be cast ashore, and thus the knowledge of his discovery be preserved to the world. But the storm abated, and he arrived safe in Spain, March 15th, 1493, having been seven months and eleven days on this most important voyage.

On his arrival, letters patent were issued by the king and queen, confirming to Columbus and to his heirs, all the privileges contained in an agreement which had been enacted before his departure.

Not only the Spaniards, but the other nations of Europe, seem to have adopted the opinion of Columbus, in considering the countries which he had discovered as a part of India; whence Ferdinand and Isabella gave them the name "Indies" in the ratification of their former agreement with Columbus; even after the error was detected, the name was retained, under the appellation of "West Indies." Nothing could possibly tend more effectually to rouse every active principle of human nature, than the discoveries which Columbus had made; no time was lost or expense spared, in preparing a fleet of ships, with which this great man should revisit the countries he had made known.

Seventeen ships were made ready in six months, and fifteen hundred persons embarked on board of them,

among whom were many noble families, who had filled honourable stations. Ferdinand, now desirous of securing the benefits of these discoveries, applied to the Pope to be invested with a right in their newly discovered country, as well as to all future discoveries in that direction; but as it was necessary that there should be some favour of religion in the business, he founded his plea on a desire of converting the savage natives to the Romish faith, which plan had its desired effect.

Columbus sailed from the port of Cadiz, on the 25th of September, 1493. When he arrived at Española, he had the affliction to find that all the Spaniards whom he had left there, amounting to thirty-six in number, had been put to death by the natives in revenge for the insults and outrage which they had committed. After tracing out the plan of a town in a large plain near a spacious bay, and giving it the name of Isabella, in honour of his patroness, the queen of Castile, and appointed his brother to preside as deputy governor in his absence, Columbus, on the 24th of April, 1494, sailed with one ship and two small barks, to make further discoveries in the seas. In this voyage he was employed five months, and fell in with many small islands on the coast of Cuba, but none of any importance except the island of Jamaica.

Soon after his return to Hispaniola, he resolved to make war with the Indians, who amounted to 100,000 men; they having experienced every lawless act of violence from their invaders, were rendered extremely inveterate, and thirsting for revenge, a disposition which appears to have been foreign to their natures. Having collected his whole force, he attacked them by night, while they were assembled on a wide plain, and obtained a most decisive victory, without the loss of a single man on his part. The effect of cannon and fire arms, the noise of which was appalling, employed against a numerous body of Indians, closely drawn together, was in the highest degree destructive. Columbus had brought over with him a small body of cavalry.

The Indians, who had never before seen such a creature, imagined the Spanish horses to be rational beings, and that each, with its rider, formed but one animal; they

INTRODUCTION.

were astonished at their speed, and considered their impetuosity and strength as irresistible. Numbers were slain, and many made prisoners, who were immediately consigned to slavery.

At the departure of Columbus from Spain, he was appointed governor of the new world; but by false representations of his enemies, the king was persuaded to appoint another in his place. The king also gave orders that Columbus should be seized and sent to Spain; this was executed, and the heroic Columbus returned to Spain in irons. He was set at liberty by the king on his arrival, but never recovered his authority. After his return from his fourth voyage, finding Isabella, his patroness, dead, he sunk beneath his misfortunes, and died May 20th, 1506, in the seventieth year of his age.

In 1497, John Cabot and his son commenced a voyage of discovery, and on the 24th of June discovered the island of Newfoundland, which they gave the name of *Prima Vista*. Leaving this, they fell in with a small island, which they called *St. Johns*. The French attempted no discoveries until 1524. In 1584, Sir Walter Raleigh, under commission of Queen Elizabeth, arrived in America, entered Pamlico Sound, now in North Carolina, and sailed thence to Roanoke; of this country he took possession, and on his return to England gave so splendid a description of it, that Queen Elizabeth bestowed upon it the name of *Virginia*, in allusion to her being unmarried.

In 1602, Bartholomew Gosnold discovered some part of New-England. He first touched on its eastern coast, in about 43 degrees of north latitude; he made some discoveries of the adjacent ports, and gave them the name of *Cape Cod*, and *Martha's Vineyard*.

In 1603, the French made some small discoveries, and began to settle at *Port Royal*, on the *Bay of Funda*.

In 1608, Henry Hudson discovered *Long Island*; he also discovered and gave name to *Hudson River*, which retains this name to the present time.

NOTE.—The birth, parentage, and the early education of Columbus has been extracted from Washington Irving's "*Life of Columbus*."

SETTLEMENT OF JAMESTOWN, in Virginia. The first permanent English settlement in North America, commenced by 105 persons, 13th of May, 1607. See page 13.

UNIVERSAL HISTORY

OF THE

UNITED STATES.

PART FIRST.

CHAPTER II.

From the settlement of Jamestown to the embarkation of the Plymouth Company.

THE discovery of America by Columbus, gave a new impulse to that bold spirit of adventure which characterized the hardy age in which he lived. Although several men of rank and fortune were concerned in the companies which had been formed in England for colonising America, their funds appear to have been very limited and their first efforts were extremely feeble. The first expedition for the southern colony consisted of one vessel of 100 tons, and two barks, with 105 men, destined to remain in the country. The command of this small fleet was given to Captain Newport, who sailed from the Thames the 19th of December, 1606. At the time his instructions were given, three packages, sealed with the seal of the council, were delivered, one to Captain Newport, one to Captain Bartholomew Gosnald, and the third to Captain John Ratcliffe, containing the names of the council for the colony.

They were directed not to open these packages within 24 hours after their arrival on the coast of Virginia, and the names of his majesty's council were then to be proclaimed. The council were then to proceed in the choice of a president, who should have two votes. To this singular and unaccountable concealment, have been in a great degree attributed the dissensions which distracted the colonists on their passage, and which afterwards considerably impeded the progress of their infant settlement. Newport

whose place of destination was Roanoke, took the circuitous route by the West India islands, and had a long passage of four months. The reckoning had been out for three days, without perceiving land; and serious propositions were made for returning to England; when they were overtaken by a storm, which fortunately drove them to the mouth of the Chesapeake.

On the 26th of April, 1607, they discerned Cape Henry, and soon after Cape Charles. Impatient to land a party of about 30 men went on shore at Cape Henry, but they were immediately attacked by the natives, who considered them as enemies, and in the skirmish which ensued, several were wounded on both sides. The first employment of the colonists, was to explore the adjacent country, with the appearance of which they were greatly delighted, and to select a spot on which their settlement should be made. They proceeded up a large, beautiful river, called by the natives Powhattan, and to which they gave the name of James; on a peninsula, on the north side of which they immediately agreed to make the first establishment of their colony.

This place, as well as the river, they named after their king, and called it Jamestown; there they debarked on the 13th of May, and the sealed packets being opened, Mr. Wingfield was, by the council, elected their president; but under frivolous and unjustifiable pretexts, they excluded Smith from taking his seat among them—John Smith, whose courage and talents seem to have excited their envy, and who on the passage, had been imprisoned on the improbable and unsupportable charge of intending to murder the council, usurp the government, and make himself king of Virginia.

The colonists soon found themselves embroiled with the Indians, who attacked them suddenly, while at work; but were frightened by the fire from the ship, and in a short time, a temporary accommodation with them was effected. Although Newport was named of the council, he was ordered to return with the vessel to England, and the time of his departure approached. The accusers of Smith, affecting a degree of humanity which they did not feel, proposed that he should return with Newport, instead of

being prosecuted in Virginia; but with the pride of conscious innocence, he demanded his trial, and being honourably acquitted, took his seat in the council. About the 15th of June, Newport sailed for England, leaving behind him one bark, and about 160 persons, the only English then on the continent of America.

Thus, about one hundred and ten years after this continent had been discovered by Cabot, and 22 years after a colony had been conducted to Roanoke by Sir Richard Grenville, the English possessions in America, designed soon to become a mighty empire, were limited to a peninsula of a few thousand acres of land, held by a small body of men, who with difficulty maintained themselves against the paltry tribes which surrounded them, and looked in a great measure to the other side of the Atlantic for the bread on which they were to subsist. The stock of provisions for the colony had been very improvidentially laid in; it was entirely inadequate to their wants, and in addition to this original error, it had sustained great damage in the holds of their vessels, during their long passage.

On the departure of Newport, (during whose stay they managed to partake of the superfluity of sailors,) they were reduced to the necessity of subsisting on the distributions from the public stores. These were, at the same time, scanty and unwholesome. They did not amount to more per man than a pint of worm eaten wheat, and barley boiled in a common kettle. This wretched food increased the malignity of the diseases generated by a hot, and, at that time, (the country being entirely uncleared and undrained,) a damp climate, among men exposed, from their situation, to all its rigours. Before the month of September, 50 of the company, and among them Bartholomew Gosnald, who had originated the expedition, and so much contributed towards its being carried on, were buried.

This scene of distress was heightened by internal dissension. The president was charged with having embezzled the best stores of the colony, and of feasting at his private table with beef and bread, then deemed luxuries of the highest order, while famine and death devoured his fellow adventurers. No crime, in the public opinion, could have been more atrocious. In addition to this, he

was detected in an attempt to escape from them and their calamities, in the bark which had been left by Newport. The general indignation could no longer be restrained. He was deposed, and Ratcliffe chosen to succeed him. Misfortune is not unfrequently the parent of moderation and reflection, and this state of misery produced a system of conduct towards the neighbouring Indians, which, for the moment, disarmed their resentment, and induced them to bring in such supplies as the country at that season afforded, and thereby preserved the remnant of the colony. It produced another effect, not less important. Their sense of imminent and common danger, called forth and compelled submission to those talents which were fitted to the exigence, and best calculated to extricate them from the difficulties by which they were surrounded.

Captain Smith, who had been imprisoned and expelled from the council by the envy of those who felt and hated his superiority, and who, after evincing his innocence, had with difficulty been admitted to the station assigned, preserved his health unimpaired, his spirits unbroken, and his judgment unclouded, amidst this general misery and dejection. In him, by common consent, all actual authority was placed, and he, by his own example, soon gave energy and efficiency to others in the execution of his commands.

He immediately erected, at Jamestown, such rude fortifications as were necessary to resist the sudden attack of the savages, and, with great labour, in which he always took the lead, completed the construction of such dwellings as could shelter the people from the weather; contributed to restore and preserve their health, while his accommodation gave place to all others. In the season of gathering corn, which, with the Indians, is the season of plenty, putting himself at the head of small parties, he penetrated into the country, and, by presents and caresses to those that were well disposed, and attacking with open force, and defeating those who were hostile, he obtained for his countrymen the most abundant supplies. While thus actively and usefully employed abroad, he was not permitted to withdraw his attention from the domestic concerns of the colony. However unfit men may be for

command, there are few examples of their descending willingly from exalted stations once filled by them, and it is not wonderful that the late president saw with displeasure another placed above him.

As unworthy minds most readily devise unworthy means, he sought, by intriguing with the factious, and fomenting their discontents, to regain his lost authority; and when their attempts were disconcerted, plans were laid, first by Wingfield and Kendal, and afterwards by the president himself, in conjunction with Martin, the only remaining member of the council, except Smith, to escape in the bark, and thus abandon the country. The vigilance of Smith detected all these machinations, and his vigour defeated them. The hope was now indulged of preserving the colony in quiet and plenty, until supplies could be received from England, with the ships which were expected in the spring. This hope was, in a considerable degree, defeated, by an event which threatened, at first, the most disastrous consequences.

In an attempt to explore the head of Chickahominy river, Smith was discovered, and attacked by a numerous body of Indians, and, in endeavouring to make his escape, after a most gallant defence, his attention being directed to the enemy, whom he still fought in retreating, he sunk up to his neck in a swamp, and was obliged to surrender. Still retaining his presence of mind, he showed them a mariner's compass, at which, especially at the playing of the needle, and the impossibility of touching it, although they saw it so distinctly, they were greatly astonished: and he amused them with so many surprising stories of its qualities, as to inspire them with a degree of veneration, which prevented their executing their first design of killing him on the spot. They conducted him in triumph through several towns to the palace of Powhatan, the most potent king in the country.

There he was doomed to be put to death by laying his head upon a log, and beating his brains out with clubs. He was led to the place of execution, and his head bowed down for the purpose of death, when Pocahontas, the king's daughter, then about thirteen years of age, whose entreaties for his life had been ineffectual, rushed between

him and the executioner, and folding his head in her arms, and laying hers upon it, arrested the fatal blow. Her father was then prevailed on to spare his life, and after a great many savage ceremonies, he was sent back to Jamestown. On his arrival thither, having been absent seven weeks, he found the colony reduced to 38 persons, most of whom seemed determined to abandon the country, which appeared to them so unfavourable to human life. He was just in time to prevent the execution of this design. Alternately employing persuasions, threats, and even violence, he, at length, with much hazard to himself, induced the majority to relinquish the intentions they had formed, and then turning the guns of the fort on the bark, on board of which were the most determined, compelled her to remain, or sink in the river.

By judicious regulation of their intercourse with the Indians, among whom Smith was now in high repute, he preserved plenty in the colony until the arrival of two vessels, which had been despatched from England under the command of Captain Newport, with a supply of provisions, instruments of husbandry, and with a reinforcement of 120 persons; consisting of many gentlemen, a few labourers, and several refiners, goldsmiths, and jewelers. The joy of the colony on receiving this accession of force, and supply of provisions, was extreme. But the influence of Smith disappeared with the danger which had produced it, and an improvident relaxation of discipline, productive of the most pernicious consequences, succeeded to it. Among the unwise practices which they tolerated, an indiscriminate traffic with the natives was permitted, in the course of which some obtained for their commodities much better bargains than others, which inspired those who had been most hardly dealt by, and who thought themselves cheated, with resentment against the English generally, and a consequent thirst for revenge.

About this time was found, washed down by a small stream of water, back of Jamestown, a glittering earth, which, by the colonists, was mistaken for gold dust. All that raging thirst for gold which accompanied the first Europeans who visited the American continent, seemed re-excited by this incident. Mr. Stith, in his history, says

there was nothing thought of but to dig gold, wash gold, refine gold, and load gold. And, notwithstanding Captain Smith's warm and judicious representations, how absurd it was to neglect all other things of immediate use and necessity, to load such a drunken ship with gilded dust yet was he overruled, and her returns were made with a parcel of glittering dirt, which is to be found in various parts of the country, and which they very sanguinely concluded to be gold dust.

One vessel returned in the spring of 1608, the other the 2d of June, laden, one with dust, the other with cedar. This is the first remittance ever made from America by an English colony. The effects of this fatal delusion, were such as might have been foreseen, and were soon felt. The colony began to suffer the same distress from scarcity of food, which had before brought it to the brink of ruin. The researches of the English settlers had not yet extended beyond the countries adjacent to James River. Smith had formed the bold design of exploring the great bay of Chesapeake, examining the mighty rivers which empty into it, opening an entrance with the nations inhabiting them, and acquiring a knowledge of the state of their cultivation and population.

This hardy enterprise he undertook, accompanied by Doctor Russell, in an open boat of about three tons burthen, and with a crew of 13 men. On the 2d of June, he fell down the river, in company with the last of Newport's two vessels, and parted with her at the Capes. Beginning his survey at Cape Charles, he examined with immense fatigue and danger, every river, inlet, and bay, on both sides of the Chesapeake, as far as the mouth of the Rappahannock, from whence, their provisions being exhausted, he returned to Jamestown. He reached the place on the 21st July, and found the colony in the utmost confusion and disorder. Those who had arrived last, with Newport were all sick, and general scarcity prevailed; an universal discontent with the president, whom they charged with riotously consuming the stores, and unnecessarily fatiguing the people, with building a house of pleasure for himself in the woods.

The seasonable arrival of Smith, prevented their fury

from breaking out in acts of personal violence. Their views were extended, and their spirits revived, by the accounts he gave of his discovery. They contented themselves with deposing their president, and Smith was urged, but refused, to succeed him.

Having made, in three days, arrangements for obtaining regular supplies, and for the government of the colony, his firm friend, Mr. Scrivner, was appointed vice president, and on the 14th of July, he again set out, with 12 men, to complete his discoveries.

From this voyage, he returned on the 7th of September. He had adventured as far as the River Susquehannah, and visited all the countries on both sides of the river; he entered most of the large creeks, and sailed up many of the great rivers to their falls.

When we consider that he sailed above 300 miles in an open boat, when we contemplate the dangers and the hardships he encountered, and the fortitude, courage, and patience, with which he met them; when we reflect on the useful and important additions which he made to the stock of knowledge respecting America, then possessed by his countrymen, we shall not hesitate to say that few voyages of discovery, undertaken at any time, reflect more honour on those engaged in them, than this does on Captain Smith. It may not be entirely unworthy of remark, that about the bottom of the bay, Smith went with a party of Indians from St. Lawrence, coming to war with those of that neighbourhood; and that he found among Indians on the Susquehannah, hatchets obtained originally from the French in Canada.

On the 10th of September, immediately after his return from his expedition, he was chosen president by the council, and accepted the office.

Soon after Newport arrived with an additional supply of inhabitants; among whom were the two first females who had ventured into the country; but he came without provisions. The distinguished, judicious, and vigorous administration of the president, however, supplied their wants, and restrained the turbulent. Encouraged by his example, coerced by his authority, a spirit of industry and subordination appeared to be created in the colony, which

was the parent of plenty and peace. In the mean time, the company in England became excessively dissatisfied with their property in America. They had calculated on discovering a passage to the south sea, and mines of the precious metals, which might afford to individuals the same sudden accumulation of wealth which had been acquired by the Spaniards in the south. In all their hopes they had been grievously disappointed, and had as yet received scarcely any advantage for the heavy expenses they had incurred; yet hope did not altogether forsake them, and they still indulged in golden dreams of future wealth.

On the 23d of May, 1609, a new charter was granted them, some of the first nobility, and gentry of the country, and most of the companies of London, with a numerous body of merchants and tradesmen, were now added to the former adventurers, and they were all incorporated, by the name of the Treasurer and Company of Adventurers of the city of London, for the first colony in Virginia. To them was granted, as their property, the lands extending from Cape or Point Comfort along the sea coast, 200 miles northward, and from the same point along the sea coast 200 miles southward.

The corporation was authorized to own, under its common seal, particular portions of these lands to subjects or denizens, on such conditions as might promote the intentions of the grant. The powers of the president and council in Virginia were abrogated, and a new council in England was established and ordained in the charter, with power to the company to fill all vacancies therein by election. This council was empowered to appoint and renew all officers for the colony, and to make all ordinances for its government, provided they be not contrary to the laws of England.

License was given to transport all persons that were willing, and to export merchandise free from custom to Virginia, for seven years. There was also granted, for twenty-one years, freedom from all subsidies in Virginia, and from all impositions on importations and exportations, from or to any of the king's dominions, except only the five pounds in the hundred due for custom. The company

being now enlarged, was enabled to take more efficient measures than heretofore for the settlement of the country; they soon fitted out nine ships with 500 emigrants, and such supplies as were deemed necessary for them. Lord Delawar was constituted governor and captain general for life, and several other high sounding and useless offices were created. The direction of the expedition was again given to Captain Newport, George Somers, and Thomas Gates. Power was severally granted to govern the colony until the arrival of Lord Delawar.

With singular indiscretion, the council omitted to establish precedence among these gentlemen, and being totally unable to settle this point between themselves, they agreed to embark on board of the same vessel, and to be companions during the voyage. They were parted from the rest of the fleet in a storm, and driven on Bermudas, having on board 150 men, a considerable portion of the provisions, and the new commission and instructions of the council. The residue of the squadron arrived safe in Virginia.

The great part of the new company consisted of unruly sparks packed off by their friends to escape worse destinies at home, and the rest chiefly made up of poor gentlemen, broken tradesmen, rakes and libertines, footmen, and such others as were more ruinous to the commonwealth, than to help to raise or maintain it. They assumed to themselves the power of disposing of the government, and conferred it sometimes on one, and sometimes on another. To-day the old commission must rule, to-morrow the new, and next day neither. So all was anarchy and distraction.

The judgment of Smith was suspended but for a short time. He soon determined that his own authority was not legally revoked until the arrival of the new commission, and, therefore, resolved to continue its exercise. He boldly imprisoned the chief promoter of the sedition, and thereby restored for a time regularity and obedience. Having effected this, he detached 100 persons to the falls of James River, under the command of West, and the same number to Nansemond, under the command of Martin. These settlements were conducted with so little

judgment, that they soon converted all the neighbouring Indians into enemies, had several parties cut off, and found themselves in need of the support and direction of Smith. These were always afforded, until a melancholy accident deprived the colony of the aid of a man, whose talents had more than once rescued it from that desperate condition into which folly and vice had plunged it.

Returning from the company at the falls of James River, his powder bag, while he was asleep in the boat, took fire; he was wounded so as to be confined to his bed. Being thus wounded, and unable to obtain the aid of a surgeon in the colony, he determined to return to England, for which place he embarked about the beginning of October. At his departure the colony consisted of about 500 inhabitants; they were furnished with 3 ships, 7 boats, 10 weeks' provisions in the public store, 6 mares and a horse, a large stock of hogs and poultry, with some sheep and goats; utensils for agriculture, nets for fishing, 100 trained and expert soldiers, well acquainted with the Indians, their language and habitations; 24 pieces of ordnance, and three hundred muskets, with a sufficient quantity of other arms and ammunition.

The present fair prospect was soon blasted. The Indians understood that the man whose conduct and vigour they had so often experienced, and so much dreaded, no longer remained in the country; they fell upon them. Captains West and Martin having lost their boats, and nearly half of their men, were driven back to Jamestown; the stock of provisions was lavishly wasted, and a famine, the most dreadful with which they had ever been afflicted, raged among them. After devouring the skins of their horses, and the Indians they had killed, the survivors fed on those of their companions who had sunk under such accumulated calamities. This period was long remembered by the name of the *Starving Time*.

In six months the colony was reduced to 60 persons, who were so feeble and dejected that they could not survive ten days longer. In this calamitous state, they were relieved by Thomas Gates, George Somers, and Captain Newport, who arrived from Bermuda 24th of May, 1610. It was immediately determined to abandon the country;

and for this purpose the wretched remnant of the colony embarked on board the vessel just arrived from Bermuda, and set sail for England. None dropped a tear, because none had enjoyed one day of happiness. But they met Lord Delawar in the river, with three ships, and a recruit of new settlers and persons from England, who prevailed on them to return, and, on the 10th of June, re-settled them at Jamestown.

On the 10th of May, 1611, Sir Thomas Dale, who had been appointed to the government, arrived with fresh supplies of men and provisions, and found the colony relapsing into its former state of idleness and penury. It required all the authority of the new governor to maintain public order, and to compel the idle and dissolute to labour. Some conspiracies having been detected, he proclaimed martial law, and instantly executed it, by punishing the most guilty. These severities, which, in the ordinary state of society, would not, and ought not to have been submitted to, were then deemed necessary, and are spoken of as having probably saved the settlement.

In the beginning of August, Sir Thomas Gates, who had been appointed to succeed Thomas Dale, arrived with six ships, and a considerable supply of men and provisions. The colony being now greatly strengthened, began to extend itself up the James River, and several new settlements were made. In March, 1612, a new charter was issued, granting to the treasurer and company all the islands situate in the ocean, within three hundred leagues of the coast of Virginia.

It was ordained that four general courts of adventurers should be holden annually, for the determination of affairs of importance, and weekly meetings were appointed for the transaction of common business.

To promote the settlement, which had already cost such considerable sums, license was given to open lotteries in any part of England. These lotteries, which were the first ever drawn in England, brought twenty-nine thousand pounds into the treasury of the company. Captain Argal arrived from England with two vessels, and was sent round to the Potomac, for a cargo of corn. Here he understood that Pocahontas, who had saved the life of

Smith, and ever had been steadfast in her attachments to the English, having absented herself from her father's house, now lay concealed.

By bribing some of those in whom she had confided, Captain Argal prevailed on her to come on board his vessel, where she was detained respectfully, and brought to Jamestown. His motive was, the hope that the possession of Pocahontas would give the English an ascendancy over her father, Powhatan. In this, however, he was disappointed. Powhatan offered corn and friendship, if they would first restore his daughter, but would come to no terms until reparation was made for what he resented, as an act of unhandsome treachery.

During her detention at Jamestown, she made an impression on the heart of Mr. Rolfe, a young gentleman of estimation in the colony, who also succeeded in gaining her affections. They were married, with the consent of Powhatan, who ever after continued to be a sincere friend to the English. This led to a treaty with the Chicchahominies, a brave and powerful tribe, who submitted to the English, and became their tributaries. In 1613, Sir Thomas Dale divided a considerable portion of the lands into lots of three acres each, and granted one of these to each individual in full propriety.

Although they were still required to devote a great portion of their labour to the public, yet a sudden change was made in the appearance and habits of the colony. Industry advanced with rapid strides, and the colonists were no more fearful of wanting bread, either for themselves or the emigrants, who came annually from England. Early in the year 1614, Sir Thomas Gates returned to England, leaving the government again with Sir Thomas Dale. In 1615, fifty acres of land were allotted to each individual, which was actually laid off and delivered to the persons having titles to them, who were permitted to exercise over them, in such a manner as was agreeable to themselves, all the rights of ownership. About the same time, tobacco was first cultivated in Virginia.

This plant was detested by the king, who used all his influence to prevent its use. He even wrote a pamphlet against it, which he styled the counter blast. It was dis-

countenanced by the leading members of parliament, and also by the company, who issued edicts against its cultivation. And, although on a first experiment, it was unpleasant in its taste, and disagreeable in its effects, it surmounted all difficulties, and has, by an unaccountable caprice, been brought into general use, and become one of the most considerable staples of America.

In the spring of 1616, Sir Thomas Dale sailed for England, having placed the government in the hands of George Yeardly, his deputy, who after a very lax administration of one year, was succeeded, in May, 1617, by Captain Argal, who had been appointed deputy governor by the company.

He was a man of great talents and energy of mind, but selfish, haughty, and tyrannical. He provided with ability for the wants of the colony. Martial law was continued during a season of peace; and Mr. Brewster, who was tried under this arbitrary system, for contemptuous words spoken against the governor, was sentenced to suffer death. A respite of execution was with difficulty obtained, and on an appeal to the council in England, the sentence was reversed. While martial law was, according to Stith, the common law of the land, the deputy governor seems to have been the sole legislator. His edicts mark the severity of his rule, but some of them evince an attention to the public safety.

He ordered, that merchandise should be sold at the advance price of 25 per cent., and tobacco taken in payment at the rate of three shillings a pound, under the penalty of three year's servitude to the company; that no person should traffic with the Indians, or teach them the use of fire arms, under pain of death; that no person should hunt deer or hogs without leave from the governor; that no person should shoot, unless in his own defence, until a new supply of ammunition arrived, on pain of a year's personal service; that no one should go on board the ships without the governor's leave; that every person should go to church on Sundays, under the penalty of slavery during that present week, for the first offence; a month for the second, and a year for the third.

The rigour of this administration necessarily excited

much discontent, and the complaints of the Virginians at length made their way to the company. Lord Delawar, being now dead, Mr. Yearly was appointed captain-general, with instructions to examine with attention the wants of the people, and to redress them.

The new governor arrived in April, 1619, and soon after, to the inexpressible joy of the inhabitants, declared his intentions to convoke a colonial assembly. This is an important era in the history of Virginia. Heretofore, all legislative authority had been exercised, either by the corporation in England, or by their officers in this country. The people, either personally or by their representatives, had no voice in the government of themselves, and their most important concerns were decided by persons unacquainted with their situation, and always possessing interests different from theirs.

This first assembly met at Jamestown on the 19th of June, 1619. The colony was not then divided into counties, and the members were elected by the different boroughs, amounting to seven in number. The assembly, composed of the governor, the council, and burgesses, met together in one apartment, and there debated all matters thought conducive to the general welfare. The laws then enacted, which, it is believed, are no longer extant, were transmitted to England for the approbation of the treasurer and company, and were said to have been judiciously formed.

The emigrations from England continued to be very considerable, and were made at great expense to the company; but as yet few females had ever crossed the Atlantic. Men without wives could not contemplate Virginia as a place of permanent residence, and proposed, after amassing some wealth, to return to their native land. To put an end to a mode of thinking in its effects so ruinous to the colony, it was proposed to send out 100 maids as wives for the colony; 90 young girls were transported in the beginning of the year 1620, and 60 more in the subsequent year. They were immediately disposed of to the young planters.

The price of a wife was estimated first at one hundred, and afterwards at one hundred and fifty pounds of tobacco

then selling at three shillings per pound; and a debt so contracted was made of greater dignity than any other. The education of the children was likewise attended to, and several steps were taken towards founding a college, afterwards completely established by William and Mary. About the same time, the company received orders from the king to transport to Virginia 100 idle and dissolute persons, then in the custody of the Knight Marshal. These men, dispersed through the colony, became a useful and acceptable addition of labourers, and were the first convicts transported to America.

CHAPTER III.

From the embarkation of the Plymouth Company to the close of the Pequot War.

WE have seen with what slow and difficult steps the first, or southern colony, although supported by individuals of great wealth and influence in the nation, advanced to a firm and secure establishment. Let us now employ our attention in viewing the establishment of the Plymouth Company. King James first granted Letters Patent to this company, in 1606, to possess all the lands in America lying between 34 and 45 degrees of north latitude. They applied for leave to go under the royal sanction, but were refused.

At length they obtained permission from the Virginia company to make a settlement near the mouth of Hudson's River. It was resolved that part of the congregation should remove first, and the remaining part, with their pastor, after the new settlement had commenced. This produced a scene at parting not to be described. They took their leave of one another, which proved to be their last leave, with many of them. They sailed from Holland to Southampton, in England, where they met the other ships, and their friends who were to accompany them from England, in July, 1620.

On the fifth of August they sailed from Southampton,

but, on account of bad weather, and the leakiness of one of their vessels, they were obliged twice to put back. The poorer vessel they were compelled to leave, while as many as could be accommodated, one hundred and one persons of the adventurers, entered on board the other ship, and took their last leave of the land of their fathers on the sixth of September. Called to go out into a place which they should after receive for an inheritance, they obeyed; and they went out, not knowing whither they went.

After a tedious voyage, safely housed in the ark which God in his providence had directed them to prepare, protected by Him who directs the storm, on the tenth of November they arrived at Cape Cod. The Dutch, intending to keep Hudson's River, had bribed the ship master to carry these adventurers so far northward, that they should not find their intended place of residence. They had found land, and it was too late in the season to put to sea again; they were in a good harbour, but on a most barren and inhospitable shore.

On their arrival, they stepped upon the strand, and with bended knees, gave thanks to God, who had preserved their number entire, and brought them in safety to these unhallowed shores. Being without the limits of their patent, as to civil government, they were in a state of nature. They therefore procured and signed a civil compact, by which they severally bound themselves to be obedient to all ordinances made by the body, acknowledging the King of Great Britain to be their lawful sovereign.

They say, in the preamble, "Having undertaken, for the glory of God, and advancement of the Christian faith, and honour of our king and country, a voyage, to plant the first colony in the northern parts of Virginia, do, by these presents," &c. This instrument was executed on board their ship, on the eleventh of November. Mr. John Carver, a man of distinguished abilities and eminent piety, was chosen their governor.

The prospects now before them, were such as to appal any other than our fathers. In a most howling wilderness, inhabited by pagan savages and wild beasts, a dreary winter approaching, no shelter from the tempest, and

as yet, no place of abode. They had one resting place, and that was all. Their trust was in Him who hath said to his chosen, *The eternal God is thy refuge, and underneath are the everlasting arms; and he shall thrust out the enemy from before thee, and shall say, destroy them.*

After several unsuccessful attempts to find a convenient place for their residence, a party sent out for discovery, entered the harbour of Plymouth. In a severe storm, on a December night, having, with their little bark, narrowly escaped a shipwreck, they were cast upon an island in the harbour. This was on Friday night. The next day, they dried their clothes, concluding to remain on this little island till after the Sabbath. This little band, about twenty in number, observed the next day as a Sabbath, which was the first Sabbath ever observed in a religious manner on the New-England shore.

Having examined the harbour, they returned to the ship, which weighed anchor, and brought their consecrated cargo in safety. Here these pious pilgrims landed on the twenty-second of December, 1620. They called the place Plymouth, the name of the town from which they last sailed in England. They now had a country and a home, but they had a better country on high.

They had now to contend with the inclement seasons, with innumerable privations, in a constant fear of a savage foe. But God had prepared their way before them. A desolating plague, which prevailed among the natives about three years before, had nearly depopulated those parts of the country. On this account, they received very little molestation from the savages for many years. Had they been carried to Hudson's River, according to their intention, where the savages were numerous, there is much reason to believe the little colony would have been cut off. Infinite wisdom directed their course to their prepared habitation. We have heard with our ears, O God, our fathers have told us, how thou didst drive out the heathen with thy hand, and planted them.

The severities of the season, their unwholesome food, and their incessant labours, brought upon this little flock a general and very mortal sickness, so that forty-six of their number died before the opening of the ensuing

spring. Of those who survived, the most had been severely sick. Who can contemplate this little band, in an uncultivated wilderness, with no promise of support from their mother country, exposed to the inclement skies of a dreary winter, with scanty supplies of food, utterly unskilled and destitute of the means for the cultivation of a new country, with no security for future harvests; surrounded with a savage enemy, whose seats and prowess they could not know; visited with a raging disease, committing, at times, two or three in a day to the grave; of the living, scarcely enough who had strength to perform the rites of sepulture; without despondency, firmly determined to abide the just appointments of Heaven—and not admire a virtue which the religion of the Lord Jesus alone can furnish, and a patriotism to which the canonized heroes of Rome could never attain?

Had their object been to obtain a property for themselves, and for their posterity, or to obtain a name among the heroes of enterprise, they had sunk under their sufferings. Their souls were strengthened with other prospects. They confided in the wisdom of Heaven; they firmly believed that the Most High would here plant and maintain his church; that he would make the American wilderness like Eden, and her desert like the garden of the Lord.

Buoyed up by faith, strengthened by the promises, obstacles vanished before them. They knew God had often led his church into the wilderness, but he had never forsaken her. He raised up the righteous man from the east, brought him to a strange country, the Canaanite was then in the land, but he gave them as the dust to his sword, and as driven stubble to his bow.

On the fifth of April, after their arrival, the Plymouth Company were called to mourn the loss of their excellent governor, and a deacon of the church, Mr. Carver. Mr. Bradford, a gentleman of distinguished worth, was chosen to succeed him, and, excepting four years, he was annually elected to the office till his death, in 1657. A little before the death of Mr. Carver, the Indian Sachem, Massasoit, came into Plymouth in a friendly manner, and entered into a treaty of friendship with the colony, which

he observed inviolably till his death. He was father of the famous Sachem, King Philip.

After the first desolating sickness, the people of Plymouth were, generally, very healthy, and the most of the first planters who survived that epidemic, lived to old age. Their privations, however, and their sufferings, inseparable from the circumstances of their situation, were great in the extreme. Their property was, principally, held in common stock for the support of the whole. And the wants of the few first years, consumed most of their stores. Through fear of the natives, having received some threatening intimations from some of the tribes, they were necessitated to erect a fort, to empale their whole village, and to keep a constant guard.

In their excursions to find a proper place for settlement, while their ship lay at the cape, they found about ten bushels of Indian corn which had been buried, for which they afterwards paid the owners, which helped to preserve their lives the first winter, and afford them seed for planting in the ensuing spring. Some friendly Indians taught them the manner of raising their corn, but their crop was very unequal to their necessities. Mr. Hutchinson is of opinion, that no English grain was raised in the colony previous to the year 1633, when a few ears of rye were produced.

The first domestic cattle were brought to the colony in 1624; previous to which they had none for milk or labour. The most credible historians affirm, that these pilgrims subsisted, in repeated instances, for days and weeks together, without bread, feeding upon the wild nuts of the woods, and shell fish. Their difficulties for clothing were equally great. Some of the ancient writers intimate, that the great mortality in the first winter appears to have been the means, under a wise Providence, of preserving the colony from perishing by famine.

The second summer after their arrival, the settlement was threatened with a famine by a severe drought. From the third week in May, to the middle of July, there was no rain. Their corn, for which they had made their utmost exertions, withered under the heat of a scorching sun; the greater part of it appeared irrecoverably lost. The

Indian Friendship.—Page 32.

Indians, seeing their prospects, observed they would soon be subdued by famine, when they should find them an easy prey.

A public fast was appointed and observed with great solemnity. The morning, and most of the day, was clear and hot, but, towards evening, the clouds collected, and like the gracious influences of God, the rain descended in moderate, yet copious showers. This revived their expiring crop, and produced a plentiful harvest. After which, they observed a day of public thanksgiving. I believe this to be the origin of our annual thanksgivings. This event made an astonishing impression on the minds of the natives, who saw and acknowledged that the God of Christians was great, and good, and a hearer of prayer.*

In the autumn of 1621, the plantation received an accession of settlers of about thirty-five, of their friends from Holland. In the year 1625, their venerable and beloved pastor, the Rev. Mr. Robinson, died at Leyden, in the fiftieth year of his age. He was thus prevented from ever seeing his much loved American church. After his death, the most of his congregation came over to Plymouth.

The planters who first came to Plymouth were accompanied by Mr. William Brewster, a ruling elder in the church, who supplied, in a good degree, the absence of their pastor. He was a man of abilities and learning having been liberally educated at the University of Cambridge, and of great piety. Being an able and useful preacher, he served the congregation in that capacity the greater part of the time till his death, about twenty-three years after the first settlement. The congregation, however, enjoyed the labours of other ministers during this period.

This little colony continued for many years in harmony, and were, perhaps, as eminent as any people which have appeared in modern time, for continuing steadfastly in the apostles' doctrine and fellowship, and in breaking of bread, and in prayers.

In 1621, the Virginia company passed an ordinance

* See Morton, and others.

establishing the constitution of the colony. This provided, that henceforth there should be two supreme councils in Virginia, the one to be called the council of state, to be appointed and displaced by the treasurer and company, and to assist the governor with advice on executive subjects; the other to be denominated the general assembly, and to consist of the governor, the council, and two burgesses, to be chosen for the present by the inhabitants of every town.

The assembly was empowered to consult and determine on matters respecting the public weal. It was declared, that no acts passed by the assembly should be in force until confirmed by the general court in England, and the ratification returned under its seal, and that, on the other hand, no order of the general court should bind the colony until assented to by the assembly. In 1622, the controversy which had for some time existed between the crown and the company, concerning the importation of tobacco, was at length adjusted by amicable agreement.

The king had demanded high duties on that article, while he admitted its importation from the dominions of Spain, and had also restrained the company from transporting it directly from Virginia to their warehouses in Holland, to which expedient his exactions had driven them. It was now agreed, that they should enjoy the sole right of importing that commodity into the kingdom, for which they should pay a duty of nine pence per pound, in lieu of all charges, and that the whole productions of the colony should be brought to England. The industry of the colony had now greatly increased. At peace with the Indians, their settlements had extended not only along the banks of James and York rivers, but to the Rappahannoc, and even to the Potowmac.

It now became extremely inconvenient to bring all causes to Jamestown before the governor and council. Thus originated the present county courts of Virginia. In this year the cup of prosperity, of which the colony now began to taste, was dashed from their lips, by an event which shook to its foundation, and nearly destroyed the colony. In the year 1618, Powhatan, the most pow

erful of the Indian kings in Virginia, who, after the marriage of his daughter to Mr. Rolfe, had remained faithful to the English, departed this life, and was succeeded by Opechancanough, a bold and cunning chief, remarkable for his jealousy and hatred of the new settlers; but for a considerable time the general peace remained undisturbed.

The Indians were furnished with fire arms, and taught the use of them; they were admitted at all times freely into the habitations of the English, as harmless visitants; were fed at their tables, and lodged in their chambers. The 22d of March, was designated as the day on which all the English were to be at the same instant attacked. Thus, in one hour, and almost at the same instant, fell 347 men, women, and children. The massacre would have been still greater, had not information been given the preceding night, to a Mr. Pace, by an Indian, who disclosed to him the plot.—He immediately carried the intelligence to Jamestown, and the alarm was given to some of the nearest settlements, which were thereby saved.

As soon as intelligence reached England of these calamities of the sufferers, relief was ordered. Arms from the tower were delivered to the treasurer and company, and several vessels were immediately despatched with articles for their relief. While the Virginians were mourning their losses, the Plymouth company began to experience the distress of famine. By the time their planting was finished, 1623, their provisions were so far exhausted, that they had neither bread nor corn, for three or four months. A drought continued from May until some time in July. Under these afflictions, they appointed a day of fasting and prayer, to humble themselves before God.—But a plentiful harvest soon followed, which was noticed by a day of thanksgiving.

Mr. White, a non-conformist minister at Dorchester, who had prevented some few of his countrymen who had settled around the Bay at Massachusetts, from returning to England, by his assurances of procuring them relief and assistance, formed by great exertions an association of several gentlemen, who had imbibed puritanical opinions for the purpose of conducting thither a colony, and rea-

dering it an asylum from the persecution of his own persuasion. In prosecution of their views, a treaty was concluded with the council of Plymouth, for the purchase of part of New-England; and that corporation, in March, 1627, conveyed to Sir Henry Roswell, and others, all that part of New-England lying three miles to the south of Charles River, and three miles north of Merrimack River, and extending from the Atlantic to the south sea.

A small number of planters and servants were soon afterwards despatched under Endicot, a deep enthusiast, who, in September, 1628, laid the foundation of Salem the first permanent town in Massachusetts. In the year 1629, soon after the organization of the company, under the sanction of the royal charter, they resolved a second embarkation for their new colony, to support the expenses of which, it was resolved, that every person who should subscribe fifty pounds, should be entitled to two hundred acres of land, as the first dividend.

Five ships were provided for the purpose, and being laden with cattle and other necessaries, for the supply of the colony, with three hundred persons, men, women, and children, they sailed from the Isle of Wight, in May, and arrived at Salem in June, where they found Endicot, to whom they brought a confirmation of his commission as governor. The colony now consisted of three hundred persons, of whom one hundred removed and settled the town of Charlestown; and the remainder continued at Salem. Mr. Hugginson and Mr. Skelton, distinguished for their learning and piety, both of them, resolved to lend important services in laying the foundation of the American Church. These faithful servants of Christ cordially engaged in the great design; they embarked with the second party, and arrived at Salem in 1629.

Early in the following year, John Winthrop, who had been appointed governor, and Thomas Dudley, deputy governor, with one thousand five hundred persons, embarked on board of seventeen vessels, at an expense of upwards of twenty thousand pounds, and arrived at Salem in July, 1630. Dissatisfied with this situation, they explored the country in quest of a better station, and set

fled in many places around the bay ; and laid the foundation of several towns ; among others, of Boston.

On the arrival of Gov. Winthrop, in July, who was from that time to his death, the head and father of the colony, he found the plantation in a suffering state. In the preceding autumn, the colony contained about three hundred inhabitants ; eighty of them died, and a great part of the survivors were in a weak, sickly state. Their supply of corn was not sufficient for more than a fortnight, and their provisions nearly exhausted. Friday, February 6th, was appointed as a day of fasting and prayer ; but on the fifth of February, a ship arrived with provisions, and a day of thanksgiving was appointed by the governor.

The succeeding winter commenced in December, with great severity ; few of the houses which had been erected were comfortable. Unused to such severities of climate, the people suffered severely from the cold. Many of them died from the cold. On the opening of the spring of 1631, health was generally restored in the settlements ; but the colony was greatly impoverished. All the provisions that were brought from England, were purchased at a very high rate. By the length of the passage, and the severity of the winter, the greater part of their cattle died. The materials for building, and implements of labour, were obtained with great difficulty and expense. This year, great exertions were made for a crop of Indian corn, which was their whole dependance ; and it pleased God to give them an abundant harvest.

In the commencement of all the individual settlements, the planters were mindful of their great errand into the wilderness ; and directed their first exertions to the establishment of the church of Christ, and the institution of the gospel. The first church after the one at Salem was gathered at Charlestown, August 27th, 1630. Soon after this a church was organized at Dorchester. The next was at Boston, one at Roxbury, one at Lynn, and one at Watertown. In less than two years from the organization of the first church in Salem, there were in the colony seven churches, which were indeed golden candlesticks.

In 1633 came over Mr. Haynes, afterwards the first governor of Connecticut, and Mr. Stone, Mr. Hooker

and Mr. Cotton, three of the most eminent lights of the New-England churches.

On the 21st of February, an order was made by the king in council, to stop the ships at that time ready to sail, freighted with passengers and provisions for New-England. But this order seems never to have been strictly executed, as the emigrations still continued, without any sensible diminution.

Let me now call the attention of the reader to the settlement of Connecticut. The first discovery of the country of Connecticut River was made by the enterprising people of Plymouth, in 1633. The Plymouth people determined to undertake the enterprise at their own risk.—Preparations were made for erecting a trading house, and establishing a small company upon the river.

In the mean time, the master of a vessel from Massachusetts, who was trading at New-Netherlands, showed to the Dutch Governor the commission the English had to trade and settle in New-England; and that the king had granted these parts to his own subjects; he also desired that the Dutch would not build in Connecticut. The Dutch governor requested that the English would not settle in Connecticut until the affair should be determined between them. This appears to have been a piece of policy in the Dutch governor, to keep the English back until the Dutch had got a firm footing upon the river.

In September, several vessels went into Connecticut River to trade. John Oldham, from Dorchester, with a few men, travelled through Connecticut, to view the country and trade with the Indians. He found that the Indian hemp grew in great abundance in the meadows, and purchased a quantity of it, which, upon trial, was found to exceed that which grew in England. William Holmes, of Plymouth, with his company, having prepared the frame of a house, and boards and materials for covering it, immediately put them on board a vessel, and sailed for Connecticut.

When he came into the river, he found that the Dutch had got in before him, and made a light fort, and planted two pieces of cannon at the mouth of the little river since called Hartford. The Dutch forbade Holmes going up

the river—stood by their cannon, and ordered him to strike his colours, or they would fire upon him; but he was a man of spirit, and assured them that he had a commission from the governor of Plymouth, to go up the river, and go he would. They still threatened, but he proceeded—landed on the west side of the river, and erected his house a little below the mouth of the little river in Windsor.

This was the first house erected in Connecticut. It was covered with the utmost despatch, and well fortified. The Sachems, who were original owners of the soil, had been driven from this point of the country by the Pequots, and were now carried home on board Holmes' vessel. The Dutch, about the same time, erected a trading house at Hartford. It was with great difficulty that Holmes and his company erected and fortified their house, and kept it afterwards. The Dutch, before the Plymouth people took possession of the river, had been invited to trade with them at Connecticut; but when they found that they were preparing for a settlement there, they repented of the invitation, and did all in their power to prevent them.

On the 8th of June, the Dutch purchased about twenty acres of land at Hartford, of a Pequod captain. Of this the Dutch took possession; they protested against Holmes, the builder of the trading house. Some time afterwards, the Dutch governor dispatched a reinforcement from fort Amsterdam to Connecticut, designing to drive Holmes and his company from the river. A band of seventy men assaulted the Plymouth house; but they found it too well fortified, and gave up their design.

In November and December, the small pox raged among the Indians; two Sachems, with a great part of their Indians, died. When their own people forsook them, the English, who lived near them, went to their wigwams, and ministered to them. Some families spent almost their whole time with them. One Englishman buried thirty of their dead in one day.

In 1634, at a meeting of the General Court in September, the people of Newtown made application for liberty to remove to Connecticut river. Mr. Hooker

acting as principal advocate for the people, the court refused to give their consent; and the design was given over. In 1635, permission was granted, on condition that the new settlement should continue subject to the jurisdiction of Massachusetts. The people of Newtown, Dorchester, and Watertown, now began to prepare for their new habitation. In the course of the season, several people went to Connecticut river; some by water, some through the wilderness.

The Dorchester men sat down at Windsor, near the Plymouth trading house. They purchased the building and land owned by the Plymouth people. The people from Newtown, of whom but few removed till the following year, settled at Hartford. The Watertown settlers began the town of Wethersfield. In 1636, about one hundred persons, men, women, and children, led by the Rev. Messrs. Hooker and Stone, together with their horses, cattle, and swine, commenced their journey through the wilderness to Connecticut River. They travelled about two weeks on foot, during which time they lived upon the milk of their cows.

By the 25th of November, Connecticut River was frozen over; heavy falls of snow succeeded, and the season was very severe. Several small vessels, which had been laden with their furniture and provisions, sailed from Boston, and were wrecked on the coast. By the last of November provisions began to fail in the settlements on the river, and death looked them sternly in the face. Thirteen in one company, driven by hunger, attempted their way in this severe season. In passing the river one of their company fell through the ice, and was drowned, the other twelve were kept from perishing by the Indians, and arrived in Massachusetts in ten days.

Their distress was so great, that by the first of December a considerable part of the men settlers were obliged to abandon their habitations. As the only means of preserving their lives, about seventy persons, men, women, and children, left their settlements, and went down the river, in hopes of meeting with their provisions. As their expectation failed, they went on board the Rebecca, lying near the mouth of the river. This, but two days

Indian Hostility.—Page 41.

before, was frozen in twenty miles up the river, but was released by the falling of a small rain, and reached Boston in five days. Had it not been for a very quick passage, the people must have perished.

The people that kept their situations on the river suffered extremely. After all the help they were able to obtain by hunting, and from the Indians, they were obliged to subsist on acorns, malt, and grain. The number of cattle that could not be got over before winter, living upon what they found in the woods and meadows, wintered better than those which were brought over; however, a great number of them perished. Early in the spring, those who went from Connecticut to spend the winter with their friends, began to return to their new habitations.

The first court held in Connecticut, was held at Newtown, April 26th, 1636.

Towards the last of the year 1635, Mr. Winthrop, son of the Massachusetts governor, the worthy character who afterwards procured the Connecticut charter, arrived at Boston, with a commission from Lords Say and Seal, Lord Brook, and others, to take possession of Connecticut River, and build a fort, which they had named Saybrook.

In a few days a Dutch vessel appeared off the harbour, sent to take possession of the entrance of the river, and erect fortifications; but the English had by this time mounted two cannon, and prevented their landing. Thus, providentially, was this fine tract of country preserved for our venerable ancestors, and their posterity.

In September, 1636, Mr. Pynchion, with a part of the people of Roxbury, began the settlement of the town of Springfield; but no sooner had the English begun to trade, and make settlements in Connecticut, than the Pequods began to murder, and kill their cattle. In 1634 they murdered Captains Stone and Norton, with their whole crew, consisting of eight men; they then plundered and sunk the vessel.

In November following, the Pequods sent a messenger to Boston, for the purpose of obtaining peace with the English. He made an offer of a great quantity of beaver

skins, to persuade the governor to enter into a league with them. The governor assured them that the English were willing to make peace, on condition that they would give up the murderers of Captain Stone and his men; the Indians assured him that the murderers were all dead but two, and they would give them up to justice; they offered to give up their right at Connecticut river, if the English desired to settle there, and engaged to assist them as far as was in their power, in making settlements; they also agreed that they would give the English forty beaver, and thirty otter skins. The governor and council entered into a treaty with them on the conditions they proposed. Whatever their designs were at that time, they soon afterwards became more and more mischievous, hostile and bloody.

In 1636, John Oldham was murdered near Block Island. He had with him two boys, and two Narraganset Indians; these were taken and carried off. John Gallup, as he was going from Connecticut to Boston, discovered Mr. Oldham's vessel full of Indians, and saw a canoe go from her laden with goods. Suspecting they had murdered Mr. Oldham, he hailed them, but received no answer. Gallup was a bold man; and although he had but one man and two boys with him, he immediately bore down upon her, and fired duck shot so thick among them, that he soon cleared the deck.

The Indians all got under the hatches. He then stood off, bore down upon her, with a brisk gale, and nearly overset her, which so frightened the Indians that several jumped overboard, and were drowned; he then stood off, and, running down upon her the second time, raked her fore and aft with his shot, and, running down upon her a third time, he gave her such a shock, that five more jumped overboard and were drowned. He then boarded her, and took two of the Indians and bound them. Two or three others, armed with swords, in a little room below, could not be driven out. Mr. Oldham's corpse was found on board; his head split, and the body mangled in a barbarous manner.

Gallup and his men, then, as decently as possible, put the corpse into the sea. After taking her rigging and

goods, which had not been carried off, they were obliged to let her go adrift, and she was lost. The Indians who committed the murder were chiefly Block Islanders and Narragansets. The governor and council of Massachusetts despatched Captain Endicott, with ninety volunteers, to avenge the murder.

The Narraganset Sachems sent home Mr. Oldham's two boys, and made peace with them; but the other Indians made no compensation. Captain Endicott was ordered to proceed to Block Island, put the men to the sword, and take possession of the island, but to spare the women and children. They sailed from Boston 25th of August. When they arrived at Block Island, forty or fifty Indians appeared on shore, and opposed his landing. After a short skirmish, the Indians fled to the woods.

After the English had spent two days on the islands, burning the wigwams, destroying the corn, and staving their canoes, they sailed for the Pequot country: when they had arrived in Pequot harbour, Captain Endicott acquainted the Pequots with his design; in a few hours about three hundred Pequots appeared upon the shore; but as soon as they were fully informed of his business, they began to withdraw into the woods. He landed his men on both sides of the harbour, burnt their wigwams, destroyed their canoes, killed one or two Indians; and returned to Boston.

This measure, instead of allaying, seemed to increase their hostility; several persons were taken near Saybrook fort, and tortured with savage barbarity. About the beginning of October, the enemy concealed themselves in the grass in the meadow, and surprised five of the garrison at Saybrook, as they were carrying home their hay. One Butterfield was taken and tortured to death, the rest made their escape. Eight or ten days after, Joseph Filley, a master of a small vessel, was taken as he was going down the Connecticut River. He came to anchor about three miles above the fort, and taking a canoe, and one man with him, went a fowling.

No sooner had he discharged his piece, than a large number of Pequots, arising from their concealment, took him, and killed his companion. The Indians used him in

the most barbarous manner, first cutting off his hands and then his feet, thus torturing him to death. As he did not groan, they pronounced him a stout man.

In March, 1627, Lieutenant Gardiner, who commanded the fort at Saybrook, going out with about twelve men to burn their marshes, was waylaid near a narrow neck of land; the enemy rose upon him, killed three of his men, and wounded several. The enemy pursued them in great numbers to the fort, and compassed it on all sides. They challenged the English to come out and fight; they boasted that they could kill the English-men—all one flies; mocked the groans of the wounded. But the cannon being loaded with grape shot was fired among them which caused them to groan in reality.

Soon after, the enemy, in a number of canoes, beset a shallop, going down the river, with three men on board; the men fought bravely, but were overpowered by numbers, and taken. The Indians ripped them up from the bottom of their bellies to their throats, and cleft them down their backs. They then hung them upon trees beside the river, in full view of the English, as they passed up and down, on the river.

At a court holden at Hartford, it was decreed that the plantation of Newtown should be named Hartford, and that Watertown should be named Wethersfield, and that Dorchester should be called Windsor.

In April, the Indians waylaid the people at Wethersfield, as they were going into the fields to labour, and killed six men and three women; two maids were taken captive, twenty cows killed, and other damages done to the inhabitants.

The court holden at Hartford, May 1st, 1637, resolved to prosecute the war with the Pequots; that ninety men should be raised; forty-two from Hartford, thirty from Windsor, and eighteen from Wethersfield. Massachusetts determined to send two hundred, and Plymouth forty men, to assist Connecticut in prosecuting the war.

On Wednesday, the 10th of May, the troops fell down the river, for the fort at Saybrook. They consisted of 90 Englishmen, and about 70 Mohegan and River Indians. They embarked on board a pink, a pinnance, and a shal

lop. The Indians were commanded by Uncas, sachem of the Mohegans. The whole was commanded by Captain John Mason, who had been bred a soldier in the old countries. The Rev. Mr. Stone, of Hartford, went their chaplain. On Monday, the 15th, the troops arrived at Saybrook fort. As the water was low, this little fleet several times ran aground. The Indians, impatient of delays, desired to be set on shore, promising to join the English at Saybrook. The captain, therefore, granted their request. On their march they fell in with about forty of the enemy, near the fort, killed seven, and took one prisoner.

The prisoner had been a perfidious villian. He had lived in the fort some time before, and could speak English well. But after the Pequots commenced hostilities against the English, he became a constant spy upon the garrison, and acquainted Sassacus with every thing he could discover. He had been present at the slaughter of all the English who had been killed at Saybrook.

Uncas, and his men, insisted upon executing him according to the manner of their ancestors; and the English, in the circumstances in which they then were, did not judge it prudent to interpose. The Indians, kindling a large fire, violently tore him limb from limb. Barbarously cutting his flesh in pieces, they handed it round from one to another, eating it, singing and dancing round the fire, in their violent and tumultuous manner. The bones, and such parts of their captive, as were not consumed in this dreadful repast, were committed to the flames, and burnt to ashes.

This success was matter of joy, not only as it was a check upon the enemy, but it was an evidence of the fidelity of Uncas, and his Indians, of which the English had been before in doubt. There were other circumstances, however, which more than counterbalanced this joy. The army lay wind bound until Friday, and Captain Mason and his officers were entirely divided in opinion, with respect to the manner of prosecuting their enterprise. The court by the commission and instructions which it had given, enjoined the landing of the men at Pequot harbour, and that from thence they should advance upon the enemy.

The captain was for passing by them, and sailing to the

Narraganset country. He was fixed in this opinion, because that, expecting the army at Pequot harbour, they kept watch upon the river night and day. Their number of men greatly exceeded his. He was informed, at Saybrook, that they had sixteen fire arms, with powder and shot. The harbour was compassed with rocks and thickets, affording the enemy every advantage. They were upon the land, and exceedingly light-footed. He was therefore of the opinion, that they would render it very difficult and dangerous to land, and that he might sustain such loss, as would discourage his men, and frustrate the design of the expedition.

If they should make good their landing, he was sure, that while they directed their march through the country, to the enemy's forts, they would waylay, and attack them with their whole force, at every difficult pass. Besides, if they should find, on trial, that they were not able to defeat the English, they would run off to swamps and fastnesses, where they could not be found; and they should not be able to effect any thing capital against them. He was not without hopes, that, by going to Narraganset, he might surprise them. There was also some prospect that the Narragansets would join him in the expedition, and that he might fall in with some part of the troops from Massachusetts.

His officers and men in general were for attending their instructions, and going at all hazards directly to the forts. The necessity of their affairs at home—the danger of the Indians attacking their families and settlements in their absence, made them wish at once to despatch the business on which they had been sent. They did not relish a long march through the wilderness. They also imagined that they might be discovered, even should they determine to march from Narraganset to the attack of the enemy. In this division of opinion, Mr. Stone was desired by the officers most importunately to pray for them, that their way might be directed, and that, notwithstanding the present embarrassment, the enterprise might be crowned with success.

Mr. Stone spent most of Thursday night in prayer, and the next morning visiting Captain Mason, assured him,

that he had done as he was desired; adding that he was entirely satisfied with his plan. The council was again called; and, upon a full view of all the reasons, unanimously agreed to proceed to Narraganset. It was also determined that twenty men should be sent back to Connecticut, to strengthen the infant settlements, while the rest of the troops were employed in service against the enemy; and, that Captain Underhill, with nineteen men, from the garrison at Saybrook fort, should supply their places.

On Friday, May 19th, the captain sailed for Narraganset bay, and arrived on Saturday at the desired port. On Monday, Captain Mason and Captain Underhill marched with a guard to the plantation of Canonicus, and acquainted him with the design of their coming. A messenger was immediately dispatched to Miantonimoh, the chief sachem of the Narragansetts, to acquaint him also with the expedition.

The next day Miantonimoh met them, with his chief counsellors and warriors, consisting of about 200 men. Captain Mason certified him that the occasion of his coming with armed men into his country, was to avenge the intolerable injuries which the Pequots, his as well as their enemies, had done the English; and that he desired a free passage to the Pequot forts. After a solemn consultation in the Indian manner, Miantonimoh answered, That he highly approved of the expedition, and that he would send men. He observed, however, that the English were not sufficient in number to fight with the enemy. He said the Pequots were great captains, skilled in war, and rather slighted the English.

Captain Mason landed his men, and marched just at night to the plantation of Canonicus, which was appointed to be the place of general rendezvous. That night there arrived an Indian runner in the camp, with a letter from Captain Patrick, who had arrived with his party at Mr. William's plantation in Providence. Captain Patrick signified his desire that Captain Mason would wait until he could join him. Upon deliberation, it was determined not to wait, though a junction was greatly desired. The men had already been detained much longer

than was agreeable to their wishes. When they had absolutely resolved the preceding day to march the next morning, the Indians insisted that they were but in jest: that Englishmen talked much, but would not fight.

It was, therefore, feared that any delay would have a bad effect upon them. It was also suspected that, if they did not proceed immediately, they should be discovered, as there were a number of squaws who maintained an intercourse between the Pequot and Narraganset Indians. The army, therefore, consisting of seventy-seven Englishmen, sixty Mohegan and River Indians, and about two hundred Narragansets, marched on Wednesday morning, and that day reached the eastern Nihantic, about eighteen or twenty miles from the place of rendezvous the night before. This was a frontier to the Pequots, and was the seat of one of the Narraganset sachems.

Here the army halted at the close of the day. But the sachem, and his Indians, conducted themselves in a haughty manner towards the English, and would not suffer them to enter within their fort. Captain Mason, therefore, placed a strong guard round the fort, and as the Indians would not suffer him to enter it, he determined that none of them should come out. Knowing the perfidy of the Indians, and that it was customary among them to suffer the nearest relatives of their greatest enemies to reside with them, he judged it necessary, to prevent their discovering him to the enemy.

In the morning a considerable number of Miantonimoh's men came on and joined the English. This encouraged many of the Nihanticks also to join them. They soon formed a circle, and made protestations how gallantly they would fight, and what numbers they would kill. When the army marched, the next morning, the captain had with him nearly five hundred Indians. He marched twelve miles, to the ford in Pawcatuck River.

The day was very hot, and the men, through the great heat, and a scarcity of provision, began to faint. The army, therefore, made a considerable halt, and refreshed themselves. Here the Narraganset Indians began to manifest their dread of the Pequots, and to inquire of Captain Mason, with great anxiety, what were his real

designs. He assured them, that it was h's design to attack the Pequots in their forts. At this they appeared to be panic struck, and filled with amazement. Many of them drew off, and returned to Narraganset.

The army marched on about three miles, and came to Indian corn fields, and the captain, imagining that he drew near the enemy, made a halt: he called his guides and council, and demanded of the Indians how far it was to the forts. They represented, that it was twelve miles to Sassacus's fort, and that both forts were in a manner impregnable. Wequosh, a Pequot captain or petty sachem, who had revolted from Sassacus to the Narragansets, was the principal guide, and he proved faithful.

He gave such information respecting the distance of the forts from each other, and the distance which they were then at from the chief sachem's, as determined him and his officers to alter the resolution which they had before adopted, of attacking them both at once, and to make a united attack upon that at Mistic. He found his men so fatigued, in marching through a pathless wilderness, with their provisions, arms, and ammunition, and so affected with the heat, that this resolution appeared to be absolutely necessary. One of Captain Underhill's men became lame, at the same time, and began to fail. The army, therefore, proceeded directly to Mistic, and, continuing their march, came to a small swamp between two hills, just at the disappearing of the daylight.

The officers, supposing that they were now near the fort, pitched their little camp between or near two large rocks in Groton, since called Porter's Rocks. The men were faint and weary, and though the rocks were their pillows, their rest was sweet. The guards and sentinels were considerably advanced, in the front of the army, and heard the enemy singing at the fort, who continued their rejoicings even until midnight. They had seen the vessels pass the harbour some days before, and had concluded that the English were afraid, and had not courage to attack them. They were, therefore, rejoicing, singing, dancing, insulting them, and wearying themselves, on this account.

The night was serene, and, towards morning, the moon

shone clear. The important crisis was now come, when the very existence of Connecticut, under Providence, was to be determined by the sword in a single action, and to be decided by the good conduct of less than eighty brave men. The Indians who remained were now sorely dismayed, and though, at first, they had led the van, and boasted of great feats, yet were now all fallen back in the rear.

About two hours before day the men were roused with all expedition, and briefly commending themselves, and their cause, to God, advanced immediately towards the fort. After a march of about two miles, they came to the foot of a large hill, where a fine country opened before them. The captain, supposing that the fort could not be far distant, sent for the Indians in the rear to come up. Uncas and Wequosh at length appeared. He demanded of them where the fort was. They answered, on the top of the hill. He demanded of them, where were the other Indians.

They answered, that they were much afraid.—The captain sent to them not to fly, but to surround the fort, at any distance they pleased, and see whether Englishmen would fight. The day was nearly dawning, and no time was to be lost. The men pressed on, in two divisions, Captain Mason to the northeastern, and Captain Underhill to the western entrance. As the object which they had been so long seeking came into view, and while they reflected they were to fight not only for themselves, but their parents, wives, children, and the whole colony, the martial spirit kindled in their bosoms, and they were wonderfully animated.

As Captain Mason advanced within a rod or two of the fort, a dog barked, and an Indian roared out, Owanux! Owanux! That is, Englishmen! Englishmen! The troops pressed on, and as the Indians were rallying, poured in upon them, through the pallisadoes, a general discharge of their muskets, and then wheeling off to the principal entrance, entered the fort sword in hand. Notwithstanding the suddenness of the attack, the blaze and thunder of their arms, the enemy made a manly and desperate resistance. Captain Mason, and his party, drove the In

dians in the main street towards the west part of the fort, where some bold men, who had forced their way, met them, and made such slaughter among them, that the street was soon clear of the enemy. They secreted themselves in and behind their wigwams, and taking advantage of every covert, maintained an obstinate defence.

The Captain, and his men, entered the wigwams, where they were beset with many Indians, who took every advantage to shoot them, and lay hands upon them, so that it was with great difficulty that they could defend themselves with their swords. After a severe conflict, in which many of the Indians were slain, some of the English killed, and others sorely wounded, the victory still hung in suspense. The Captain, finding himself much exhausted, and out of breath, as well as his men, by the extraordinary exertions which they had made; in this critical state of action, had recourse to a successful expedient. He cries out to his men, *We must burn them.*

He immediately entered a wigwam, took fire, and put it into the mats, with which the wigwams were covered. The fire, instantly kindling, spread with such violence that all the Indian houses were soon wrapped in flames. As the fire increased, the English retired without the fort, and compassed it on every side. Uncas, and his Indians, with such of the Narragansets as yet remained, took courage from the example of the English, and formed another circle in the rear of them.

The enemy were now seized with astonishment, and forced by the flames from their lurking places, into open light, became a fair mark for the English soldiers. Some climbed the pallisadoes, and were instantly brought down by the fire of the English muskets. Others, desperately sallying forth from their burning cells, were shot, or cut in pieces with the sword. Such terror fell upon them, that they would run back from the English into the very flames. Great numbers perished in the conflagration.

The greatness and violence of the fire, the reflection of the light, the flashing and roar of the arms, the shrieks and yellings of the men, women, and children, in the fort, and the shoutings of the Indians without, just at the dawning of the morning, exhibited a grand and awful scene. In

a little more than an hour, this whole work of destruction was finished. Seventy wigwams were burnt, and five or six hundred Indians perished, either by the sword or in the flames.* A hundred and fifty warriors had been sent on the evening before, who that very morning were to have gone forth against the English. Of these, and all who belonged to the fort, seven only escaped, and seven were made prisoners. It had been previously concluded not to burn the fort, but to destroy the enemy, and take the plunder; but the captain afterwards found it the only expedient to obtain the victory, and save his men. Thus parents and children, the sannup and squaw, the old man and babe, perished in promiscuous ruin.

Though the victory was complete, yet the army were in great danger and distress. The men had been exceedingly fatigued, by the heat and long marches through rough and difficult places, and by that constant watch and guard which they had been obliged to keep. They had now been greatly exhausted, by the sharpness of the action, and the exertions which they had been necessitated to make. Their loss was very considerable. Two men were killed, and nearly twenty wounded.

This was more than one quarter of the English. Numbers fainted by reason of fatigue, the heat, and want of necessaries. The surgeon, their provisions, and the articles necessary for the wounded, were on board the vessels which had been ordered to sail from the Narraganset bay the night before, for Pequot harbour; but there was no appearance of them in the Sound. They were sensible that, by the burning of the fort, and the noise of war, they had alarmed the country, and therefore were in constant expectation of an attack, by a fresh and numerous enemy from the other fortress, and from every quarter whence the Pequots might be collected.

A number of friendly Indians had been wounded, and they were so distracted with fear, that it was difficult even to speak with their guide and interpreter, or to know any thing what they designed. The English were in an ene-

* Captain Mason, in his history, says, six or seven hundred. From the number of wigwams, and the reinforcement, the probability is, that about six hundred were destroyed.

N. ORR. N.Y.

Destruction of the Pequots.—Page 52.

my's country, and entire strangers to the way in which they must return. The enemy were far more numerous than themselves, and enraged to the highest degree. Another circumstance rendered their situation still more dangerous; their provisions and ammunition were nearly expended. Four or five men were so wounded that it was necessary to carry them; and they were also obliged to bear about twenty fire arms, so that not more than forty men could be spared for action.

After an interval of about an hour, while the officers were in consultation what course they should take, their vessels, as though guided by the hand of Providence, to serve the necessities of these brave men, came full in view, and, under a fair gale, were steering directly into the harbour. This, in the situation of the army at that time, was a most joyful sight.

Immediately upon the discovery of the vessels, about three hundred Indians came on from the other fort. Captain Mason, perceiving their approach, led out a chosen party to engage them, and try their temper. He gave them such a warm reception, as soon checked and put them to a stand. This gave him great encouragement, and he ordered the army to march for Pequot harbour. The enemy, upon this, immediately advanced to the hill where the fort stood; and viewing the destruction which had been made, stamped, and tore their hair from their heads. After a short pause, and blowing themselves up to the highest transport of passion, they leaped down the hill after the army, in the most violent manner, as though they were about to run over the English.

Captain Underhill, who, with a number of the best men, was ordered to defend the rear, soon checked the eagerness of their pursuit, and taught them to keep at a more respectful distance. The friendly Indians who had not deserted, now kept close to the English; and, it was believed, that after the enemy came on, they were afraid to leave them. The enemy pursued the army nearly six miles; sometimes shooting at a distance, from behind the rocks and trees, and, at other times, pressing on more violently, and desperately hazarding themselves in the open field

That the English might be enabled to fight, Captain Mason soon hired the Indians to carry the wounded men and their arms. The English killed several of the enemy while they pursued them, but sustained no loss themselves. When they killed a Pequot, the other Indians would shout, run, and fetch his head. At length the enemy, finding that they could make no impression upon the army, and that wounds and death attended their attempts, gave over the pursuit.

The army then marched to the harbour, with their colours flying, and were received on board the vessels, with great mutual joy and congratulation,

In about three weeks from the time the men embarked at Hartford, they returned again to their respective habitations. They were received with the greatest exultation. As the people had been deeply affected with their danger, and full of anxiety for their friends, while nearly half the effective men in the colony were in service, upon so hazardous an enterprise, so sudden a change, in the great victory obtained, and in the safe return of so many of their children and neighbours, filled them with exceeding joy and thankfulness. Every family, and every worshipping assembly, spoke the language of praise and thanksgiving.

Several circumstances attending this enterprise were much noticed by the soldiers themselves, and especially by all the pious people. It was considered as very providential, that the army should march nearly forty miles, and a considerable part of it in the enemy's country, and not be discovered until the moment they were ready to commence the attack. It was judged remarkable, that the vessels should come into the harbour at the very hour in which they were most needed.

The life of Captain Mason was very signally preserved. As he entered a wigwam for fire to burn the fort, an Indian was drawing an arrow to the very head, and would have killed him instantly; but Davis, one of his sergeants, cut the bow-string with his cutlass, and prevented the fatal shot. Lieutenant Bull received an arrow into a hard piece of cheese, which he had in his clothes, and by it was saved harmless. Two soldiers, John Dyer and Thomas Stiles, both servants of one man, were shot in the

knots of their neckcloths, and by them preserved from instant death.

Few enterprises have ever been achieved with more personal bravery or good conduct. In few instances have so great a proportion of the effective men of a whole colony, state, or nation, been put to so great and immediate danger. In few have a people been so deeply and immediately interested, as the whole colony of Connecticut was in this, in that uncommon crisis. In these respects, even the great armaments and battles of Europe, are, comparatively, of little importance. In this, under the divine conduct, by seventy-seven brave men, Connecticut was saved, and the most warlike and terrible Indian nation in New-England, defeated and ruined.

The body of the Pequots, returning from the pursuit of Captain Mason, repaired to Sassacus, at the royal fortress, and related the doleful story of their misfortunes. They charged them all to his haughtiness and misconduct, and threatened him, and his, with immediate destruction. His friends and chief counsellors interceded for him; and, at their entreaty, his men spared his life. Then, upon consultation, they concluded that they could not, with safety, remain any longer in the country. They were, indeed, so panic struck, that, burning their wigwams, and destroying their fort, they fled and scattered into various parts of the country. Sassacus, Mononotto, and seventy or eighty of their chief counsellors and warriors, took their route towards Hudson's river.

Just before Captain Mason went out upon the expedition against the Pequots, the Dutch performed a very neighbourly office for Connecticut. The two maids, who had been captivated at Wethersfield, had, through the humanity and mediation of Mononotto's squaw, been spared from death, and kindly treated. The Dutch governor, receiving intelligence of their circumstances, determined to redeem them at any rate, and despatched a sloop to Pequot harbour for that purpose. Upon its arrival, the Dutch made large offers for their redemption, but the Pequots would not accept them. Finally, as the Dutch had a number of Pequots on board, whom they had taken, and finding that they could do no better, they offered the Pe

quots six of their own men for the two maids. These they accepted, and the Dutch delivered the young women at Saybrook, just before Captain Mason and his party arrived. Of them he received particular information respecting the enemy.

An Indian runner, despatched by Mr. Williams, at Providence, soon carried the news of the success of Connecticut against the Pequots, to the Governor of Massachusetts. The governor and his council, judging that the Pequots had received a capital blow, sent forward but a hundred and twenty men. These were commanded by Mr. Stoughton, and the Rev. Mr. Wilson, of Boston, was sent as his chaplain.

This party arrived at Pequot harbour the latter part of June. By the assistance of the Narraganset Indians, the party under Captain Stoughton surrounded a large body of Pequots in a swamp. They took eighty captives. Thirty were men; the rest were women and children. The men, except two sachems, were killed, but the women and children were saved. The sachems promised to conduct the English to Sassacus, and for that purpose were spared for the present.

The court of Connecticut ordered, that forty men should be raised forthwith for the further prosecution of the war against the Pequots, to be commanded by Captain Mason.

The troops from Connecticut made a junction with the party under the command of Captain Stoughton, at Pequot. Mr. Ludlow, with other principal gentlemen from Connecticut, went also with the army, to advise with respect to the measures to be adopted in the further prosecution of the war. Upon general consultation, it was concluded to pursue the Pequots, who had fled to the westward. The army marched immediately, and soon discovered the places where the enemy had rendezvoused, at their several removes. As these were not far distant from each other, it appeared that they moved slowly, having their women and children with them. They also were without provisions, and were obliged to dig for clams, and to range the groves for such articles as they afforded.

The English found some scattering Pequots, as they scoured the country, whom they captivated, and from

whom they obtained intelligence relative to the Pequots whom they were pursuing. But finding that the sachems, whom they had spared, would give them no information, they beheaded them, on their march, at a place called Menunkatuck, since Guilford; from which circumstance, the spot on which the execution was done, bears the name of Sachem's Head to the present time. In three days, they arrived at New-Haven harbour. The vessels sailed along the shore, while the troops marched by land.

At New-Haven, then called Quinnipiack, a great smoke, at a small distance, was discovered in the woods. The officers supposing that they had now discovered the enemy, ordered the army immediately to advance upon them; but were soon informed that they were not in that vicinity. The Connecticut Indians had kindled the fires whence the smoke arose. The troops soon embarked on board the vessels. After staying several days at New-Haven, the officers received intelligence from a Pequot, whom they had previously sent to make discovery, that the enemy were at a considerable distance, in a great swamp, to the westward. Upon this information, the army marched with all possible despatch to a great swamp in Fairfield, where were eighty or a hundred Pequot warriors, and nearly two hundred other Indians.

The swamp was such a thicket, so deep and boggy, that it was difficult to enter it, or make any movement without sinking in the mire. Lieutenant Davenport, and others, rushing eagerly into it, were sorely wounded, and several were soon so deep in the mud, that they could not get out without assistance. The enemy pressed them so hard, that they were just ready to seize them by the hair of their head. A number of brave men were obliged to rescue them sword in hand. Some of the Indians were slain, and the men were drawn out of the mire. The swamp was surrounded, and after a considerable skirmish, the Indians desired a parley.

As the officers were not willing to make a promiscuous destruction of men, women, and children, and as the sachem and Indians of the vicinity had fled into the swamp, though they had done the colonies no injury, a parley was granted. Thomas Stanton, a man well acquainted with

the manners and language of the Indians, was sent to treat with them. He was authorized to offer life to all the Indians who had shed no English blood. Upon this offer, the sachem of the place came out to the English, and one company of old men, women, and children, after another, to the number of about two hundred.

The sachem of the place, declared for himself and his Indians, that they had never shed the blood of the English, nor done them any harm. But the Pequot warriors had too great a spirit to accept of the offer of life, declaring, that they would fight it out. They shot their arrows at Stanton, and pressed so hard upon him, that the soldiers were obliged to fly to his rescue. The fight was then renewed, the soldiers firing upon them whenever an opportunity presented. But by reason of an unhappy division among the officers, a great part of the enemy escaped. Some were for forcing the swamp immediately, but this was opposed, as too dangerous. Others were for cutting it down, as they had taken many hatchets, with which they were of the opinion it might be effected. Some others were for making a pallisado and hedge around it, but neither of these measures could be adopted.

As night came on, the English cut through a narrow part of it, by which the circumference was greatly lessened; so that the soldiers, at twelve feet distance from each other, were able completely to compass the enemy. In this manner they enclosed and watched them until it was nearly morning. A thick fog arose just before day, and it became exceedingly dark. At this juncture, the Indians took the opportunity to break through the English. They made their first attempt upon Captain Patrick's quarters, yelling in their hideous manner, and pressing on with violence, but they were several times driven back. As the noise and tumult of war increased, Captain Mason sent a party to assist Captain Patrick. Captain Trask also marched to reinforce him.

As the battle greatly increased, the siege broke up. Captain Mason marched to give assistance in the action. Advancing to the turn of the swamp, he found that the enemy were pressing out upon him; but he gave them so warm a reception, that they were soon glad to retire

While he was expecting that they would make another attempt upon him, they faced about, and, falling violently on Captain Patrick, broke through his quarters and fled. These were their bravest warriors, sixty or seventy of whom made their escape. About twenty were killed, and one hundred and eighty were taken prisoners. The English also took hatchets, wampum, kettles, trays, and other Indian utensils.

The Pequot women and children, who had been captivated, were divided among the troops. Some were carried to Connecticut, and others to the Massachusetts. The people of Massachusetts sent a number of the women and boys to the West-Indies, and sold them for slaves. It was supposed that about seven hundred Pequots were destroyed. The women who were captivated, reported, that thirteen sachems had been slain, and that thirteen yet survived. Among the latter were Sassacus and Mononotto, the two chief sachems. These, with about twenty of their best men, fled to the Mohawks. They carried off wampum to the amount of 500 pounds. The Mohawks surprised and slew them all, except Mononotto. They wounded him, but he made his escape. The scalp of Sassacus was sent to Connecticut in the fall, and Mr. Ludlow, and several other gentlemen, going into Massachusetts, in September, carried a lock of it to Boston as a rare sight, and a sure demonstration of the death of their mortal enemy.

Among the Pequot captives were the wife and children of Mononotto. She was particularly noticed, by the English, for her great modesty, humanity, and good sense. She made it as her only request, that she might not be injured, either as to her offspring or personal honour. As a requital of her kindness to the captivated maids, her life, and the lives of her children, were not only spared, but they were particularly recommended to the care of Governor Winthrop. He gave charge for their protection and kind treatment.

After the swamp fight, the Pequots became so weak and scattered, that the Narragansets and Mohegans constantly killed them, and brought in their heads to Windsor and Hartford. Those who survived were so hunted

and harrassed; that a number of their chief men repaired to the English, at Hartford, for relief. They offered, it their lives might be spared, that they would become the servants of the English, and be disposed of at their pleasure. This was granted, and the court interposed for their protection.

Uncas and Miantonimoh, with the Pequots, by the direction of the magistrates of Connecticut, met at Hartford; and it was demanded by them, how many of the Pequots were yet living? they answered, about two hundred, besides women and children. The magistrates then entered into a firm covenant with them, to the following effect; that there should be perpetual peace between Miantonimoh and Uncas, and their respective Indians; and that all past injuries should be remitted, and for ever buried; that if any injuries should be done, in future, by one party to the other, that they should not immediately revenge it, but appeal to the English to do them justice. It was stipulated, that they should submit to their determination, and that if either party should be obstinate, that then they might enforce submission to their decisions. It was further agreed, that neither the Mohegans, nor Narragansets, should conceal nor entertain any of their enemies, but deliver up or destroy all such Indians as had murdered any English man or woman.

The English then gave the Pequot Indians to the Narragansets and Mohegans, eighty to Miantonimoh, twenty to Ninnigret, and the other hundred to Uncas, to be received and treated as their men. It was also covenanted that the Pequots should never more inhabit their native country, nor be called Pequots, but Narragansets and Mohegans. It was also further stipulated, that neither the Narragansets nor Mohegans should possess any part of the Pequot country without the consent of the English. The Pequots were to pay a tribute at Connecticut, annually, of a fathom of wampumpeag for every sannup, of half a fathom for every young man, and of a hand for every male papoose. On these conditions the magistrates, in behalf of the colony, stipulated a firm peace with all the Indians.

The conquest of the Pequots struck all the Indians in

New-England with terror; and they were possessed with such fear of the displeasure and arms of the English, that they had no open war with them for nearly forty years.

This happy event gave great joy to the colonies. A day of public thanksgiving was appointed; and, in all the churches of New-England, devout and animated praises were addressed to Him, who giveth his people the victory, and causeth them to dwell safely.

The war with the Pequots led to the discovery of Quin napiack, (now New-Haven.) Mr. Eaton, Mr. Hopkins, Mr. Davenport, and several others, commenced a settlement; and on the 18th of April, 1638, they kept the first sabbath in that place. They assembled under a large spreading oak, and Mr. Davenport preached to them from Matthew vi. 1.

On the first of June, about three or four o'clock in the afternoon, was a great earthquake throughout New-England. The shock was so great, that a number of chimneys were thrown down; the earth by turns was unquiet for fifteen days.

In addition to the town of New-Haven, several other towns were soon commenced, which were included in this colony. In 1639, commenced the towns of Guilford and Milford. Stamford was settled in 1641; soon after began the town of Branford. Some settlements on Long Island were included in the colony of New-Haven.

The colony of New-Hampshire, which now holds a distinguished rank among the New-England states, though its settlement began at a very early period, did not become a separate colony till many years after that settlement commenced. Captain Smith, of Virginia, who sailed along the shore of New-England, in 1614, and published a chart of the coast, with some account of the country, discovered the River Piscataqua. He found the river to be large, the harbour capacious and safe, and gave a favourable representation of the place as a site for a new plantation.

Gorges and Mason, two members of the council of Plymouth, in England, having obtained from the council a grant of that tract of country, attempted the establishment of a colony and fishery at the river Piscataqua. In

the spring of the year 1623, they sent over a few persons for this purpose, who sat down on the south side of the river, near its mouth, and there fixed a temporary residence. This was the beginning of the excellent and flourishing town of Portsmouth. The same year, two of the company erected a fish-house at the place of the present town of Dover.

These settlements, for several years, were small, and scarcely permanent. In 1629, some of the settlers about the Massachusetts Bay, wishing to unite with the settlement at Piscataqua, they assembled the chiefs of several Indian tribes at Squamscot falls, now Exeter, and, for a valuable consideration, made a purchase of an extensive tract of land. In the instrument of conveyance, the natives express a "desire to have the English come and settle among them, as among their countrymen in Massachusetts." After this purchase, the plantation had a moderate increase, but no new settlements were made till the year 1638, which was the beginning of the towns of Exeter and Hampton.

The people at Dover early erected a convenient meeting-house, which was afterwards improved as a fortification. A church was soon organized, of a character similar to the churches in the neighbouring colonies; and Mr. William Leverich, a worthy and able puritan divine, came from England in 1633, and became their minister. The settlement at Portsmouth, in their infant state, erected a house for divine worship, and enjoyed, successively, the labours of several faithful ministers. The ministry of one of these, Mr. James Parker, was attended with much success. But the town had no settled minister till a number of years after its settlement.

The people who made the settlement of Exeter, in 1638, were mostly from Boston. Having been regularly dismissed from the church in that town, they immediately united in a church relation, on the principles of their mother church. As they judged their settlement to be without the jurisdiction of Massachusetts, they formed themselves into a body politic, chose rulers and assistants, who were sworn to the proper execution of their respective offices, and a correspondent oath of obedience was

taken by the people. In this political compact, we have an instance of civil government in its simplest, perhaps, in its purest form. The magistrates, who were few, were vested with legislative, judicial, and executive authority.

The settlements at Portsmouth and Dover, for several years, were governed, principally, by agents sent over by the proprietors in England. Having experienced many inconveniences from this mode of government, they, separately, forming a civil compact, after the example of their neighbours at Exeter, enacted and enforced their own laws. The combination at Dover was similar to the one at Exeter; at Portsmouth they had a chief magistrate, annually elected, styled a governor.

These settlements, for many years, lived peaceably with the natives, and, from their great advantages for fishery, experienced less of the evils of famine than the neighbouring colonies. Placed in distinct civil communities, they soon found themselves exposed to a variety of difficulties, and peculiarly defenceless in the event of trouble from an enemy. Their corporations were necessarily weak, and exposed to the intrusion of vagrants and outlaws, who would not submit to the steady government which was maintained in the colonies of Massachusetts and Plymouth. Had these political combinations been left to the management of their original framers, and their posterity, they might have exhibited an example of the finest republics on historic record. But the constant influx of emigrants, and of demagogues invited by their weakness, rendered this expectation hopeless. These considerations induced the settlement to desire a union with the colony of Massachusetts.

The subject having been for some time in agitation, in the year 1641, the settlements on and near the Piscataqua, submitted to the jurisdiction of Massachusetts, on condition of enjoying equal privileges with the people of that colony, and having a court of justice maintained among themselves. They were cordially accepted by that government, and thus, by a solemn compact, became a part of the colony of Massachusetts. From this time, the settlements advanced in a more rapid progress, and in greater security; and their civil and ecclesiastical history

becomes one with the colony of which they now constituted a respectable portion. This union continued till the year 1679, when, by the authority of the King of Great Britain, New-Hampshire was separated from the government of Massachusetts, and became a royal province.

One of the most prominent characters in the early history of New-England, was Roger Williams. He was a man of considerable ability and learning, active and diligent in his pursuits, humane and benevolent in his character, ever fond of novelty and change. Previous to his coming to America, Mr. Williams was a minister in the church of England. He came to New-England in the year 1631, and resided two years at Plymouth. He there exercised his ministerial functions, occasionally, to good acceptance.

During his residence at Plymouth, his conduct was inoffensive, and his character naturally mild, so that he ever after retained the esteem of the people of that colony. In 1633, he removed to Salem, and, on the death of their excellent minister, Mr. Skelton, the church in that town invited Mr. Williams to become their pastor. During his connexion with the church at Salem, Mr. Williams inculcated many opinions which were disapproved by the government and churches of the colony, which it was thought would prejudice their interests in the view of the mother country, and destroy that system of civil and ecclesiastical polity on which the colony existed.

After much faithful and friendly dealing, Mr. Williams being unwilling to renounce or conceal the sentiments which he entertained, in 1635, he was directed by the government to depart from the jurisdiction of Massachusetts. He removed with a few followers, and sat down within the Plymouth jurisdiction, in the present town of Rehoboth. The year following, at the desire of Governor Winslow, lest the government of Massachusetts should take umbrage at his remaining within the Plymouth jurisdiction, he crossed the Pawtucket River, and, with about twenty settlers, laid the foundation of the present opulent and flourishing town of Providence.

These dissensions were conducted in such a manner, that no personal alienation appears to have taken place

between Mr. Williams and Governor Winthrop; and a constant interchange of good offices existed between the Providence Plantation and the Massachusetts and Plymouth Colonies. In the war with the Pequots in 1637, there was a cordial co-operation of all the plantations against the common enemy. Probably no individual of the age made greater and more successful exertions to maintain the peace of the colonies with the natives; and, living in the vicinity of several powerful tribes, he was vigilant in discovering their designs, and gave the other colonies timely notice of their hostile machinations.

Mr. Williams, for some years, established no particular church order, inviting persons of all religious sentiments to unite with his rising plantation. After a few years, he and several of his people renounced the baptism of their infancy, were re-baptized, and united in a church, which was, I believe, the first Baptist church in New-England. On account of differences of sentiment which subsequently prevailed in the church, in the year 1653, it was divided, and became two churches. Mr. Williams purchased the lands of his plantation of the Indian proprietors, and no man enjoyed their confidence in a higher degree. He was the father of the colony, and, for some time, he appears to have possessed and exercised the principal powers of government which existed. In some of the first years of the Providence Plantation, the people suffered very sensibly from scarcity. The product of their forests and rivers saved them from perishing by famine. The most of the fathers of New-England experienced the evils of war and famine, in a degree of which their posterity are unable to form any adequate conception.

At the time of the banishment of Mrs. Hutchinson from Massachusetts, several people who had favoured her religious opinions, and, of course, differed in principle from the prevailing sentiments of the churches, chose to remove from the colony. One of these was Mr. William Coddington, a gentleman of education and affluence, who had been for several years an assistant, and one of the most worthy magistrates of the Massachusetts government. In the year 1638, Mr. Coddington, with a few others, removed to Narraganset Bay, and commenced the

settlement of Rhode Island. These planters immediately united in a civil compact, to which Mr. Coddington and seventeen others subscribed their names.

This infant plantation furnishes an instance of something of the simplicity and natural existence of a patriarchal government. Mr. Coddington, a man of great virtue and natural dignity of character, possessing the confidence of all, was created their magistrate, to whom was delegated the necessary powers of civil government. By the friendly assistance of Mr. Williams, he purchased the island of the Indians; and, in consequence of its pleasantness and fertility, in a few years it became a flourishing settlement. In the year 1644, a Baptist church was formed in Newport, which was afterwards divided into two. A congregational church was formed in Newport, in 1720; and a second one in 1728. These two churches afterwards enjoyed the ministry of the most eminent American divines of the last century—President Stiles and Dr. Hopkins.

These settlements being destitute of any chartered government from the mother country, in 1643 Mr. Williams went to England, and by the assistance of Mr. Vane, who had been governor of Massachusetts, obtained a liberal charter of incorporation of Providence and Rhode-Island Plantations. The form of government provided by this incorporation was essentially similar to that established in the adjacent colonies. Mr. Williams lived to a great age, and was chosen several times governor of the colony.

As early as the year 1607, some of the Patentees of the northern colony of Virginia began a settlement at the mouth of the River Sagadahock, now Kennebeck. They laid the plan of an extensive and opulent state. But in consequence of the death of the principal patrons, and the severities endured by the planters, the settlement broke up the following year, and those who were living returned to England. The first permanent settlements made within the District of Maine, commenced about the year 1630. The oldest towns are Kittery and York.

In the year 1635, Sir Ferdinando Gorges obtained from the council of Plymouth a grant of the tract of land lying

between the Rivers Sagadahock and Piscataqua. It is supposed that he instituted civil government in the province. Courts were held as early as 1636, who appear to have exercised legislative and judicial powers. In 1639, Gorges obtained from the crown a charter, conveying the amplest powers of jurisdiction. He appointed a governor and council, who administered justice to the people to their general satisfaction, for a number of years.

After the death of the proprietor, these powers of government were generally supposed to have expired. The different settlements formed some kind of voluntary compacts, and elected their own rulers. But the people, soon perceiving the inconveniences of this state of things, in the year 1652, united with the government of Massachusetts, and became an integral part of that colony.

In the first settlements, churches were early established, who enjoyed the labours of some of the worthiest ministers of their time. In general, their early civil and religious institutions were very similar to those of Massachusetts.

No part of New-England has suffered so much from the hostility of the natives, as the District of Maine. Many ferocious tribes of savages were settled on the rivers with which the country abounds, and from the small progress made by the settlements for a long period, they were unable to subdue their power, or prevent their predatory incursions. From the proximity of that district to Canada, in all the wars between England and France for a century after its first settlement, they were exposed to the hostile incursions of the savages, stimulated by a most artful and unfeeling enemy. Many of their towns have been pillaged and burnt, and many of the people made captives and slain. So late as the war of 1745, many of the towns suffered severely from savage hostility.

The state of Vermont, the youngest of the New-England States, has advanced in population and wealth more rapidly than either of the others, and holds a respectable rank in their number. The tract of country composing that state, lying between the states of New-Hampshire and New-York, to which both laid an imperfect claim, remained long unoccupied.

In the year 1724, in the time of a severe Indian war

the government of Massachusetts erected **Fort Dummer** within the present town of Brattleborough, and commenced a small settlement near the fort. This was then supposed to be within the limits of Massachusetts; but, on running the province lines in 1741, it fell within the state of Vermont. In the year 1731, the French from Canada erected the well-built fort at Crown Point, on the west side of Lake Champlain, and, soon after, began a settlement on the eastern side of the lake, opposite to the fort.

From the time in which the provincial line between Massachusetts and New-Hampshire was ascertained, till after the peace of 1763, when it became a subject of controversy, the territory of Vermont was considered as belonging to New-Hampshire. The town of Bennington, as it is one of the best, is considered the oldest town in the state. This township was granted to certain proprietors, in the year 1749, by the Governor* of New-Hampshire, and called after his name. Soon after this grant, the settlement of that town commenced.

In four or five of the following years, a few other towns were granted by the government of New-Hampshire, on the western side of Connecticut River. The war of 1755, put a stop to these grants and settlements. In the progress of the war, the territory of Vermont became the scene of military operations. These events produced a general acquaintance with many parts of the country, and towards the conclusion of the war, extensive grants of townships were made by the New-Hampshire government, and numerous openings were made in the wilderness.

From 1764 to the commencement of the American war, the new settlers were harassed with conflicting claims to their territory, maintained by the provinces of New-Hampshire and New-York. Notwithstanding these embarrassments, the infant settlements gradually increased by emigrations from the several New-England provinces. At the commencement of the war of 1775, the people of Vermont warmly espoused the American cause, and, during its continuance, performed many important services. As the authority of the royal governments became disa

* Benning Wintworth.

vowed, the people finding themselves wholly destitute of any bonds of civil government, public sentiment naturally adverted to the necessity of some political regulations for the general safety.

There having been several conventions of committees of towns, to deliberate on measures to be pursued, in January, 1777, a convention of delegates from the respective towns, held at Westminster, resolved that the territory now included in that state, should "be considered as a free and independent jurisdiction of state: to be for ever hereafter called, known, and distinguished, by the name of New-Connecticut, alias Vermont." From this period, Vermont became an independent state; and, in 1791, was admitted a member of the American union.

The settlers of Vermont were mostly emigrants from Connecticut, and, for several years after the peace of 1783, their number increased with an unprecedented rapidity. Their civil and religious institutions were generally copied from those existing in Connecticut. A congregational church was early established at Bennington, and continued many years under the ministry of the pious and worthy Mr. Dewey. In most of the towns, churches were established at an early period of their settlement, who have enjoyed the labours of many able and faithful ministers of Christ.

The churches and ministers in Vermont have been remarkable for uniformity in religious sentiment and practice, conformable to the Calvinistic system, and to the doctrines of the gospel so ably vindicated by several New-England divines of the last century. The late Dr. Job Swift, who has been styled the Apostle of Vermont, not more distinguished for abilities and piety, than for indefatigable labours, was an eminent instrument of organizing and establishing the churches and religious institutions of the state, and was an unshaken pillar of divine truth, in the midst of his labours in the service of his Master and his fellow men, was suddenly removed to his eternal rest. The churches and people of the state have been favoured with many gracious manifestations of the special influences of the Holy Spirit, in reviewing the in-

terests of vital religion, and bringing many souls into the holy kingdom of the Redeemer.

Probably no instance can be found in the history of men, where all public institutions of a civil, moral, and religious character, are held so entirely under the constant control of public sentiment, as in the state of Vermont. It is earnestly hoped, that through the merciful favour of Heaven, that people may be long worthy of the possession of the many privileges which they now enjoy.

Remarks upon the Religion of the Colony.

It is a very singular fact, that while the English government, and all the ecclesiastical authority, were using their most vigilant exertions to suppress evangelical religion, and put an effectual stop to the progress of puritanism, and while the New-England colonies were formed for the express purpose of the promotion of these objects, they were suffered to proceed with very little molestation. The company that formed the settlement of Plymouth, having long experienced the severities of ecclesiastical tyranny, were fearful of forming a settlement in any of the dominions of the British king, without a promise that they should not be obstructed in the free exercise of their religion. Frequent and earnest solicitations were made to the royal court for such a permission.

But as such a concession would not comport with the maxims of a bigoted prince, and a persecuting prelate, it was never obtained. The adventurers, therefore, committed their case to the protection of God, and they were not disappointed. The succeeding companies, though many important civil privileges were secured to them by patent, could obtain no more than indirect intimations that they might enjoy liberty of conscience in the services of religion. They hoped, indeed, that the God whom they served, would remember their wants, and that the distance of three thousand miles would mitigate the rage of persecution.

The religious order which they established was directly opposed to the sentiments of the government, and was such as they had long laboured to suppress. But through

the interference of various causes, in which the hand of God was peculiarly visible, they were left undisturbed, till their churches had become firmly established. Archbishop Laud resolved, at length, to interfere, and subject the colonies to the same ecclesiastical order as the mother country. But his death soon put an end to his design.

The long period of the civil wars, and the commonwealth which then succeeded, enabled the ecclesiastical institutions of the colonies to acquire such a consistence as could not easily be dissolved. That remarkable interval in the English monarchy, of which there has been no equal in ten centuries, was the occasion of the establishment of the gospel order in the New-England churches. How unsearchable and holy are the appointments of God !

In 1656, Quakers made their first appearance in the Massachusetts colony ; but the legislature passed laws for their banishment: that any Quaker, returning from banishment to renew his practices against the colony, should be put to death. Under this law four persons were executed.

Any master of any vessel that should bring any of this sect into the jurisdiction of Massachusetts, should be subject to a fine of one hundred pounds. Notwithstanding this arbitrary law, it appears that this sect continued to increase, even down to the present time, and holds a very respectable station among other honourable societies.

The Roman Catholics first came to America in 1632.

The first Baptist church in America was formed at Providence, in 1639.

Manners and Customs.—The laws of the colonies, in 1639, prohibited the custom of drinking healths. In 1651 the legislature passed laws, prohibiting all persons whose estate did not exceed two hundred pounds, from wearing any gold or silver lace, or any bone lace, that cost above two shillings per yard. The selectmen were authorized to take notice of the fashions, the apparel of the people, especially in wearing of ribands and great boots.

In 1647, it was ordered, that no person under the age of twenty years, should use any tobacco, unless he should bring a certificate from a physician that it was useful to him

Agriculture was first attended to by clearing the forests, by cutting down the trees, and digging up the stumps, before tillage. The first neat cattle were brought into New-England by Mr. Winslow, in 1624. In 1633, the cattle in Virginia had increased to about 1000 head. They also raised a large quantity of wheat and rye, some peas, beans, flax, and hemp.

Commerce.—The colony imported all their merchandise from England, and exported thither peltry, tobacco, beef, pork, grain, and fish. The importations from England much exceeded the exports thither. The skins of deer, elk, buffalo, and the furs of otters, hare, fox, muskrat and beaver, were purchased of Indians, for rum, blankets, &c. and exported to England.

Arts and Manufactures.—In 1620, 100 persons came from England, to carry on the manufacture of silk, potash, tar, pitch, glass, and salt, but did not succeed. All cordage, sail cloth, and mats, came from England. Brick and framed houses were soon built in large towns. The first mill was a wind-mill, built near Watertown. The first vessel was built in Massachusetts, which was called the Blessing of the Bay. In 1633, a ship of 60 tons was built at Medford. In 1641, one was built at Salem, of 300 tons, and another of 160 tons, at Boston.

Printing was first introduced in 1639. The first thing printed was a Freeman's Oath, the next an Almanac; the third a collection of Psalms.

Education.—Scarcely had the people opened the forest, and constructed habitations, before they directed their attention towards the education of their children. Schools were free to all classes of people; the poor had the same advantage in educating their children as the rich.

Population of Massachusetts, Connecticut, Rhode Is. and, New-Hampshire, Maine, and Vermont, was estimated at about 75,000.

But it is impossible to ascertain very exactly the population of the American colonies at the close of this period. The estimates made by writers, are vague, and often contradictory. It is worthy of particular notice, that so small a population, scattered over such an extent of country, should have been able to conquer so many Indians and thereby save themselves from savage destruction.

UNIVERSAL HISTORY

OF THE UNITED STATES.

PART SECOND.

CHAPTER IV.

Discovery and Progress of the Middle and Southern States.

NEW-YORK.

The reader's first attention in this second part, will be directed to the settlement of New-York.

Captain Henry Hudson, commissioned by the king, in 1608, sailed in the employment of several London merchants, to North America. He came upon the coast, in about forty degrees of north latitude, and made a discovery of Long-Island and Hudson River. He proceeded up the river, as far as the latitude of forty-three, and called it by his own name.

About two years after, he made a second voyage to the river, in the service of a number of Dutch merchants; and some time after, sold his right to them. The right to the country, however, belonged to King James, by virtue of the discovery which Hudson had made under his commission. The English protested against the sale. But the Dutch, in 1614, built a fort, nearly on the same ground where Albany now stands, which they called Fort Auranea.

Sir Thomas Dale, governor of Virginia, directly after despatched Captain Argall to dispossess the Dutch, and they submitted to the king of England, and under the governor of Virginia

But, receiving a reinforcement the next year, they again asserted the right of Holland to the country, and erected Fort Amsterdam on the south of the island. The English, for many years, did not interfere.

In 1621, an extensive territory on both sides of the Hudson, was granted to the Dutch West India Company, and called New-Netherlands. The boundaries were considered by the company as including Connecticut River on the north, and Delaware River on the south. In 1623, they erected a fort on the Delaware, which they called Nassau; and, in 1633, they erected another on Connecticut, which they called Good Hope. Near the former the Swedes had a settlement; and a quarrel arose between the settlers, which continued for many years, which terminated in the subjugation of the Swedes.

NEW-JERSEY.

The first settlement of New-Jersey was made by the Danes, about the year 1624. Soon afterwards, several Dutch families seated themselves in the vicinity of New-York. In 1626, a company was formed in Sweden, under the patronage of King Gustavus Adolphus, for the purpose of planting a colony in America.

The next year a number of Swedes and Finns came over, and made a settlement on the west bank of the Delaware River.

In 1640, the English began a plantation on the eastern bank. The Swedes, in concert with the Dutch, who possessed New-York, drove them out of the country.

DELAWARE.

This state was settled by a company of Swedes and Finns, under the patronage of King Gustavus Adolphus.

In 1627, they landed at Cape Henlopen, and were so charmed with its appearance, that they gave it the name of Paradise Point. The country they called New-Sweden, and the River Delaware, New-Swedeland Stream. They purchased of the Indians, the lands on both sides of that river, from the sea to the falls, and seated themselves at

the mouth of Christian Creek, near Wilmington. Being frequently molested by the Dutch, who claimed a right to the country, they, for their protection, built forts at Christian, Lewiston, and Tinicum. The last was their seat of government, and John Printz, their governor, erected an elegant mansion at this place, which he named Printz Hall

MARYLAND.

This state was settled by one Calvert, who sailed for America near the close of 1633, accompanied by about two hundred emigrants, chiefly Roman Catholics.

They arrived in February, 1634, at the mouth of the River Potomac. At a conference with the Indians, who dwelt on the shore, they purchased Yoamaco, a considerable village, the site which St. Mary's now occupies.

This colony, as well as all others, in the early period of their existence, was afflicted with troubles; they were principally caused by one William Clayborne. While a member of the Virginia council, he had obtained a license from the king to traffic in those parts of America where no other person enjoyed the exclusive right of trade. Under this license he had made a small settlement on the island of Kent, and when the grant was made to Lord Baltimore, refused to submit to his authority. He persuaded the natives that the new comers were Spaniards and enemies to the Virginians.

An Indian war was the consequence, which continued for several years with great distress. Clayborne was indicted, and convicted of murder, piracy, and sedition, and, fleeing from justice, his estate was confiscated. He applied to the king for redress, but did not succeed. When the civil war between the king and parliament began, he embraced the cause of the latter, returned to Maryland, and, by his intrigues, fomented, in 1645, a rebellion against its rulers, who were attached to the royal cause. Calvert, the governor, was compelled to fly to Virginia, and the insurgents seized the reins of government. The next year, however, the revolt was suppressed, and tranquillity restored.

NORTH CAROLINA.

In 1630, Charles I. granted to Sir Robert Heath all the territory between the 30th and 36th degrees of north latitude, and extending from the Atlantic Ocean to the South Sea, by the name of Carolina. Under this grant, no settlement was made. In 1640, some person fled from Virginia, and without license from any source, occupied that portion of North Carolina north of Albemarle Sound. In 1661, another settlement was made near the mouth of Clarendon River, by adventurers from Massachusetts. The land being sterile, and the Indians hostile, they soon abandoned it.

In June, a patent was granted by the king, conveying to twenty-one trustees, the territory now constituting the state of Georgia, which was to be apportioned gratuitously among the people, and donations were made for the purpose of conveying them thither, and for their support the first season.

In November, one hundred and thirty emigrants embarked for Georgia: in January, they arrived at Charleston. The Carolinians gave the adventurers a cordial welcome; they supplied them with provisions and boats to carry them to the place of their destination; and on the 9th of February, they erected the first house, where Savannah now stands.

History of the whole Colonies of America combined, from 1661.

Before the session of the General Assembly of Connecticut, in October, 1662, the charter was brought over. Upon the day of the election, it was publicly read to the freemen, and declared to belong to them and to their successors. They then proceeded to make choice of Mr. Wyllys, Mr. Talcott, and Mr. Allen, to receive the charter into custody, and keep it in behalf of the colony.

In 1663, a tax of three hundred pounds was levied upon the colony. A day of fasting and prayer was appointed. The colony was much in debt; many were dissatisfied

Washington as a Surveyor.

with the governor, and refused to pay any thing for his support.

No sooner did the officers begin to distrain the rates of those who refused to pay, than it produced the most alarming consequences. The gentlemen from Connecticut remonstrated against collecting taxes from those who had been taken under the protection of that colony, and desired New-Haven to suspend the affair for further consideration.

Colonel Nichols arrived at Boston, with a fleet and troops under his command, July 23, 1664. He immediately communicated his commission to the colonies, and requested the troops to assist him against the Dutch. He then sailed for New-Netherlands, and on the 20th of August made a demand upon the town and forts upon the Island of Manhatoes. Governor Winthrop, with several gentlemen from Connecticut, joined him, according to his wishes. Stuyvesant, the Dutch governor, was an old soldier, and had he been prepared, doubtless would have made a brave defence. He was extremely opposed to a surrender of the fort and town, but the opposition party outnumbered him, and he was obliged to submit on the 27th of August.

After the reduction of the Dutch, Colonel Nichols fixed his residence at New-York, to manage the affairs of government. About 1664, a settlement commenced on the east side of Connecticut River. In 1667, Lyme was made a distinct town. In this and the next year, several new settlements were made, and new towns incorporated. On the 20th of May, 1662, a purchase was made of the Indians, and East Haddam settled by twenty-eight persons. In the session of May, 1670, it was enacted that Massacoe should be called Simsbury.

At the same term, New-Haven village was incorporated, and made a town, by the name of Wallingford. In 1643, war had been declared in England against the Dutch. The colony was put into a state of defence, and it was ordered that a troop of horse should be raised in each county. On the 30th of July, a small Dutch fleet arrived at New-York. One John Manning, who commanded the fort and island, treacherously delivered them to the enemy, without firing a gun or attempting the least resistance.

Scarcely had the colonies recovered from their calamities, before new and more terrible alarm and destruction presented themselves to all the colonies of New-England. On the first of July, 1674, the Duke of York commissioned Sir Edmund Andross to be governor of New-York, and all New-England. Sir Edmund was a tyrant over the people, but New-England refused to submit to this man as their ruler. It was soon discovered that Sir Edmund Andross was about to make a hostile invasion on the colony, and to demand its surrender. Detachments from the military were sent to New-London and Saybrook. Captain Thomas Bull, of Hartford, commanded the party at Saybrook.

About the 9th of July, 1675, the people of that town were surprised by the appearance of Major Andross, with an armed force in the sound, making directly for the fort. The fort was soon manned, and militia called out for its defence; at this moment Captain Bull arrived, which gave them fresh courage. On the 11th, Major Andross hoisted the king's flag on board, and demanded a surrender of the fortress and town; Captain Bull raised his majesty's colours, and prepared for defence. The major did not like to fire on the king's colours, and thought it would be a bloody affair to reduce the town by force. Early in the morning of the 12th, Sir Edmund desired to be admitted on shore.

Captain Bull met the major at his landing, and requested a treaty. The major rejected the proposal, and commanded, in his majesty's name, that the Duke's patent and his commission should be read. Captain Bull, in his majesty's name, commanded him to forbear reading. When his clerk attempted to proceed, Captain Bull again repeated his command with such energy, that it convinced the major it was not safe to proceed. The captain then acquainted him that he had an address from the assembly, and read his protest.

Governor Andross, pleased with his bold and soldier like appearance, said "What is your name?" He replied, "My name is Bull, sir." "Bull," said the governor,— "It is a pity your horns are not tipped with silver.

Finding he could make no impression upon the people, he soon sailed for New-York.

In the year 1675, began the famous Indian war, which was termed King Philip's war.

The leading one was Philip, sachem of the tribe living within the boundary of Plymouth, Rhode Island. His brother, being suspected of plotting against the whites, was seized by a detachment of soldiers. Philip ever sought to revenge the treatment of his brother. He succeeded in forming a confederacy able to send into action between three and four thousand warriors.

The immediate cause of the war was the execution of three Indians by the English, whom Philip had excited to murder one Susaman, an Indian missionary. Susaman, being friendly to the English, had informed them that Philip, with several tribes, were plotting their destruction.

The execution of these Indians roused the anger of Philip, who immediately armed his men, and commenced hostilities. Their first attack was made June 24th, upon the people of Swanzey, in Plymouth colony, as they were returning home from public worship, on a day of humiliation and prayer, under the apprehension of the approaching war. Eight or nine persons were killed.

The country was immediately alarmed, and the troops of the colony flew to the defence of Swanzey. On the 28th, the company of horse and company of foot, with one hundred and ten volunteers from Boston, joined the Plymouth forces at Swanzey. The next morning, an attack was made upon some of Philip's men, who were pursued, and five or six of them killed. This resolute conduct of the English made a deep impression on the enemy. Philip with his forces left Mount Hope the same night; marking his route, however, with the burning of houses, and the scalping of the defenceless inhabitants.

It being known that the Narragansets favoured the cause of Philip, he having sent his women and children to them for protection, the Massachusetts forces, under Captain Hutchinson, proceeded forthwith into their country, to renew a treaty with them, or to give them battle. Fortunately, a treaty was concluded, and the troops returned.

On the 17th of July, news arrived that Philip, with his warriors, was in a swamp at Pocasset, now Tiverton. The Massachusetts and Plymouth forces immediately marched to that place, and the next day resolutely charged the enemy in their recesses. As the troops entered the swamps, the Indians continued to retire. The English, in vain pursued, till the approach of night, when the commander ordered a retreat. Many of the English were killed, and the enemy seemed to take courage.

It being impossible to encounter the Indians with advantage in the swamps, it was determined to starve them out; but Philip, apprehending their design, contrived to escape with his forces.

He now fled to the Nipmucks, a tribe in Worcester county, Massachusetts, whom he induced to assist him. This tribe had already commenced hostilities against the English; but, in the hope of reclaiming them, the governor and council sent Captains Wheeler and Hutchinson to treat with them. But the Indians, having intimation of their coming, lurked in ambush for them, fired upon them as they approached, killed eight men, and mortally wounded eight more, of whom Captain Hutchinson was one.

The remainder of the English fled to Quaboag, Brookfield. The Indians, however, closely pursued them into the town, and burnt every house excepting one, in which the inhabitants had taken refuge. This house at length they surrounded. "For two days they continued to pour a storm of musket balls upon it, and although countless numbers pierced through the walls, but one person was killed. With long poles, they next thrust against it brands, and rags dipped in brimstone; they shot arrows of fire; they loaded a cart with flax and tow, and with long poles fastened together, they pushed it against the house. Destruction seemed inevitable. The house was kindling, and the savages stood ready to destroy the first that should open the door to escape. At this awful moment a torrent of rain descended, and suddenly extinguished the kindling flames."

August 4th, Major Willard came to their relief, raised the siege, and destroyed a considerable number of the assailants.

Fighting the Indians.

During the month of September, Hadley, Deerfield, and Northfield, on Connecticut river, were attacked ; several of the inhabitants were killed, and many buildings consumed. On the 18th, Captain Lathrop, with several teams, and eighty young men, the flower of the county of Essex, were sent to Deerfield to transport a quantity of grain to Hadley. On their return, stopping to gather grapes at Muddy Brook, they were suddenly attacked by near eight hundred Indians. Resistance was in vain, and seventy of these young men fell before the merciless enemy, and were buried in one grave. Captain Mosely, who was at Deerfield, hearing the report of the guns, hastened to the spot, and, with a few men, attacked the Indians, killed ninety-six, and wounded forty, losing himself but two men.

Early in October, the Springfield Indians, who had hitherto been friendly to the English, concerted a plan, with the hostile tribes, to burn that town. Having, under cover of night, received two or three hundred of Philip's men into their fort, with the assistance of these, they set fire to the town. The plot, however, was discovered so seasonably, that troops arrived from Westfield in time to save the town, excepting thirty-two houses already consumed.

Soon after hostilities were commenced by Philip, the Tarrenteens began their depredations in New-Hampshire, and the province of Maine. They robbed the boats, and plundered the houses of the English. In September they fell on Saco, Scarborough, and Kittery, killed between twenty and thirty of the inhabitants, and consigned their houses, barns, and mills, to the flames.

Elated with these successes, they next advanced towards Piscataqua, committing the same outrages at Oyster River, Salmon Falls, Dover, and Exeter. Before winter, sixty of the English, in that quarter, were killed, and nearly as many buildings consumed.

The Indians in those parts, however, had real ground of complaint. Some seamen, hearing it reported that Indian children could swim by instinct, overset the canoe of Squando, sachem of the Saco Indians, in which were his squaw and infant child. This act Squando could not overlook, especially as, some time after, the child died, and, as

the sachem believed, on account of some injury that it then received. Besides this, several Indians had been enticed on board a vessel, carried off, and sold into slavery. To redress these wrongs, the Indians commenced hostilities.

Notwithstanding the Narragansetts had pledged themselves, by their treaty, not to engage in the war against the English, it was discovered that they were taking part with the enemy. It was deemed necessary, therefore, for the safety of the colonies, early to check that powerful tribe.

Accordingly, Governor Winslow, of Plymouth, with about one thousand eight hundred troops from Massachusetts and Connecticut, and one hundred and sixty friendly Indians, commenced their march from Pettyquamscot, on the 19th of December, 1675, through a deep snow, towards the enemy, who were in a swamp about fifteen miles distant.

The army arrived at the swamp at one in the afternoon. Some Indians, at the edge of the swamp, were fired upon, but fled. The whole army now entered, and pursued the Indians to their fortress.

This stood on a rising ground in the middle of the swamp. It was a work of great strength and labour, being composed of palisades, and surrounded by a hedge about sixteen feet in thickness.

One entrance only led to the fort, through the surrounding thicket. Upon this the English providentially fell; and, without waiting to form, rushed impetuously towards the fort. The English captains entered first. The resistance of the Indians was gallant and warlike. Captains Johnson and Davenport, with many of their men, fell at the entrance. At length the English gave back, and were obliged to retreat out of the fort.

At this crisis, the army being on the point of a fatal repulse, some Connecticut men, on the opposite side of the fort, discovered a place destitute of palisades; they instantly sprang into the fort, fell upon the rear of the Indians, and, aided by the rest of the army, after a desperate conflict, achieved a complete victory. Six hundred wigwams was now set on fire. The scene was awful. Deep volumes of smoke rolled up to heaven, mingling with the

dying shrieks of mothers and infants, while the aged and infirm were consuming in the flames.

Even at this distant period, we cannot recal this scen without pain, and can justify this severity of our ancestors, only by admitting its necessity for self-preservation.

The Indians in the fort were estimated at four thousand ; of these seven hundred warriors were killed, and three hundred died of their wounds ; three hundred were taken prisoners, and as many women and children. The rest, except such as were consumed, fled.

The victory of the English, complete as it was, was purchased with blood. Six brave captains fell ; eighty of the troops were killed, or mortally wounded, and one hundred and fifty were wounded, who recovered.

From this defeat the Indians never recovered. They were not yet, however, effectually subdued. During the winter they still continued to murder and burn. The towns of Lancaster, Medfield, Weymouth, Groton, Springfield, Northampton, Sudbury, and Marlborough, in Massachusetts, and Warwick and Providence, in Rhode-Island, were assaulted, and some of them partly, and others wholly destroyed. In March, Captain Pierce, with fifty English, and twenty friendly Indians, were attacked, and every Englishman, and most of the Indians, were slain. In April, Captain Wadsworth, marching with fifty men to the relief of Sudbury, was surrounded, and all either killed on the spot, or reserved for long and distressing tortures.

The success of the Indians, during the winter, had been great ; but, on the return of spring, the tide turned against them. The Narraganset country was scoured, and many of the natives were killed, among whom was Canonchet, their chief sachem.

On the 12th of August, 1676, the finishing stroke was given to the war in the United Colonies, by the death of Philip. After his flight from Mount Hope, he had attempted to rouse the Mohawks against the English. To effect his purpose, he killed, at several times, some of that tribe, and laid it to the English. But his iniquity was discovered, and he was obliged hastily to flee. He returned at length to Mount Hope.

Tidings of his return were brought to Captain Church

a man who had been of eminent service in this war, and who was better able than any other person to provide against the wiles of the enemy. Captain Church immediately proceeded to the place of Philip's concealment, near Mount Hope, accompanied by a small body of men. On his arrival, which was in the night, he placed his men in ambush round the swamp, charging them not to move till daylight, that they might distinguish Philip, should he attempt to escape. Such was his confidence of success, that, taking Major Sandford by the hand, he said, "It is scarcely possible that Philip should escape." At that instant a bullet whistled over their heads, and a volley followed.

The firing proceeded from Philip, and his men, who were in view. Perceiving his peril, the savage chief, desperately snatched his powder horn and gun, and ran fiercely towards the spot where an Englishman and Indian lay concealed. The English soldier levelled his gun, but it missed fire; the Indian fired, and shot Philip through the heart.

Captain Church ordered him to be beheaded, and quartered. The Indian who executed this order, pronounced the warrior's epitaph, "You have been one very great man. You have made many a man afraid of you. But so big as you be, I will now chop you to pieces."

Thus fell a savage hero and patriot—of whose transcendent abilities our history furnishes melancholy evidence. The advantage of civilized education, and a wider theatre of action, might have made the name of Philip of Mount Hope, as memorable as that of Alexander or Cæsar.

After the death of Philip, the war continued in the province of Maine, till the spring of 1678. But westward, the Indians having lost their chiefs, wigwams, and provisions, and perceiving further contest vain, came in singly by tens, and hundreds, and submitted to the English.

Thus closed a melancholy period in the annals of New England history; during which, six hundred men, the flower of her strength, had fallen; twelve or thirteen towns had been destroyed, and six hundred dwelling houses consumed. Every eleventh family was houseless, and every eleventh soldier had sunk in his grave. So costly was the inheritance which our fathers have transmitted to us

William Penn's Treaty with the Indians, 1682.—Page 85.

Capture of Quebec, and Death of General Wolfe, Sept. 12, 1752.—Page 131.

Never was peace more welcome ; for never had war been more distressing. The whole population was mourning for their relatives slain. The colonies had contracted a large debt, which their resources, having been so much diminished, they found an almost insupportable burden, yet they forebore to apply to their mother country for assistance, which excited jealousy. "You act," said a privy counsellor, "as though you were independent ; although poor, you are proud."

In 1680, it appears that there were twenty-six towns in New-England ; that the militia, including horse and foot consisted of two thousand five hundred and seven men ; that the annual exports were about nine thousand pounds. There were in the colony about twenty small merchants trading to Boston, New-York, Newfoundland, and the West-Indies ; and the shipping consisted of four ships, three pinks, eight sloops, and other small vessels, amounting to about twenty-seven in number, the tonnage of which was only one thousand and fifty. The number of inhabitants was nearly twelve thousand.

In 1682, East-Jersey passed from Carteret to William Penn, and twenty-three associates, mostly of the Quaker persuasion.

In April, Penn published a frame of government. The chief object was declared to be, to support power and reverence among the people. This year, William Penn laid out Philadelphia for his capital, which grew rapidly. In 1683, Penn held the second assembly in his new capital, and presided in the council. The lasting prosperity of Pennsylvania, the foundation of which must be traced to his wisdom and benevolence, is an eloquent eulogium upon his character.

In 1684, King James established a temporary government over the colony, first appointing Joseph Dudley and in 1686, he appointed Sir Edmund Andross to be governor of New-England. Sir Edmund had been governor of New-York, and it was known that his conduct there had been arbitrary and tyrannical. In October, Sir Edmund, with a guard of about sixty regular troops, went to Hartford.

The assembly met, as usual, in October, and the go-

vernment continued according to charter, until the last of the month. About this time, Sir Edmund, with his suit and more than sixty regular troops, came to Hartford when the assembly were sitting, demanded the charter and declared the government under it to be dissolved. The assembly were extremely reluctant and slow with respect to any resolve to surrender the charter, or with respect to any motion to bring it forth. The tradition is, that Governor Treat strongly represented the great expense and hardships of the colonists, in planting the country—the blood and treasure which they had expended in defending it, both against the savages and foreigners; to what hardships and dangers he himself had been exposed for that purpose; and that it was like giving up his life, now to surrender the patent and privileges, so dearly bought, and so long enjoyed.

The important affair was debated and kept in suspense, until the evening, when the charter was brought and laid upon the table, where the assembly was sitting. By this time, great numbers of people were assembled, and men sufficiently bold to enterprise whatever might be necessary or expedient. The lights were instantly extinguished, and one Captain Wadsworth, of Hartford, in the most silent and secret manner, carried off the charter, and secreted it in a large hollow tree, fronting the house of the Hon. Samuel Wyllys, then one of the magistrates of the colony. The people appeared all peaceably and orderly. The candles were officiously re-lighted; but the patent was gone, and no discovery could be made of it, or of the person who had conveyed it away. Sir Edmund assumed the government, and the records of the colony were closed in the following words:

“At a general court at Hartford, October 31st, 1687, his excellency, Sir Edmund Andross, knight, and captain-general and governor of his majesty's territories and dominions in New-England, by order from his majesty, James the Second, king of England, Scotland, France, and Ireland, the 31st of October, 1687, took into his hands the government of the colony of Connecticut, it being, by his majesty, annexed to Massachusetts, and other colonies under his excellency's government.”

Sir Edmund appointed officers, civil and military, through the colony, according to his pleasure. He had a council, at first, consisting of about forty persons, and afterwards, of nearly fifty. Four of this number, governor Treat, John Fitz Winthrop, Wait Winthrop, and John Allen, Esquires, were of Connecticut.

Sir Edmund began his government with the most flattering professions of his regard to the public safety, and happiness. He instructed the judges to administer justice as far as might be consistent with the new regulations, according to the former laws and customs. It is, however, well observed by Governor Hutchinson, that "Nero concealed his tyrannical disposition more years, than Sir Edmund and his creatures did months." He soon laid a restraint upon the liberty of the press, and then one far more grievous upon marriage.

This was prohibited, unless bonds were previously given, with sureties, to the governor. These were to be forfeited, in case it should afterwards appear, that there was any lawful impediment to the marriage. Magistrate only were allowed to join people in the bands of wedlock. The governor not only deprived the clergy of the perquisite from marriages, but soon suspended the laws for their support, and would not suffer any person to be obliged to pay any thing to his minister. Nay, he menaced the people, that, if they resisted his will, their meeting-houses should be taken from them, and that any person who should give two pence to a non-conformist minister, should be punished.

The fees of all officers, under this new administration, were exorbitant. The common fee for the probate of a will was fifty shillings. The widow and fatherless, how distant soever, were obliged to appear at Boston, to transact all business relative to the settlement of estates. This was a grievous oppression of the poor people, especially of the fatherless and widow.

Sir Edmund, without an assembly, nay, without a majority of his council, taxed the people at pleasure. He and Randolph, with four or five others of his creatures, who were sufficiently wicked to join with him, in all his oppressive designs, managed the affairs of government

as they pleased. But these were but the beginnings of oppression and sorrow. They were soon greatly increased, and more extensively spread.

In 1688, Sir Edmund was made governor of New-York, as well as of New-England, and the same kind of government was exercised in that department. As the charters were now either vacated, surrendered, or the government under them suspended, it was declared that the titles of the colonists to their lands were of no value. Sir Edmund declared, that Indian deeds were no better than "the scratch of a bear's paw." Not the fairest purchases, and most ample conveyances from the natives, no dangers, disbursements, nor labours, in cultivating a wilderness, and turning it into orchards, gardens, and pleasant fields, no grants by charter, nor by legislatures constituted by them, no declarations of preceding kings, nor of his then present majesty, promising them the quiet enjoyment of their houses and lands, nor fifty or sixty years undisturbed possession, were pleas of any validity or consideration with Sir Edmund and his minions.

The purchasers and cultivators, after fifty and sixty years improvement, were obliged to take out patents for their estates. For these, in some instances, a fee of fifty pounds was demanded. Writs of intrusion were issued against persons of principal character, who would not submit to such impositions, and their lands were patented to others. Governor Hutchinson observes, with respect to Massachusetts, that "men's titles were not all questioned at once. Had this been the case, according to the computation then made, all the personal estate in the colony would not have paid the charge of the new patents."

The governor, and a small number of his council, in the most arbitrary manner, fined and imprisoned numbers of the inhabitants of Massachusetts, and denied them the benefit of the act of habeas corpus. All town meetings were prohibited, except one in the month of May, for the election of town officers, to prevent the people from consulting measures for the redress of their grievances. No person, indeed, was suffered to go out of the country, without leave from the governor, lest complaints should be carried to England against his administration. At th

same time, he so well knew the temper and views of his royal master, that he feared little from him, even though complaints should be carried over against him. Hence he and his dependants oppressed the people, and enriched themselves without restraint.

The most humble petitions were presented to his majesty, from corporations of various descriptions, beseeching him that the governor's council might consist of none but men of considerable property in lands; that no act might be passed to bind the people, but by a majority of the council; and that he would quiet his good subjects in the enjoyment of all property in houses and lands.* But in the reign of James the Second, petitions so reasonable and just could not be heard.

The prince at home, and his officers abroad, like greedy harpies, preyed upon the people without control. Randolph was not ashamed to make his boast, in his letters, with respect to Governor Andross and his council, "that they were as arbitrary as the great Turk." All New-England groaned under their oppression. The heaviest share of it, however, fell upon the inhabitants of Massachusetts and New-Plymouth. Connecticut had been less obnoxious to government than Massachusetts, and as it was further removed from the seat of government, was less under the notice and influence of those oppressors.

Governor Treat was a father to the people, and felt for them, in their distressed circumstances. The other gentlemen, who were of the council, and had the principal management of affairs, in Connecticut, were men of principle, lovers of justice, and of their fellow subjects. They took advantage of Sir Edmund's first instructions, and, as far as they possibly could, consistently with the new regulations, governed the colony according to the former laws and customs. The people were patient and peaceable, though in great fear and despondency. They were no strangers to what was transacted in the neighbouring

* Sir Edmund, with all his vigilance, could not prevent the carrying over of complaints against him. Mr. Increase Mather got on board a ship, and sailed to England, for this very purpose, and delivered the complaints, which he carried over, into his majesty's hands.

colonies, and expected soon fully to share with them, in all their miseries.

It was generally believed that Andross was a papist; that he had employed the Indians to ravage the frontiers, and had supplied them with ammunition; and that he was making preparations to deliver the country into the hands of the French. All the motives to great actions, to industry, economy, enterprise, wealth, and population, were in a manner annihilated. A general inactivity and languishment pervaded the whole public body. Liberty, property, and every thing which ought to be dear to men, every day grew more and more insecure. The colonies were in a state of general despondency, with respect to the restoration of their privileges, and the truth of that divine maxim, "when the wicked beareth rule, the people mourn," was, in a striking manner, every where exemplified.

In 1690, war was declared between France and England. Count Frontinac was appointed governor in Canada. In January, he despatched several parties against the English settlements. One of them was sent against Albany, but resolved to attack Schenectady. The inhabitants of this village got information of their danger, but they judged it impossible for the enemy to march several hundred miles in the depth of winter, and disregarded the intelligence. No regular watch was kept, nor military order observed.

The French and Indians arrived near the town on the 8th of February. On Saturday night, at eleven o'clock, they entered the gates, which they found open: universal silence reigned. In a few moments, all the houses were in flames. Women were butchered, and children thrown alive into the flames; sixty persons perished in the flames; twenty-five persons made prisoners; while the rest of the inhabitants fled naked. A furious storm came on. Albany, their only refuge, was at a distance. A part arrived in safety; twenty-five lost their limbs by the severity of the cold. No tongue can express the cruelties which were committed. The second party directed their course to New-Hampshire, burned the village at Salmon Falls, killed twenty-six of the bravest men, and took fifty pri

soners. The third party destroyed Casco, in Maine, and killed and captured ninety-five people.

To avenge these barbarities, and others perpetrated in New-England, a combined expedition against Canada was proposed. An army was raised in New-York and Connecticut, which proceeded as far as the head of Lake Champlain, but not finding boats to cross the lake, were obliged to return. Sir William Phipps, with a fleet of about 30 vessels, sailed from Boston into the St. Lawrence, and landing a body of troops, made an attack by land and water upon Quebec; but was unsuccessful.

This year, 1691, Colonel Henry Sloughter succeeded Colonel Leisler, governor of New-York. Leisler, when informed of this appointment, ought to have relinquished the authority he had exercised. Although twice required, he refused to surrender the fort. Sloughter caused Leisler and Milborne to be arrested and executed for high treason.

In July, 1691, Peter Schuyler, at the head of three hundred Mohawks, made a sudden and bold attack upon the French settlements at the north end of Lake Champlain. An army of eight hundred men was despatched from Montreal to oppose him. With them he had several singular, but successful conflicts, in which he killed a greater number of the enemy than his whole party.

In 1692, Colonel Fletcher succeeded governor Sloughter, and was authorized by his commission, to take command of the militia of Connecticut. This power having been given by the charter to the governor of the colony of New-England, he determined not to relinquish it, and was supported by the people.

On the 26th of October, Colonel Fletcher came to Hartford, while the assembly was sitting, and in his majesty's name, demanded their submission of the militia to his command, as they would answer it to his majesty; and that they would give him a speedy answer in one word, Yes or no. He subscribed himself his majesty's lieutenant, and commander-in-chief of the militia, and of all the forces by sea or land, and of all the forts and places of strength, in the colony of Connecticut. He ordered the

militia of Hartford under arms, that he might beat up for volunteers.

It was judged expedient to call the trainbands in Hartford together; but the assembly insisted, that the command of the militia was expressly vested, by charter, in the governor and company; and that they could, by no means, consistently with their just rights and the common safety, resign it into any other hands. They insinuated, that his demands were an invasion of their essential privileges, and subversive of their constitution.

Upon this, Colonel Bayard, by his excellency's command, sent a letter into the assembly, declaring, that his excellency had no design upon the civil rights of the colony; but would leave them, in all respects, as he found them. In the name of his excellency, he tendered a commission to Governor Treat, empowering him to command the militia of the colony. He declared that his excellency insisted, that they should acknowledge it an essential right, inherent in his majesty, to command the militia: and that he was determined not to set his foot out of the colony, until he had seen his majesty's commission obeyed: That he would issue his proclamation, showing the means he had taken to give ease and satisfaction to his majesty's subjects of Connecticut, and that he would distinguish the disloyal from the rest.

The assembly, nevertheless, would not give up the command of the militia, nor would Governor Treat receive a commission from Colonel Fletcher.

The trainbands of Hartford assembled, and, as the tradition is, while Captain Wadsworth, the senior officer, was walking in front of the companies, and exercising the soldiers, Colonel Fletcher ordered his commission and instructions to be read. Captain Wadsworth instantly commanded, "Beat the drums;" and there was such a roaring of them that nothing else could be heard. Colonel Fletcher commanded silence. But no sooner had Bayard made an attempt to read again, than Wadsworth commands, "Drum, drum, I say." The drummers understood their business, and instantly beat up with all the art and life of which they were masters. "Silence, silence," says the colonel. No sooner was there a pause,

than Wadsworth speaks with great earnestness, "Drum, drum, I say;" and turning to his excellency, said, "If I am interrupted again, I will make the sun shine through you in a moment." He spoke with such energy in his voice, and meaning in his countenance, that no further attempts were made to read or enlist men. Such numbers of people collected together, and their spirits appeared so high, that the governor and his suite judged it expedient soon to leave the town, and return to New-York.

No pen can describe the cruelties which were practised during the French and Indian war. Women, soon expecting to become mothers, were ripped up, and their unborn offspring dashed against a stone or tree. Infants when troublesome, were dispatched in the same manner. Some of the captives were roasted alive; others received deep wounds in the flesh, and sticks on fire thrust into them, and were thus tormented to death.

1694. Upon the solicitations of Governor Fletcher and Sir Willam Phipps, agents, with a number of troops, were sent to attend a treaty with the Five Nations. The expense of it was about four hundred pounds.

December 10th, 1697, closed the horrid scene, by a treaty of peace between Great Britain and France.

The winter of 1696 was unusually severe. Never had the country sustained such losses in commerce, nor had provisions ever been so scarce, or borne a higher price.

The surprise of Dover, in New-Hampshire, was attended by circumstances of the most shocking barbarity. That the natives had been cruelly injured by Major Waldron, the principal citizen, may account for it, if not extenuate their ferocity, in obtaining revenge. Having determined upon their plan of attack, they employed more than their usual art to lull the suspicions of the inhabitants. So civil and respectful was their behaviour, that they often obtained permission to sleep in the fortified houses in the town.

On the fatal evening they assembled in the neighbourhood, and sent their women to apply for lodgings at the houses devoted to destruction; they were not only admitted, but were shown how they could open the doors, should they have occasion to go out in the night. When

all was quiet, the doors were opened, and a signal given. The Indians rushed into Mr. Waldron's house, and hastened to his apartment. Awakened by the noise, he seized his sword, and drove them back ; but when returning for his other arms, he was stunned with a hatchet, and fell.

They then dragged him into the hall, seated him in an elbow chair, upon a large table, and insultingly asked him, " who shall judge Indians now ?" each one, with his knife, cut gashes across his breast, saying, " I cross out my account." When weakened with the loss of blood, he was about to fall from the table, his own sword was held under him, which put an end to his misery.

At other houses, similar acts of cruelty were perpetrated. In the whole town twenty-three persons were killed, twenty-nine carried prisoners to Canada, and sold to the French.

The details of individual sufferings that occurred during this war, were they faithfully recorded, would excite the sympathies of the most unfeeling bosom. One instance only will serve to confirm the remark.

In an attack, by a body of Indians, upon Haverhill, New-Hampshire, in the winter of 1697, the concluding year of the war, a party of the assailants, burning with savage animosity, approached the house of a Mr. Dustan. Upon the first alarm, he flew from a neighbouring field to his family, with the hope of hurrying them to a place of safety. Seven of his children he directed to flee, while he himself went to assist his wife, who was confined in her bed with an infant a week old ; but before she could leave the bed the savages arrived.

In despair of rendering her assistance, Mr. Dustan flew to the door, mounted his horse, and determined in his own mind to snatch up the child which he loved best. He followed in pursuit of his little flock, but, on coming up with them, he found it impossible to make a selection. He determined, therefore, to meet his fate with them ; to defend and save them from the knife of the pursuing savages, or die by their side.

A body of the Indians soon came up with them, and, from short distances, commenced a fire upon him and his

little company. For more than a mile he continued to retreat, placing himself between the fire of the Indians and his children, and returned their shots with great spirit and success. At length he saw them all safely lodged from their bloody pursuers, in a distant house.

It is not easy to find a nobler instance of fortitude and courage, inspired by affection, than is exhibited in this heroic act. Let us ever cultivate the influence of those ties of kindred, which are capable of giving so generous and elevated a direction to our actions.

As Mr. Dustan quitted his house, a party of Indians entered it. Mrs. Dustan was in bed, but they ordered her to rise instantly, and, before she could finish dressing, obliged her, and the nurse, who had in vain attempted to escape with the infant, to quit the house, which they plundered and burnt.

In these distressing circumstances, Mrs. Dustan began her march, with other captives, in the wilderness. The air was keen, and their path led through snow and deep mud, and their savage conductors delighted rather in their affliction, than in alleviating their distress.

The company had proceeded but a short distance, when an Indian, thinking the infant an incumbrance, took it from the arms of the nurse, and violently terminated its life. Such of the other captives as became weary and incapable of proceeding, the Indians killed with their tomahawks. Feeble as Mrs. Dustan was, both she and her nurse sustained, with wonderful energy, the fatigues and misery attending a journey of one hundred and fifty miles.

On their arriving at the place of their destination, they found the wigwam of the savage who claimed them, to be inhabited by twelve Indians. In the ensuing April, this family set out, with their captives, for an Indian settlement, still more remote. The captives were informed, that on their arrival at the settlement, they must submit to be stripped, scourged, and run the gauntlet between two files of Indians. This information carried distress to the minds of the captive women, and led them promptly to devise some means of escape.

Early in the morning of the 31st of April, Mrs. Dustan awaking her nurse, and another fellow prisoner, they dis-

patched ten of the twelve Indians, while they were asleep; the other two escaped. The women then commenced their difficult and dangerous journey through the wilderness, and at length arrived safe at Haverhill. Subsequently they visited Boston, and received from the general court a handsome consideration for their extraordinary sufferings and heroic conduct.

In 1698, the Earl of Bellamont was appointed governor. He was particularly instructed to clear the American seas of the pirates who infested them, and who, it was suspected, had even received encouragement from Governor Fletcher.

The government declining to furnish the necessary naval force, the earl, with others, engaged in a private undertaking against them. The association procured a vessel of war; gave the command of it to a Captain Kidd, and sent him to cruise against the pirates. He had been but a short time at sea, when, disregarding his instructions, he made a new contract with his crew, and on the Atlantic and Indian Ocean became himself a daring, atrocious, and successful pirate. Three years afterwards, he returned, burned his vessel, and appeared publicly in Boston. He was apprehended and sent to England, where he was tried, and executed.

When Governor Bellamont had settled the affairs of that government, he returned to New-York, where he died in 1701, greatly lamented.

Scarcely had the colonies recovered from the war which ended in 1697, before they were again involved in the horrors of another war with the French, Indians and Spaniards, which continued from 1702 to March 31, 1713.

In February, 1704, Deerfield, in Massachusetts, was surprised in the night. About 40 persons were killed, and 150 made prisoners, among whom were, Mr. Williams, the minister, and his family. They came to the house of Mr. Williams, forced open the doors, and entered the room where Mr. Williams was sleeping. Awakened by the noise, he seized his pistol, and snapped it at the first Indian, but it missed fire, the house was then plundered, and two of his children and the black female servant, were butchered before his eyes. The savages at length suffered his wife

and himself, with five children, to put on their clothes, and prepare for a long journey. Every house but the one next to Mr. Williams' was consumed.

“One house still remains, as a painful memento to posterity. The front door was hacked and hewn with hatchets, until the savages had cut a hole through it; through this hole, they fired into the house; this door, which still bears its ancient wounds, and the hole, (closed only by a board, tacked on within,) remains now as the savages left it, and is a most interesting monument.

“Through the windows they also fired, and one bullet killed the female head of the family, sitting up in bed, and the mark of that bullet, as well as of four others, is visible in the room; in one of the holes in a joist, another bullet remains to this day. This family were all killed or carried into captivity.”

The second day, Mrs. Williams began to fail, and could go no farther. Her husband requested permission to remain with her; but they plunged a hatchet into her head, and compelled him to proceed. Before the termination of their journey, twenty more shared the same fate. Those who reached Canada, were treated with humanity by the French.

At the end of two years, Mr. Williams, and fifty-seven others, were redeemed, and he returned to Deerfield, where he continued his labours in the ministry twelve years, and died. His eldest daughter was married to an Indian in Canada, where she lived many years. She came into New-England once or twice, with her sannup and children, to visit her friends, and at her death left a numerous family.

In 1707, Massachusetts, Rhode Island, and New-Hampshire, despatched an armament against Port Royal, in Nova-Scotia, which was in possession of the French. The expedition consisted of one thousand men; but returned without accomplishing its object.

General Nicholson visited England, and proposed an expedition against Canada. In June, 1711, Admiral Walker, with a fleet of fifteen ships of war, and forty transports, arrived at Boston, and taking on board two additional regiments, he sailed from Boston the last of July

At the same time, General Nicholson proceeded from Albany, at the head of four thousand men, from Connecticut, New-York, and New-Jersey, against Canada.

The fleet had advanced about ten leagues up the river St. Lawrence, when the river became foggy. Different opinions arose concerning what course to take; the English pilots recommended one course, the Americans another. The admiral, like all other English officers, adopted the advice of his own pilots; and, about midnight, nine transports were driven upon the rocks, and dashed to pieces. About one thousand men sunk to rise no more.

Not a single American was lost. The admiral returned to England, and, on the 15th of October, his ship blew up, and four hundred seamen perished. The New-England troops returned home, and when Nicholson, who had advanced as far as Lake George, learned the fate of the fleet, he led back his troops to Albany. The next year, 1713, France and England made peace at Utrecht; this relieved the northern part of the country, and in the same year peace was concluded with the Indians.

Such was the destruction of lives in this war, that the population of New-England was sensibly decreasing. The expenses were great, which obliged them to issue bills of credit, or paper money, which perplexed the government in all their transactions.

In 1716, Samuel Street, a colonel in the army of the celebrated Duke of Marlborough, was appointed governor. On his arrival in the province, he found the people divided into parties; one in favour of a public bank, which had just been established; the other for a private bank.

He joined the former; the latter became hostile, and, led by a Mr. Cook, opposed with virulence all his measures.

In 1715, after several years of profound peace, an Indian war broke out in South Carolina. All the tribes, from Florida to Cape Fear, had been long engaged in a conspiracy against the whites. On the morning of the 15th of April, the first blow was struck at the settlements around Port Royal. Ninety persons were massacred. Some of the inhabitants escaped by embarking on board

a vessel which then lay in the harbour, and sailed directly for Charleston. At a plantation on Goose Creek, seventy whites, and forty faithful negroes, being protected by a breast-work, determined to maintain their post; but on the first attack, their courage failed them, and they agreed to surrender. The instant they fell into the power of the enemy, all were barbarously murdered.

Governor Craven, from North Carolina, at the head of one thousand men, marched against the savages. He discovered several small parties, who fled before him. At Saltcatchers, he found them all assembled, and there an obstinate and bloody battle was fought. The whites were victorious, and compelled the enemy to leave the province. Most of them fled to Florida, and were kindly received by the Spaniards.

In 1719, at a general review of the militia at Charleston, occasioned by a threatening invasion of the colony from Florida, the officers and soldiers bound themselves by a solemn compact, to support each other in resisting the tyranny of the proprietors; and the assembly, which was then in session, requested the governor, by a respectful address, to consent to administer the government in the king's name. He refused, and by proclamation dissolved the assembly. The members immediately met, and elected Colonel James Moore their governor. He was a bold man, and exceedingly well qualified for a popular leader, in a turbulent season. He accepted the appointment, and administered the affairs of the colony.

The conduct of the proprietors, and people, was brought before his majesty's council. After a full hearing, it was decided, that both colonies should be taken under the protection of the crown. In 1719, Hunter, Governor of New-York, quitted the province, and his authority devolved on Peter Schuyler. The next year, William Burnet, son of the celebrated bishop, was appointed governor. Turning his attention towards the wilderness, he perceived that the French, in order to secure themselves the Indian trade, and confine the English to the sea coast, were erecting forts, from St. Lawrence to the Mississippi. He endeavoured to defeat these designs, by building a trading house and fort at Oswego, on Lake Ontario. But the French

applied with great activity in accomplishing their object; they launched two vessels upon the lake, and erected a fort at Niagara; they had previously erected Fort Frontenac, commanding the outlet.

The peace of 1713, was of short duration. In 1722, the eastern Indians began to be hostile, murdering several persons, and burning the town of Brunswick. In 1723 Dover was surprised, and several persons killed, and a number carried into captivity; and in 1724, repeated attacks were made, and the English kept in a continual alarm. Numbers were killed. The English in their turn made an attack upon Norridgeway; killed Ralled, the Jesuit, and about eighty-seven Indians. The war now raged with violence, until 1726, when peace was restored. This treaty was greatly applauded, and under it, owing to the more pacific feelings of the Indians, and more faithful observance of the English, the colonies experienced unusual tranquillity for a long time.

The Settlement of Georgia, in June, 1732.

Several benevolent gentlemen in England, suggested a plan of conveying all the indigent subjects of Great Britain thither. To a project springing from motives so noble, the people and the government extended their patronage. In November, 1732, one hundred emigrants embarked for Georgia. The next year, five hundred persons arrived at that place. But it was soon discovered, that these people had become poor by their idleness, and were not fitted to fill the groves of Georgia.

The trustees therefore offered to receive such as had become poor by unavoidable misfortune, and grant to each one who should repair to the colony, fifty acres of land. This offer brought more than four hundred persons into Georgia.

In 1738, a disturbance was created among the negroes in South Carolina. A number of them assembled at Stono, surprised and killed two white men who had the charge of a ware-house, from which they took guns and ammunition. They then chose a captain, and with drums proceeded southward, burning every house, and killing

all the whites that fell in their way, and compelled all the negroes to join them. Governor Bull, who was returning from the southward, accidentally met them, hastened out of the way, and spread the alarm.

The news soon reached Wiltown, where a large congregation were attending divine service. The men, according to the law, brought their arms to the place of worship, and marched directly in quest of the negroes. While in an open field, they were dancing with frantic exultation at their late success, they were suddenly attacked by the whites; a number were killed, some fled, and the remainder taken. They who had been compelled to join them were pardoned; but all the leaders suffered death. About twenty whites were murdered.

In 1744, war again broke out between England and France, and the colonies were involved. Their commerce and fisheries suffered great injury from privateers fitted out at Louisburg, a French port on Cape Breton. Its situation was important. Nearly six millions of dollars had been expended on its fortification. It was of great importance that the colonies should destroy or take possession of this strong hold, although it was considered impossible. Having exacted of the general court an oath of secrecy, the governor, in January, 1745, communicated to them the project. Many heard it with amazement.

So strong was the place, and so weak were the colonies, that the thoughts of attacking it seemed rash and presumptuous. The secret was disclosed by an honest member, who prayed for divine blessing on the attempt, if it should be made. The people were instantly struck with the advantage of possessing the place. When the decision was made known, a petition, signed by a large number of merchants, was presented to the general court, praying them to comply with the governor's proposals. The subject was again discussed, and the vote in favour of the expedition was only one majority.

The question was now decided, and all who were before averse to the enterprise, united heartily with the supporters, to carry it into execution. The other New-England colonies agreed to furnish assistance, and a boat

was despatched to Commodore Warren, in the West Indies, to invite him to their assistance. In two months, an army of more than four thousand men were enlisted, clothed, victualled, and equipped for service, in the four New-England colonies, which did not contain four hundred thousand inhabitants.

On the 23d of March, the despatch boat returned from the West Indies, with information that Commodore Warren declined furnishing any aid, without orders from England. This intelligence was kept a secret. About the 19th of April, the troops, together with those from Connecticut and New-Hampshire, arrived safely at Canso. Commodore Warren had but just despatched his answer, when he received orders to repair to Boston, with such ships as he could spare, and concert measures with Governor Shirley, for his majesty's service in North America. He sailed immediately, but learning that the transports had sailed for Canso, he steered directly for that place. He added much to the naval strength.

Several vessels of war, which had been sent to cruise before Louisburg, had captured several French ships, and prevented any intelligence of the expedition from reaching them. Those vessels were daily within sight of the place, but were supposed to be privateers, and caused no alarm. The appearance of the fleet on the 30th of April, gave the French the first intimation of their danger. The troops immediately landed, and the next day, four hundred marched around the hills, approached within a mile of the grand battery, setting fire to all the houses and stores on the way. Many of these contained tar and pitch, which produced a thick smoke, that completely enveloped the invaders. The fears of the French were increased by their uncertainty. They imagined all the army was coming upon them, and throwing their powder into a well, destroyed the battery, which the English took without loss.

This was uncommon good fortune; but the most difficult labour of the siege remained to be performed. The cannon were to be drawn nearly two miles, over a deep morass, in plain view, and within gunshot of the enemy's principal fortification. For fourteen nights, the troops,

with straps over their shoulders, and sinking to their knees in mud, were employed in the service. By the 20th of May, they had erected five batteries, one of which mounted five forty-two pounders, and did great execution.

Meanwhile, the fleet cruised in the harbour, and was equally successful. It captured a French ship of sixty-four guns, loaded with stores for the garrison, to whom the loss was distressing. English ships of war were continually arriving, and added such strength to the fleet, that a combined attack upon the town was resolved upon. The enemy, discovering this design, deemed it unwise to run the hazard of an assault. On the 15th of June, the French commander proposed a cessation of hostilities, and on the 17th capitulated.

Intelligence of this event spread like lightning through the country. The French flag was still standing upon the walls of Louisburg, which decoyed several India ships, supposed to be worth six hundred thousand pounds. Well might the citizens of New-England be elated with these glad tidings. Without even a suggestion from the mother country, their commerce and fisheries were now secure.

France, fired with resentment at her loss, made extraordinary exertions to retrieve it, and to inflict chastisement on New-England. The next summer, she despatched to the American coast a powerful fleet, carrying a large number of soldiers. The news of its approach spread terror throughout New-England. But an uncommon succession of disasters, which the pious of that time attributed to the special interposition of Providence, deprived it of all power to inflict injury. After remaining a short time on the coast, it returned to France; having lost two admirals, both of whom, it was supposed, put an end to their lives through chagrin; having also, by tempest, been reduced to one half its force, and effected nothing.

In 1748, peace was concluded; each party restored all its prisoners and conquests; a striking, but not uncommon illustration of the folly of war. Louisburg, thought conquered by the colonies, was exchanged by Great Bri

tain for territories which she had lost in Europe. New England murmured at this injustice, but what avail the murmurs of the weak?

In 1750, an act was passed, prohibiting the exportation of hats out of the plantations of America, and to restrain the number of apprentices taken by hat makers; also, an act providing a penalty of one hundred pounds for the erection of any mill for slitting or rolling of iron, or any plating forge to work with a tilt hammer.

CHAPTER V.

French and Indian War, which commenced in 1756, and continued to 1763.

The war which ended in 1748, for a short period, gave peace to America, and the population in the thirteen colonies, amounted to one million and one hundred thousand. Scarcely had the colonies time to reap the benefits of peace, before their prospect was clouded, and the sound of war filled the land with general anxiety and distress. In 1756, the 18th of May, Great Britain declared war against France.

The general cause leading to this war, commonly called the French and Indian war, was the encroachment of the French upon Nova-Scotia, which had been ceded to Great Britain by the 12th article of the treaty of Utrecht. About this time, a company of English traders established trading houses on the banks of the Ohio.

The French seized some of the traders, and conveyed them prisoners to Canada. A tribe of Indians in Ohio, among whom the English had been trading, resented the seizure, and by way of retaliation, took several French traders, and sent them to Pennsylvania. The Ohio company complained to Dinwiddie, governor of Virginia, who laid the subject before the assembly, which ordered a messenger to be despatched to the French commander in Ohio, and require him to withdraw his troops.

Our beloved Washington happening to hear of it, in

Captain Wadsworth secreting the Connecticut Charter.—Page 86.

Washington's Journey to Ohio.—Page 105.

stantly waited on his excellency, and offered his services, but not without being terribly afraid lest his want of a beard should go against him. However, the governor was so charmed with his modesty and manly air, that he never asked him a syllable about his age, but after thanking him for "*a noble youth*," and insisting on his taking a glass of wine with him, slipped a commission into his hand. The next day, accompanied by an interpreter and a couple of servants, he set out on his expedition, which was, from start to pole, as disagreeable and dangerous as any thing Hercules himself could have wished. Soaking rains, chilling blasts, roaring floods, pathless woods, and mountains clad in snows, opposed his course, but opposed in vain. The glorious ambition to serve his country imparted an animation to his nerves, which rendered him superior to all difficulties.

Returning homewards, he was waylaid and shot at by a French Indian, and though the copper coloured ruffian was not 15 steps distant when he fired at him, yet not even so much as the smell of lead passed on the clothes of our young hero. On his return to Virginia, it was found that he had executed his negotiations, both with the French and Indians, with such fidelity and judgment, that he received the heartiest thanks of the governor and council for the very important services he had done his country.

He was now (in the 20th year of his age) appointed major and adjutant-general of the Virginia forces. Soon after this, the Indians continuing the encroachments, orders were given by the English government, for the colonies to arm and unite in one confederacy. Virginia took the lead, and raised a regiment of four hundred men, at the head of which she placed her darling Washington.

With this handful of brave fellows, Col. Washington, not yet 23 years of age, boldly pushed out into the Indian country, and there for a considerable time, Hannibal-like, maintained the war against three times the number of French and Indians. At the Red-Stones he came up with a strong party of the enemy, whom he engaged and effectually defeated, after having killed and taken thirty-one men. From his prisoners he obtained undoubted intelli-

gence, that the French forces on the Ohio consisted of upwards of a thousand regulars, and many hundreds of Indians.

But notwithstanding this disheartening advice, he still pressed on undauntedly against the enemy, and at a place called Little Meadows, built a fort, which he called Fort Necessity. Here he waited, hourly and anxiously looking for succours from New-York and Pennsylvania; but he looked in vain—nobody came to his assistance. Not long after this his small force, now reduced to three hundred men, were attacked by an army of 1100 French and Indians. Never did the true Virginian valour shine more gloriously than on this trying occasion.

To see three hundred young fellows—commanded by a smooth-faced boy—all unaccustomed to the terrors of war—far from home, and from all hopes of help—shut up in a dreary wilderness, and surrounded by four times their number of savage foes, and yet, without sign of fear, without thought of surrender, preparing for mortal combat. Oh! it was a noble sight!—Scarcely since the days of Leonidas, and his three hundred deathless Spartans, had the sun beheld its equal. With hideous whoops and yells the enemy came on like a host of tigers. The woods, and rocks, and tall tree tops, (as the Indians, climbing to the tops of the trees, poured down their bullets into the fort,) were in one continued blaze and crash of fire-arms.

Nor were our young warriors idle, but, animated by their gallant chief, plied their rifles with such spirit, that their little fort resembled a volcano in full blast, roaring and discharging thick sheets of liquid fire, and of leaden deaths among their foes. For three glorious hours, Salamander like, enveloped in smoke and flame, they sustained the attack of the enemy's whole force, and laid two hundred of them dead on the spot. Discouraged by such desperate resistance, the French general, the Count de Villiers, sent in a flag to Washington, extolling his gallantry to the skies, and offering him the most honourable terms. It was stipulated that Col. Washington, and his little band of heroes, should march away with all the ho-

nours of war, and carry with them their military stores and baggage.

The conduct of the French against the Ohio company, soon reached England. The English were convinced, that their claims to the country through which that river flows must be relinquished, or maintained by the sword. They soon chose the latter, and early in the spring of 1755, they despatched General Braddock with a respectable force to America, to expel the French, and keep possession of the territory.

In April, Braddock met the governors of several provinces to confer upon the plan of the ensuing campaign. Three expeditions were resolved upon; one against Du Quesne, to be commanded by General Braddock; one against forts Niagara and Frontinac, to be commanded by Governor Shirley, and one against Crown Point, by General Johnson. This last expedition was to be executed by troops raised in New-England and New-York.

In the spring of 1755, Washington, while busied in the highest military operations, was summoned to attend Gen. Braddock, who, in the month of February, arrived at Alexandria with two thousand British troops. The assembly of Virginia appointed eight hundred provincials to join him. The object of this army was to march through the country by the way of Will's Creek, to Fort Du Quesne, (now Pittsburgh, or Fort Pitt.) As no person was so well acquainted with the frontier country as Washington, and none stood so high in military fame, it was thought he would be infinitely serviceable to General Braddock.

At the request of the governor and council, he cheerfully quitted his own command, to act as volunteer aid-de-camp to that very imprudent and unfortunate general. The army, nearly three thousand strong, marched from Alexandria, and proceeded unmolested within a few miles of Fort Pitt. On the morning of the day in which they expected to arrive, the provincial scouts discovered a large party of French and Indians lying in ambush. Washington, with his usual modesty, observed to Gen. Braddock what sort of enemy he had now to deal with. An enemy who would not, like the Europeans, come for

ward to a fair contest in the field, but, concealed behind rocks and trees, carry on a deadly warfare with their rifles. He concluded with begging that Gen. Braddock would grant him the honour to let him place himself at the head of the Virginia riflemen, and fight them in their own way. And it was generally thought that our young hero, and his eight hundred hearts of hickory, would very easily have beaten them too, for they were not superior to the force, which (with only three hundred) he had handled so roughly a twelve month before.

But Gen. Braddock, who had all along treated the American officers and soldiers with infinite contempt, instead of following this truly salutary advice, swelled and reddened with most unmanly rage. "High times, by G-d," he exclaimed, strutting to and fro, with arms a-kimbo, "High times! when a young buckskin can teach a British general how to fight!" Washington withdrew, biting his lips with grief and indignation, to think what numbers of brave fellows would draw short breath that day, through the pride and obstinacy of one epauletted fool. The troops were ordered to *form*, and advance in *columns*, through the woods!!—In a little time, the ruin which Washington had predicted ensued. This poor devoted army, pushed on by their mad-cap general, fell into the fatal snare which was laid for them. All at once a thousand rifles began the work of death. The ground was instantly covered with the dying and the dead.

The British troops, thus slaughtered by hundreds, and by an enemy whom they could not see, were thrown irrecoverably into panic and confusion, and, in a few minutes, their haughty general, with 1200 of his brave but unfortunate countrymen, bit the ground. Poor Braddock closed the tragedy with great decency. He was mortally wounded in the beginning of the action, and Washington had him placed in a cart ready for retreat. Close on the left, where the weight of the French and Indian fire principally fell, Washington, and his Virginia riflemen, dressed in blue, sustained the shock. At every discharge of their rifles, the wounded general cried out, "O my brave Virginia blues! Would to God I could live to reward you for such gallantry." But he died. Washington

buried him in the road, and, to save him from discovery, and the scalping knife, ordered the wagons, on their retreat, to drive over his grave!—O, God! what is man? Even a thing of nought!

Amidst all this fearful consternation and carnage, amidst all the uproars and horrors of a rout, rendered still more dreadful by the groans of the dying, the screams of the wounded, the piercing shrieks of the women, and the yells of the furious assaulting savages, Washington, calm and self-collected, rallied his faithful riflemen, led them on to the charge, killed numbers of the enemy who were rushing on with tomahawks, checked their pursuit, and brought off the shattered remains of the British army.

With respect to our beloved Washington, we cannot but mention here two very extraordinary speeches that were uttered about him at this time, and which, as things have turned out, look a good deal like prophecies. A famous Indian warrior, who assisted in the defeat of Braddock, was often heard to swear, that Washington was not born to be killed by a bullet; “for,” continued he, “I had seventeen fair fires at him with my rifle, and, after all, I could not bring him to the ground.” And, indeed, whoever considers that a good rifle, levelled by a proper marksman, hardly ever misses its aim, will readily enough conclude, with this unlettered savage, that some invisible hand must have turned aside his bullets.

The Rev. Mr. Davies, in a sermon occasioned by Gen. Braddock’s defeat, has these remarkable words—“I beg leave to point the attention of the public to that heroic youth, Colonel George Washington, whom I cannot but hope providence has preserved for some great service to this country.”

Governor Shirley proceeded to Oswego, on Lake Ontario. His army was poorly supplied with provisions, and the rainy season approaching, he abandoned the expedition, and returned to Albany. The army under Gen. Johnson arrived at the south end of Lake George, the latter part of August, when he received information that two thousand of the enemy, commanded by Baron Dies-

kau, were marching against Fort Edward. Accordingly Colonel Williams was detached to intercept him.

Colonel Williams' party, which left the camp between eight and nine o'clock in the morning of Sept. 8th, 1755, very unexpectedly fell in with the army of Baron Dieskau; the two armies met in the road, front to front; the Indians of Dieskau's army were in ambuscade, upon both declivities of the mountains, and thus it was a complete surprise, for Col. Williams had unhappily neglected to place any scouts upon his wings. A bloody battle ensued, and a deadly fire was poured in upon both flanks.

Col. Williams, endeavouring to lead his men against the unseen enemy, was instantly shot through the head, and he and hundreds of his party, including old Hendrick, the chief of the Mohawks, and forty Indians, were slain. The remainder of the party, under the command of Col. Whiting, retreated into the camp. They came running in, in the utmost confusion and consternation, and perhaps owed their safety, in a great measure, to another party, which, when the firing was heard, and perceived to be growing louder and nearer, was sent out to succour them.

Nor did this battle terminate the fighting of this bloody day. The remains of Dieskau's army retreated about four miles, to the ground where Colonel Williams had been defeated in the morning—the rear of the army were there sitting upon the ground, had opened their knapsacks, and were refreshing themselves, when Captain M'Ginnies, who with two hundred men, had been despatched from Fort Edward to succour the main body, came up with this portion of the French army, thus sitting in security, and attacked and totally defeated them, although he was himself mortally wounded. Thus were three battles fought in one day, and almost upon the same ground.

The neighbouring mountain, in which the French so suddenly made their appearance, is to this day, called French mountain; and this name, with the tradition of the fact, will be sent down to the latest posterity. I was shown a rock by the road, at which a considerable slaughter took place. It was on the east side of the road, near

where Colonel Williams fell, and I am informed, is to this day, called Williams' Rock.

Just by the present road, and in the midst of these battle grounds, is a circular pond, shaped exactly like a bowl; it may be two hundred feet in diameter, and was, when I saw it, full of water, and covered with the pond lily. Alas! this pond, now so peaceful, was the common sepulchre of the brave; the dead bodies of most of those who were slain on this eventful day, were thrown, in undistinguished confusion, into this pond; from that time to the present, it has been called the Bloody Pond; and there is not a child in this region but will point you to the French Mountain and the Bloody Pond. I stood with dread upon its brink, and threw a stone into the unconscious waters. After these events, a regular fort was constructed at the head of the lake, and called fort William Henry.

Early in the spring, 1756, the enemy, invited by the success of the preceding year, made another irruption into the inhabited country, and did great mischief. The number of troops on the regular establishment, was totally insufficient for the protection of the frontier. The Indians, divided into small parties, concealed themselves with so much dexterity, as seldom to be perceived until the blow was struck. These murders were frequently committed in the very neighbourhood of the forts, and the detachments which were employed in scouring the country were generally eluded, or attacked to advantage. In one of these skirmishes in the neighbourhood of a stockade, the Americans was totally routed, and Captain Mercer killed.

The smaller forts were frequently assaulted and attacked. The people either abandoned the country, or attempted to secure themselves in small stockades, where they were in great distress for provisions, arms, and ammunition. Lord Loudon arrived in America, in July, 1756, as commander-in-chief. He was clothed with the highest civil authority, having been appointed governor of the colony. A complimentary address from the regiment, stating their pleasure at his arrival and appointment, and the readiness with which they would execute his commands, was presented to him; also a statement of

the distress of the colony, and a particular description of the situation of the military points.

An army was raised, of about twelve thousand men, which was better prepared for the field than any army that had been assembled in America. But the change of commanders delayed the operations of the English army. The French were active, and on the 12th of July, General Abercrombie received intelligence that they meditated an attack upon Oswego, a post of the utmost importance. Gen. Webb was ordered to prepare to march with a regiment to support the defence of that place, but was detained until the 12th of August. Before he had proceeded far, he learned it was too late.

By the loss of Oswego, all the western country was laid open to their ravages. There was reason to fear that the frontier posts would be swept away, one after another, and that all the preparations which had been made for an early attack on the enemy, would be lost with them. Besides, the enemy would have another year to fortify and strengthen their posts, and to render the reduction of them much more hazardous and difficult.

The colonies were obliged to submit, and Lord Loudon sailed from New-York for Halifax, with six thousand land forces, and there made a junction with Holbourn and Hopson. Here was now an army of twelve thousand men, exclusive of officers, aided by a powerful fleet; but they were so dilatory in their measures, that before they were ready to sail, the Brest fleet, with seventeen sail of the line, besides frigates and transports, arrived at Louisbourg. The garrison was so reinforced as to amount to nine thousand men. On the reception of this intelligence, it was judged inexpedient to proceed, and the expedition was given up.

Had the Earl of Loudon been a man of enterprise—had he wished to distinguish himself in his majesty's service, or to have rendered himself popular in the colonies, he might have conducted this powerful army to Ticonderoga, and carried all before him in that quarter. At least, he might have sent on large detachments for the defence of the frontiers. With his Prussian majesty, an Amherst, or a Wolfe these would have been but natural and com-

mon achievements. But he returned leisurely to New-York, and effected nothing.

The British generals in America did more, in two years, by the pusillanimity, weakness, and inconsistency of their councils, to injure the colonies, than the French could have done with all their force. The provincials would, probably, have advanced to Crown Point the last year, and made themselves masters of the country south of Lake Champlain. They would undoubtedly have kept their own posts, and prevented the evils which followed. The British generals and officers not only lost Oswego, but they destroyed the fortifications at the great carrying place, and filled Wood Creek with logs and trees. They cut off all communication between the colonies and the Five Nations, the only body of Indians which preserved the appearance of friendship to them. They abandoned their whole country to the mercy of the enemy. Nothing could be done to prevent their collecting the Indians, from all quarters, to act against the colonies.

Monsieur Montcalm did not neglect to improve the advantages he had gained, and which the conduct of the British generals afforded him. Finding that the troops were drawn off to Halifax, he at once determined on the siege of Fort William Henry, and the destruction of the vessels, boats, and batteaux, at the south landing of Lake George. Bodies of Indians, with his whole force, were collected for this purpose.

Colonel Monroe, who commanded at Fort William Henry, having intelligence that an advanced party of the enemy lay at Ticonderoga, detached Colonel Parker, with four hundred men, to surprise them. Having landed at night, not far distant from the enemy, he sent three boats to reconnoitre, directing them where to meet him in a general rendezvous. The enemy, waylaying and intercepting the boats, obtained a perfect knowledge of the colonel's designs, and concerted measures to decoy him into their hands. They laid an ambush behind the point where they knew he designed to land; and having been reinforced to nearly double his numbers, they sent three boats to the place appointed for the general rendezvous. The colonel, mistaking them for his own boats, eagerly

put to shore, and was instantly surrounded by the enemy. They attacked him on all sides with such incessant violence, that seventy privates and two officers only made their escape.

Elated with this success, Monsieur Montcalm hastened to the siege of Fort William Henry. Having drawn together all his forces from Crown Point, Ticonderoga, and the adjacent posts, with a greater number of Indians than the French had ever employed on any other occasion, he passed the lake, and regularly invested the fort. The whole army consisted of nearly eight thousand men. The garrison consisted of about three thousand, and the fortifications were said to be good. At Fort Edward, scarcely fourteen miles distant, lay General Webb, with four thousand troops. The regular troops at the two posts, were probably more than equal to the regular force of the enemy.

A considerable proportion of their army consisted of Canadians and Indians. Yet, in about six days, was this important post delivered up into the hands of the enemy. All the vessels, boats, and batteaux, which, at so much expense and labour, had been for two years preparing, fell into the power of the enemy. Though General Webb had timely notice of the approach of the enemy, yet he never sent to alarm the country, and bring on the militia. He never reinforced the garrison, nor made a single motion for its relief. So far was he from this, that he sent a letter to Colonel Monroe, who commanded the fort, advising him to give it up to the enemy.

Montcalm intercepted the letter, and sent it into the fort to the colonel. He had acted the part of a soldier, and made a brave defence; but, having burst a number of his cannon, expended a considerable part of his ammunition, and, perceiving that he was to have no relief from General Webb, he capitulated on terms honourable for himself and the garrison. It was, to march out with arms, baggage, and one piece of cannon, in honour to Colonel Monroe, for the brave defence he had made. The troops were not to serve against the most Christian king under eighteen months, unless exchanged for an equal number of French prisoners.

The French and Indians paid no regard to the articles of capitulation, but, falling on the English, stripped them of their baggage and few remaining effects, and the Indians in the English service were dragged from the ranks, tomahawked and scalped. Men and women had their throats cut, their bodies ripped open, and their bowels, with insult, thrown in their faces. Infants and children were barbarously taken by the heels, and their brains dashed out against stones and trees. The Indians pursued the English nearly half the way to Fort Edward, where the greatest number of them arrived in a most forlorn condition. It seems astonishing, that between two and three thousand troops, with arms in their hands, should, contrary to the most express stipulations, suffer these intolerable insults.

When it was too late, General Webb alarmed the country, and put the colonies to great expense in sending on large detachments of the militia for the defence of the northern frontier. The sudden capture of the fort, the massacre made by the enemy's Indians, and suspicions of General Webb's treachery, and an apprehension that General Montcalm would force his way to Albany, put the country into a state of great alarm and consternation. People were never more alarmed during the war. At the same time, there was never a more general and manly exertion.

Connecticut detached, and sent on, in a few days, about five thousand men. She had raised and sent into the field, fourteen hundred before, which was more than her proportion. Large reinforcements were marched on to Albany, and Fort Edward, from New-York, and the other colonies. General Webb, notwithstanding the great numbers of men with which he was reinforced, did not make any effectual provision for the defence of the frontier settlements. No sooner was one expedition finished by the enemy, than another was undertaken. Soon after the reduction of Fort William Henry, the enemy, with fire and sword, laid waste the fine settlements at the German Flats, and on the Mohawk River.

On the American station there were nearly twenty thousand regular troops, and a large number of provincials in

service ; and yet one fortress and settlement after another were swept away, and every where the enemy rioted and triumphed with impunity. The army spent the remainder of the campaign in inactivity. The provincials, as the season for winter quarters approached, returned to their respective colonies. The regular troops were stationed at Albany and Fort Edward. Thus ended the inglorious campaign of 1757.

By this time, under the repeated losses they had sustained, the colonies had very much lost their confidence in the British commanders in America. They, for two years, had witnessed their dilatory measures, their inconsistency, want of foresight, and a spirit of enterprise, and had such bitter experience of the consequences, that they considered them as utterly disqualified for the important command which they held. To their incapacity and pusillanimity, wholly did they impute the loss of Oswego, Fort William Henry, and their other losses on the frontiers.

Notwithstanding all the reinforcements which France had sent to Canada, they, every campaign, had a force much superior to the enemy. Had they been men of military genius, skill, and enterprise, instead of the losses they sustained, they might have led on their troops to conquest and glory. Had the colonies been left to themselves, they would probably have done better.

The first year of the war, when left to themselves, their achievements were honourable and useful to the nation ; but now they had sustained two years of great expense, which had been worse than lost. Indeed, such were the ministry, and the men whom they employed, that misfortune and disaster attended them in almost every quarter of the globe.* A British historian observes, with respect to this third campaign in America, "That it ended to the eternal disgrace of those who then commanded the armies, and directed the counsels of Great Britain."

By this time, the disputes relative to the Ohio, Crown

* There was one exception : Admiral Watson and Colonel Clive acted with great magnanimity and success upon the Ganges, in the East Indies.

Point, and territory in America, had involved a great part of Europe in the flames of war. It had kindled in both the Indies, and extended its destructive influence beyond the Ganges. The disappointments and losses of the British nation for a succession of years, and its present exigencies, absolutely demanded a change of men and measures. Men of capacity and enterprise were necessary to retrieve its honour, and prevent its ruin.

By a most happy turn in Providence, those incomparable men, Mr. Pitt, Mr. Leg, and their friends, had been chosen and established in the ministry, and had time to concert their measures, and choose the men to carry them into execution. Now, therefore, every thing relative to the nation, in Europe and America, took a new and surprising turn. Now men were brought forward, upon whose fidelity, skill, and spirit of enterprise, confidence might be placed.

Notwithstanding the disappointments and losses of the past years, they determined on the reduction of Louisbourg, with a view of cutting off the communication between France and Canada, of destroying the French fishery, and of securing the trade and fisheries of Great Britain, and her colonies in America. At the same time, to gratify the colonies, and to draw forth their whole strength into exertion, they also determined on expeditions against Crown Point and Fort Du Quesne.

Intimations of his majesty's design, and of his expectations from the colonies, were, at an early period, given to them by letters from the Right Honourable Mr. Pitt. These were written in a style which animated their courage, and drew forth their most spirited exertions. The people of Connecticut, in particular, exerted themselves in an extraordinary manner.

A special assembly was convened, on the 8th of March, at New-Haven, when the Right Honourable Mr. Pitt's letter was communicated to the legislature, importing, that his majesty had nothing more at heart than to repair the losses and disappointments of the last inactive and unhappy campaign, and by the most vigorous and extensive efforts, to avert, by the blessings of God upon his arms, the dangers impending over North America--and not

doubting but his faithful and brave subjects here would cheerfully co-operate with and second, to the utmost, the large expense and extraordinary succours supplied by his kingdom, for their preservation and defence; and that his majesty, judging that his colony, together with Massachusetts Bay, New-Hampshire, Rhode-Island, New-York, and New-Jersey, were able to furnish twenty thousand men, to join a body of the king's forces for invading Canada, and carrying the war into the heart of the enemy's possessions; and that it was his majesty's pleasure, that, with all possible despatch, there be raised as large a body of men as the number of inhabitants would allow, to begin the operations of the campaign, as soon as practicable. And that no encouragement might be wanting to so great and salutary an attempt, that strong recommendations would be made to parliament, to grant compensation for the expenses of said provinces, according as their active vigour and strenuous efforts should appear justly to merit.

The legislature resolved, That, notwithstanding this colony, when acting with the several provinces aforesaid, in the three several expeditions undertaken the preceding years, against Crown Point, hath raised a much greater number of men than its just proportion, in comparison with what they then raised, by means of which the number of men is greatly diminished, and its strength much exhausted, yet that nothing be wanting on the part of this colony, to promote the great and good design proposed by his majesty, and relying on his royal encouragement, five thousand good and effective men, including officers, shall be raised within this colony, as soon as may be, for the service aforesaid. It was resolved at the same time, that the assembly is sensible, that it is really more than the number of men this colony can allow, without great difficulty; and much exceeds this colony's proportion, even of twenty thousand men, when compared with the other provinces.

It was resolved, that the said five thousand men should be formed into four regiments, consisting of twelve companies in each regiment; that there should be one colonel, one lieutenant-colonel, one major, and one chaplain

to a regiment. The honourable Phinehas Lyman, Esq. who had a general's command in 1755, Nathan Whiting, Esq. Eliphalet Dyar, Esq. and John Read, Esq. were appointed colonels, to command the respective regiments.* The Rev. Messrs. George Beckwith, Joseph Fish, Benjamin Pomeroy, and Jonathan Ingersoll, were appointed chaplains.

To encourage the speedy enlistment of men for the service, the bounty was increased much beyond what it had been in former years. All proper measures were adopted to raise the troops with expedition, and to have them seasonably in the field.

To provide for the expenses of such a number of troops, the assembly enacted that thirty thousand pounds, lawful money, in bills of credit, at five per cent. interest, should be immediately printed : and that for a fund for the sinking of said bills, a tax of eight pence on the pound should be levied on the grand list of the colony, to be brought in Anno Domini 1760. It was provided, however, that such moneys as should arrive from Great Britain, for the reimbursement of the expenses of the war, should be applied, by the treasurer, for the purpose of sinking the said bills, and that if a sufficient sum should arrive before the time fixed for the payment of said tax, to sink the whole, that then said tax should not be levied, and that the act respecting it should be null and void.

That the treasurer might be able to pay the troops on their return from the public service, the assembly laid a tax of nine pence on the pound on the whole rateable estate of the colony, according to the list brought into the assembly in October last, and ordered that it should be collected by the last of December then following. And as it was uncertain whether money would arrive, sufficient to reimburse the expenses of the colony, in season, a committee was appointed to borrow the sum of twenty-five thousand pounds, to be paid before the 20th of May

* Each colonel was allowed forty pounds for his table, and the decent support of his chaplain. Their wages, as colonels, and captains for one company, was fifteen pounds per month. The bounty for each man who would equip himself for the field, was four pounds. The wages were the same as in the preceding year.

1761. For an ample fund to repay the sum to be borrowed, a tax of five pence on the pound was levied on the list which should be brought into the assembly in 1759, to be paid into the treasury by the last of December, 1760.

It was enacted also, that any of the notes given for the money borrowed, might be received in payment of said tax. But, as considerable sums of money were expected from England, for provisions, furnished for the troops under Lord Loudon, in 1756, it was enacted that said money, as fast as it should arrive, should be applied to discharge the notes given for the money borrowed; and that, if a sufficient sum should seasonably arrive to discharge all the notes, that then said tax should not be collected.

That nothing might be left undone, which could be attempted for his majesty's service, the commissioners appointed in October, to meet those from the other colonies, were now authorized to meet them at Hartford on the 19th of April, or as near that time as might be, to consult on measures for the general safety, and to excite the several colonies to the most vigorous and united exertions to carry his majesty's designs into execution.* As it appeared by Mr. Pitt's letter, that Major General Abercrombie was chief commander of the troops for the northern expedition, the governor was desired to give him the earliest information of the measures adopted by the colonies, and their vigorous preparations for an early and successful campaign.

While the colonies were employing the most vigorous exertions for an early campaign, such effectual measures had been pursued in England, that, in February, the armament designed for the reduction of Louisburg, was in readiness, and sailed for America. Admiral Boscawen commanded the naval, and General Amherst the land operations. Under General Amherst, was Brigadier General Wolfe. These were men of singular characters. General Amherst had the coolness and abilities of the Roman Fabius, while General Wolfe possessed the magnanimity and fire of the Scipios. From such men, great achieve

* Records of the Colony for March 8th, 1753.

ments might reasonably be expected ; and their successes equalled the most sanguine expectations.

Admiral Boscawen, and General Amherst, with the armament under their command, arrived safely in America ; and, on the 28th of May, the whole fleet, consisting of one hundred and fifty-seven sail, with about fourteen thousand troops on board, took its departure from Halifax, and, on the second of June, appeared before Louisburg.

For six days the landing of the troops was impracticable. The surf was so great, that no boat could live near the shore. On every part of the coast where a landing was judged practicable, the enemy had made entrenchments ; and, in places most convenient for the purpose, they had erected batteries, and mounted cannon. During the whole time after the discovery of the fleet, until the landing of the troops, the enemy employed themselves in strengthening their lines. These they manned with numerous infantry. General Amherst, with a number of his officers, reconnoitered the shore.

On the eighth the weather became more favourable, though there was yet a great swell and surf. The General, determining not to lose a moment, seized the opportunity. Before the break of day, the troops were embarked in three divisions. The admiral and general made their dispositions with consummate judgment. To distract the enemy, and draw their attention to different parts, the dispositions were made in this manner :—The divisions on the right, and in the centre, were designed only for feints, while that on the left was appointed for the real attack. This was commanded by General Wolfe. Before the landing, five frigates, and some other ships of war, commenced a furious fire, not only on the centre, but on the right and left of the enemy, to rake them in their flanks. When these had fired about fifteen minutes, General Wolfe pressed to the shore. The enemy reserved his fire until the boats were nearly in shore, and then poured upon them the united blaze and thunder of their musketry and cannon. Many of the boats were upset, and others dashed in pieces. Some of the men were thrown, and others leaped into the water ; and while some were killed, and others drowned, the main body,

supported and animated by the noble example and conduct of their commander, pushed to the land, and with such order and resolution rushed on the enemy, as soon put them into confusion, and drove them from their entrenchments. When General Wolfe had made good his landing, the centre division having moved to the left, and the right following the centre, the landing was completed in excellent order.

For many days the weather was so bad, and the swell and surf so great, that scarcely any of the artillery or stores could be landed. It was with great difficulty that even the tents, provisions, and implements for the siege, were got on shore. The weather was so bad at the time of landing, and during the siege, that a hundred boats were lost in the service. The enemy had five ships of the line, and one or more frigates, in the harbour, and could bring their guns to bear upon the troops, in their approaches. The ground was exceedingly bad; in some places rough, in others boggy, wet, and miry. These obstacles, with a brave resistance from the enemy, caused the siege for some time to proceed slowly.

But no discouragements were judged insurmountable, by such generals as Amherst and Wolfe. By the twelfth of June, General Wolfe had secured the point called the light-house battery, and all the posts in that quarter. On the twenty-fifth, he had silenced the island battery; but the shipping in the harbour kept up the fire upon him until the twenty-first of July. One of the ships then took fire and blew up. This set two others on fire, which burnt to the water's edge. This was to the enemy an irreparable loss.

By this time, Gen. Amherst had made his approaches near to the city; so that he was in good forwardness to make lodgements on the covered way. The town, in many places, was consumed to the ground, and in others, was much damaged. The fire of the enemy greatly languished, yet no proposals of capitulation were made. One bold action more was necessary to bring them to terms. That was to destroy, or bring off, the ships remaining in the harbour.

For this purpose, the admiral sent in a detachment of

six hundred men, under the command of two enterprising young captains, Laforey and Balfour. Between the 25th and 26th of the month, under the darkness of the night, they made their way through a terrible fire of cannon and musketry, and sword in hand, took the two ships. One ran aground, and was burnt; the other they rowed out of the harbour, in triumph.

The next morning, the governor proposed terms of capitulation. The garrison, consisting of five thousand seven hundred and thirty-seven men, surrendered prisoners of war. One hundred and twenty-one cannon, eighteen mortars, and large quantities of stores and ammunition, were taken. The enemy lost five ships of the line and four frigates, besides other vessels. St. Johns, with Louisburg, was given up, and the English became masters of the whole coast, from the St. Lawrence to Nova-Scotia. This was the most effectual blow to France, which she had received since the commencement of the war. It was a deep wound to her navy, and especially to her colonies and interests in America. It very much cut off her communication with Canada, and greatly facilitated the reduction of that country.

As the reduction of Ticonderoga and Crown Point was a favourite object with the northern colonies, they made early and great exertions for carrying it into effectual execution. Besides the assistance which they gave to the reduction of Louisburg, they furnished about ten thousand troops for the northern expedition. These, in conjunction with between six and seven thousand regular troops, had, by the beginning of July, got into Lake George more than a thousand boats and batteaux, a fine train of artillery, provisions, and every thing necessary for an attack on the fortresses of the enemy.

On the fifth of July, the army, consisting of fifteen thousand three hundred and ninety effective men, embarked in nine hundred batteaux, and one hundred and thirty-two whale boats, for Ticonderoga. Besides, there were a number of rafts, on which cannon were mounted to cover the landing of the troops. Early next morning, they landed at the north end of Lake George, without opposition. The army formed in four columns, and began

their march for Ticonderoga. But as the woods were thick, and the guides unskilful, the troops were bewildered, and the columns falling in one upon another, were entirely broken.

In this confusion, Lord Howe, advancing at the head of the right centre column, fell in with the advanced guard of the enemy, consisting of a battalion of regulars and a few Indians, who had deserted their advanced camp, near the lake, and were precipitately fleeing from our troops; but had lost their way, and were bewildered in the same way as they were. The enemy discharged, and killed Lord Howe the first fire. The suddenness of the attack, the terribleness of the Indian yell, and the fall of Lord Howe, threw the regulars, who composed the centre columns, into a general panic and confusion; but the provincials, who flanked them, and were acquainted with their mode of fighting, stood their ground, and soon defeated them. The loss of the enemy, was about three hundred killed, and one hundred and forty-eight taken. The loss of the English was inconsiderable as to numbers, but in worth and consequences, it was great. The loss of that gallant officer, Lord Howe, was irreparable.

From the day of his arrival in America, he had conformed himself, and made his regiment to conform, to that kind of service which the country required. He was the first to endure hunger and fatigue, to encounter danger, and to sacrifice all personal considerations to the public service. While he was rigid in discipline, by his affability, condescending and easy manners, he conciliated affection, and commanded universal esteem. Indeed, he was considered very much as the idol and life of the army. The loss of such a man, at such a time, cannot be estimated. To this, the provincials attributed the defeat and unhappy consequences which followed.

As the troops for two nights had slept little, were greatly fatigued, and needed refreshment, the general ordered them to return to the landing place, where they arrived at eight in the morning.

Colonel Bradstreet was soon after detached with a strong corps, to take possession of the saw mill, about two miles from Ticonderoga, which the enemy had aban-

done. Towards the close of the day, the whole army marched to the mill. The general, having received information that the garrison at Ticonderoga consisted of about six thousand men, and that a reinforcement of three thousand more was daily expected, determined to lose no time in attacking their lines. He ordered his engineer to reconnoitre the ground and intrenchments of the enemy. It seems that he had not so approached and examined them as to obtain any proper idea of them. He made a favourable report of their weakness, and of the facility of forcing them without cannon. On this groundless report, a rash and fatal resolution was taken, to attack the lines without bringing up the artillery.

The army advanced to the charge with the greatest intrepidity, and for more than four hours, with incredible obstinacy, maintained the attack. But the works where the principal attack was made, were eight or nine feet high, and impregnable even by field pieces; and for nearly an hundred yards from the breast-work, trees were felled so thick, and so wrought together, with their limbs pointing outward, that it rendered the approach of the troops, in a great measure, impossible. In this dreadful situation, under the fire of about three thousand of the enemy, these gallant troops were kept, without the least prospect of success, until nearly two thousand were killed and wounded. They were then called off. To this rash and precipitate attack succeeded a retreat equally unadvised and precipitate. By the evening of the next day, the army had retreated to their former encampment at the south end of Lake George.

Nothing could have been more contrary to the opinions, or more mortifying to the feelings of the provincials, than this whole affair. They viewed the attack upon the lines without the artillery as the height of madness. Besides, it was made under every disadvantage to the assailants. The enemy's lines were of great extent, nearly three quarters of a mile. On the right of the common path towards south bay, and especially on the north, they were weak and of little consideration. In both these quarters they might have been approached under the cover of a thick wood.

The army was sufficiently numerous to have attacked the lines in their whole extent at once, or at least in a very great part of them, and to have drawn their attention to various parts of their lines. But, unhappily, the attack was made upon a small part of them where they were far the strongest and most inaccessible. As no attacks or feints were made in other parts, the enemy were left to pour their whole fire on a small spot, while the whole army could not approach it. Besides, the general never approached the field, where his presence was indispensably necessary, but remained at the mill, where he could see nothing of the action, nor know any thing only by information at a distance of two miles. By reason of this, the troops, for hours after they should have been called off, were pushed on to inevitable slaughter.

But especially did the provincials reprobate the retreat. They considered themselves as more than a match for the enemy, should their pretended reinforcements arrive. The army, after this bloody affair, consisted of fourteen thousand effective men. After all the pompous accounts of the numbers of the enemy, they amounted to little more than three thousand. When the general retreated, he had more than four effective men to one of theirs. He had a fine train of artillery, and there were strong grounds on which he might have encamped with the utmost safety. There were eminences which commanded all the works of the enemy, whence he might have enfiladed their front, and poured destruction on their whole lines and camp.

The provincial officers were, therefore, clearly of the opinion, that there was the fairest prospect of success, notwithstanding their misfortune, could the expedition only be prosecuted with energy and prudence. But the general took his own way, without advising with them, and appeared to retreat with the utmost perturbation.

The general never had been high in the estimation of the provincials after the loss of Oswego; but now he sunk into contempt. They generally called him Mrs. Nabbycrombie, importing that petticoats would much better become him than breeches. To repair, as far as might be, the disaster at Ticonderoga, the general detach

ed Colonel Bradstreet, with three thousand provincials, on an expedition against Fort Frontenac.

With these troops Bradstreet sailed down the Ontario, landed within a mile of the fort, opened his batteries, and, in two days, forced this important fortress to surrender.

While these events were taking place in the northern department, General Forbes, who had been appointed to command the expedition to the southward, was advancing with great activity and labour, to the conquest of Fort Du Quesne. About eight thousand men had been assigned to this service. In June, the general marched from Philadelphia for the Ohio.

An attack, however, was needless, the fort having been deserted by the garrison the evening before the arrival of the army. General Forbes took quiet possession of the place, and repaired the fort, and named it Fort Pitt, in honour to Secretary Pitt.

The incredible fatigues of this campaign so broke the constitution of this vigilant and brave commander, that he returned to Philadelphia in a very enfeebled state; where, after languishing a short time, he died, universally lamented.

When General Amherst arrived with his troops at the lakes, the season was so far advanced, and such a body of troops had been drawn off, for the expedition under Colonel Bradstreet, that he judged it unadvisable to make any further attempts against the enemy during that campaign.

Notwithstanding the defeat at Ticonderoga, the campaign closed with great honour and advantage, not only to the colonies, but to the nation in general. In this, the fourth year after the commencement of hostilities, the English had not only reduced Louisburg, St. Johns, and Frontenac; but had made themselves the undisturbed possessors of that fine tract of country, the contention for which had kindled the flames of war in so general and destructive a manner. Success had attended the British arms, not only in America, but in almost every quarter of the globe. The successes in America, besides many other important advantages, paved the way for that

series of successful events, which terminated in the entire reduction of Canada.

Another favourable occurrence of this year, which had its influence in that great event, was a general treaty and pacification with all the Indian nations, inhabiting between the Appalachian mountains and the lakes. This was completed at Easton, on the eighth of October.

1759. It was proposed to attack Canada, and it was determined, that three powerful armies should enter the country by different routes, and commence an attack at the same time. General Amherst, who commanded one division, in his route attacked Ticonderoga. The garrison soon surrendered, as the principal part of them had retired to Crown Point. General Amherst proceeded against this place, and took possession of it, but the enemy, before their arrival, fled to Isle aux Noix, in the northern part of Lake Champlain. The second party, commanded by General Prideaux, was destined against Niagara, but he was killed by the bursting of a cohorn. Sir William Johnson, on whom the command now rested, successfully put in execution the plans of his lamented predecessor ; and on the twenty-fourth of July, a general battle took place. The action was warm and bloody, and the carnage was great ; but the conflict was short, which placed Niagara in the hands of the English.

An expedition against Quebec was the most daring and important. That place was so well strengthened, that all expeditions against it had failed. It was commanded by Montcalm, who was posted below the town, with a strong force, and the town was covered by an army of 10,000 men. General Wolfe was determined to try his skill in this case. He soon took possession of Point Levi, on the southern bank of the St. Lawrence, and erected batteries. By means of these, he destroyed many houses, but made little impression on the fortifications of the town ; he resolved to quit his post.

General Wolfe made several attempts to reduce the place, but they all proved unsuccessful. He also attempted to destroy the shipping ; this attempt also proved abortive. Stung with chagrin at his own disappointment, General Wolfe determined to ascend a precipice of about

one hundred and seventy-five feet, by which he might gain the heights of Abraham.

On the 12th of September, one hour after midnight, General Wolfe, with his army, leaving the ships, embarked in boats, and silently dropped down with the current, intending to land a league above Cape Diamond, and thus to gain the heights of Abraham. But, owing to the rapidity of the current, they fell below their intended place, and disembarked at what is now called Wolfe's cove, a mile, or a mile and a half, above the city. The operation was a most critical one—they had to navigate in silence, down a rapid stream—to hit upon the right place for a landing, which, in the dark, might be easily mistaken—the shore was shelving, and the bank to be ascended was steep and lofty, and scarcely practicable, even without opposition. Doubtless, it was this combination of circumstances which lulled the vigilance of the wary and discerning Montcalm; he thought such an enterprise absolutely impracticable, and therefore had stationed only sentinels and picket guards along this precipitous shore.

Indeed, the attempt was in the greatest danger of being defeated by an occurrence, which is very interesting, as marking much more emphatically, than dry official accounts can do, the very great delicacy of the transaction.

One of the French sentinels, posted along the shore, challenged the English boats in the customary military language of the French; "*Qui vit!*" who goes there! to which a captain of Frazer's regiment, who had served in Holland, and was familiar with the French language and customs, promptly replied, "*la France.*" The next question was much more embarrassing, for the sentinel demanded, "*a quel regiment?*" "to what regiment." The captain, who happened to know the name of one of the regiments which was up the river with Bougainville, promptly rejoined, "*de la Reine,*" "the queen's." The soldier immediately replied, "*passé,*" for he concluded at once, that this was a French convoy of provisions which, as the English had learned from some deserters, was expected to pass down the river to Quebec.

The other sentinels were deceived in a similar manner but one, less credulous than the rest, running down to the

water's edge, called out, "Pourquoi est ce que vous ne parlez plus haut?" "why don't you speak louder?" The same captain, with perfect self-command, replied, "Tai. toi, nous serons entendues!" "hush, we shall be overheard and discovered." The sentry, satisfied with this caution, retired. The British boats were on the point of being fired into by the captain of one of their own transport ships, who, ignorant of what was going on, took them for French; but General Wolfe, perceiving the commotion on board, rowed along side in person, and prevented the firing, which would have alarmed the town, and frustrated the enterprise.

General Wolfe, although greatly reduced by a fever, to which a dysentery was superadded, was, nevertheless, the first man to leap ashore. The rugged precipices, full of projections of rocks, and of trees, and shrubs, growing every where among the cliffs, into which the bank was broken, presented a most forbidding appearance, and General Wolfe, familiarly speaking to an officer who stood by, said, "I don't believe there is any possibility of getting up, but you must do your endeavour."

There was only a narrow path, leading obliquely up the hill; this had been rendered by the enemy impassable, in consequence of being broken up by cross ditches, and there was, besides, an entrenchment at the top, defended by a captain's guard. This guard was easily dispersed, and the troops then pulled themselves up by taking hold of the boughs and stumps of the trees, and of the projections of the rocks.

This precipice (which may be, in different places, from one hundred and fifty to two hundred feet high) is still very rude and rugged, but probably much less so than in 1759; it can now be surmounted, without very great difficulty, by men who are unmolested.

Wolfe staked all upon a very hazardous adventure; had he been discovered prematurely, through a spy, a deserter, or an alarmed sentry, his army would have been inevitably lost; but, having gained the heights, he formed his troops, and met the enemy in good order.

When Montcalm first received information that the English occupied the heights of Abraham, he was greatly

surprised. He saw that a battle was inevitable, and prepared to fight. The French advanced briskly; the English reserved their fire until the enemy were near, and then gave it with decisive effect. Early in the engagement, Wolfe received a slight wound in his wrist, but, binding his handkerchief around it, he continued to encourage his men.

Soon after this, he received another in his groin. This he also concealed, and continued to urge on his troops, until a third ball pierced his breast, which obliged him to quit the command, which fell on Monckton. He was soon wounded, and the command devolved upon Townshend. At this moment, Montcalm, fighting at the head of his men, was mortally wounded, and General Jenne-zergus, his second in command, also fell. The loss of their commanders caused the French to give way. Wolfe, who was reclining his head on the arm of an officer, was aroused by the cry of "they fly—they fly!" the hero eagerly asked, "who fly?" being informed the French were routed, "then," said he, "I die in peace," and expired.

This death, says Professor Stillman, has furnished a grand and pathetic subject for the painter, the poet, the historian, and, undoubtedly, considered as a mere military glory, it is one of the most sublime that the annals of war afford. In five days after the battle the city surrendered, and received an English garrison.

In September, 1760, Montreal fell into the hands of the English, and, soon after, all the French posts in Canada fell into their power. Thus ended a war which had continued six years, which had cost many thousand lives, and much distress. In 1763, Nova Scotia, Canada, the Isle of Cape Breton, and all other islands in the gulf, and near the St. Lawrence, were ceded to the British crown.

REMARKS ON PART SECOND.

Manners and Customs.—The rapid increase of wealth began to introduce among the colonies the tastes and fashions of the European countries, but their continuance was short among the Americans.

Religion.—The Dutch reformed religion generally prevailed in New-York; during this period, Shakers and Friends arrived in America. During the French and Indian war, infidelity was introduced into the army by the English officers and soldiers who came into this country, and from the army it spread through society generally.—*Population, 2,500,000*

UNIVERSAL HISTORY

OF THE

UNITED STATES.

PART THIRD.

CHAPTER VI.

A Summary View of the Causes that led to the American Revolution.

ALTHOUGH the narrow and illiberal policy of the British government towards her North American colonies, from their first settlement, was calculated to alienate the affections of the colonies from the parent country; yet from their exposed situation, and habitual loyalty, this unworthy conduct, long persevered in, produced no sensible impression on the Americans; their loyalty and attachment to the interest of Britain were not in the smallest degree impaired, down to the period of the peace of Paris, in 1763. Never had they shown so much zeal, or made such great sacrifices in the cause of their country, as during the preceding war; having lost more than twenty-five thousand men, expended all the revenues they could raise, and involved themselves deeply in debt.

Almost the whole burdens of the war in America, had fallen on the colonies; and their exertions were altogether disproportionate to their means, and tended greatly to impoverish and distress them. After eight years' arduous struggles, attended with the greatest sacrifices, the successful termination of the war—the dominion of France in America being relinquished forever—occasioned universal joy throughout the colonies; they forgot their suf-

ferings and distresses, in the fair prospects which the peace afforded.

But these prospects were of short duration ; the peace of Paris formed a new era in the views and conduct of Great Britain towards her colonies in America. The possessions of France, in America, having been ceded to Britain, and having no longer any fear of her power in this hemisphere, a system of measures was pursued towards the colonies, originating in jealousy, and tending to despotism. As soon as the colonies had fought their way to a condition which afforded the prospect of rapidly increasing in population and wealth, attempts were made to restrict their commercial and political privileges, and gradually to reduce them to the most wretched state of colonial vassalage.

For a century and a half, the colonies had been left to themselves as to taxation ; their own local assemblies had provided the necessary revenues to defray the expenses of their governments ; and the parliament of Great Britain had neither directly nor indirectly ever attempted to derive a dollar of revenue from America ; although various acts had from time to time been passed, regulating the trade and commerce of the colonies, yet none of these were designed or regarded, either in Britain or America, as revenue laws.

But in an inauspicious moment, the British ministry conceived the idea of taxing the colonies, under the pretence of providing for their protection, but in reality to relieve the nation from the immense debt, the weight of which hung heavily upon it. This iniquitous scheme, originating with the cabinet, was easily introduced into parliament ; and in March, 1764, as a prelude to the memorable *Stamp Act*, the house of commons resolved :

“ That towards further defraying the necessary expenses of protecting the colonies, *it may be necessary to charge certain stamp duties upon them ;*” and this resolution was followed by what was commonly called the Sugar Act, passed on the 5th of April, and introduced by the following truly alarming preamble :—“ Whereas it is *just and necessary* that a revenue be raised in America, for defraying the expenses of defending, protecting, and secu-

ring the same; we, the commons, &c. towards raising the same, give and grant unto your majesty, after the 29th day of September, 1764, on clayed sugar, indigo, and coffee, of foreign produce, [and various other articles,] the sum of," &c. This was the first act adopted by parliament, for the avowed object of raising a revenue in the colonies.

The *justice* of this measure, which appeared so clear to the British parliament, was regarded in America as *oppression and tyranny*, and occasioned great excitement and alarm. The deceptive pretension, that the revenue was to be raised for the purpose of protecting the colonies, was only adding insult to injustice; as the colonies supposed that they were capable of protecting themselves, and they apprehended that the object was rather under the pretence of affording them protection, to maintain a military force in America, for the purpose of dragooning them into submission, and enforcing an unconstitutional system of taxation; thereby rendering them the instruments of forging their own chains.

This act was rendered more disgusting by a provision that the money raised by it must be paid in specie, and another, that those charged with having violated the revenue laws, might be prosecuted in the courts of admiralty; whereby they were deprived of the privilege of trial by a jury, and were liable to be condemned by a single officer of the crown, whose salary was to be paid from the very forfeitures decreed by himself. And this was not all, or even the worst; as the trial was conducted on such principles, that the accused, contrary to the well known maxims of the common law, and repugnant to every idea of justice, was obliged to prove himself innocent, or suffer the penalties of the law. These iniquitous proceedings destroyed all security of property, and left every one at the mercy of the minions of the British crown. Their pernicious influence was soon felt extensively in the colonies; they no longer regarded Great Britain as an affectionate mother, but viewed her in the light of a selfish, cruel, and imperious step-mother.

The designs of the ministry were penetrated, and occasioned great alarm, which spread wider and wider, until

it became universal. The press, that great engine of truth and liberty, was called into requisition; the subject was ably and elaborately discussed, and the more it was discussed, and the better it was understood, the more strong and determined the opposition became. All the colonies petitioned and remonstrated against these obnoxious measures, and most of them appointed agents to present their memorials to parliament, or the king.

But, notwithstanding the opposition and excitement in America, and the remonstrances of the colonies, Mr. Grenville, who was at the head of the treasury, prepared the stamp bill, and introduced it into parliament in February, 1765; and, although opposed with all the powers of eloquence, by Alderman Beckford, Mr. Jackson, Colonel Barre, Sir William Meredith, and others, it was adopted by a great majority, fifty only voting in opposition, out of about three hundred members who were present.

On the second reading of the bill, various petitions, not only from the colonies, but from the London merchants interested in the American trade, were presented; but the petitions were not even received, being refused, on the plea that no memorial could be received on a money bill. Having passed both houses of parliament, on the 22d of March, the stamp act received the royal assent. Dr. Franklin, then in England, as agent for Pennsylvania, wrote to Charles Thompson, afterwards secretary of congress—"The sun of liberty is set; you must light up the lamps of industry and economy." Mr. Thompson, in a spirited reply, observed, "That he thought *other* lights would be lighted up to resist these unconstitutional measures." It is unnecessary to add, that this prediction was soon fulfilled.

This unjust and impolitic act was the first great cause which led to the American revolution; indeed, it was substantially the first scene in the bloody drama of that revolution. It was passed in parliament, on the 7th of February, 1765, under the ministry of Lord Grenville, and was repealed on the 18th of March, 1766, from the influence of Mr. Pitt. This period of thirteen months was the most eventful and tumultuous of any which had hitherto occurred; the apprehensions of the people were

roused to the highest pitch, and the most determined spirit of opposition prevailed throughout the colonies.

The Americans had not believed that the act would be passed, and on receiving the intelligence, every one was struck with astonishment, and filled with consternation; they looked at each other with amazement, and, for a short interval, hesitated what course to pursue; but soon recovering from their consternation, they determined not to submit to such a flagrant outrage on their rights. In Boston, the ships in the harbour, in token of the deepest mourning, suspended their colours half mast high; the bells were wrung muffled; and the obnoxious act, with a death's head in front of it, with the motto—" *The folly of England, and the ruin of America,*" was carried in solemn procession about the streets.

The discontents soon spread throughout the colonies, and the opposition became general and determined; the spirit of the people gave a tone to the colonial assemblies, and bold and decided resolutions were adopted against the iniquitous scheme of parliamentary taxation. Virginia took the lead, and on the 28th of May, 1765, Patrick Henry introduced his celebrated resolutions into the house of burgesses, which declared that the inhabitants of that colony were entitled to, and had possessed and enjoyed, all the rights, liberties, and privileges, of the people of Great Britain; that the general assembly of the colony had always exercised, and alone possessed, the power to levy taxes and imposts on the inhabitants of the colony, and that they "were not bound to yield obedience to any law or ordinance whatsoever, designed to impose any taxation whatever upon them, other than the law and ordinances of the general assembly." So bold and unexpected were these resolutions, that whilst they were reading, one of the members cried out "treason! treason!"

These resolutions were communicated to all the colonies, and the spirit they breathed spread from one legislature to another, and their sentiments were reiterated in resolutions adopted by the legislatures, and the freemen in public meetings. Committees were appointed, by the

assemblies of the colonies, to correspond with each other, and to meet for consultation; the object of which was to secure harmony of feeling and concert of action. These measures had a very happy effect; in the mean time, the press teemed with constant publications, vindicating the rights of the colonies; and many of them were of a highly inflammatory character, calculated to raise the public mind to the highest pitch. The pulpit, also, particularly in New-England, laboured in the same cause, with great zeal and effect; the flame of liberty kindled from breast to breast, and spread from province to province, until the conflagration became general. The spirit of opposition ran so high, as to break out into acts of tumult and disorder.

In Boston, the effigy of Mr. Oliver, the stamp master, was burnt, and his house assailed, partly demolished, and his furniture destroyed; and soon after, the house of William Storer, deputy-register of the court of admiralty, was attacked, and the books and files of the court destroyed; and the house of Benjamin Hallowell, comptroller of the customs, shared the same fate. These outrages were followed by a more bold and daring attack upon the dwelling of Mr. Hutchinson, lieutenant-governor of the province; he was obliged to flee to save his life, and his house was entirely demolished, except the walls, and every thing in it destroyed or carried off. Similar outrages were committed in other places.

In Connecticut, Mr. Ingersoll, the stamp officer, was burnt in effigy in many towns; and whilst he was proceeding from New-Haven to Hartford, where the assembly was in session, he was pursued and overtaken by a large concourse of people, some from more than thirty miles, and compelled to resign his office, which was followed by three hearty cheers of liberty and property. This took place at Weathersfield, from whence the people, who were headed by militia officers, proceeded to Hartford, where Mr. Ingersoll was compelled to read his resignation in the hearing of the assembly, which was succeeded by loud acclamations of liberty and property. In New-York, the stamp officer was compelled to resign, and Lieutenant-Governor Colden was burnt in effigy,

with a stamp bill in his hand, suspended from his own coach, and the whole was consumed together.

In the southern colonies, the public feeling did not lead to the same excesses; but in all of them, means were found to compel the stamp officers to resign; and in all the colonies the assemblies adopted resolutions in opposition to the stamp act, although, in many of them, the royal governors prorogued and attempted to stop their proceedings. The members of the colonial assemblies were animated and encouraged by the people, who, in most of the towns, instructed them to oppose the stamp act. But the most important measure to unite the colonies, and give energy and effect to their opposition, was convening a continental congress, consisting of deputies appointed by each colony. This measure was first proposed by the assembly of Massachusetts. The meeting was appointed to be holden in New-York, in October, 1765.

All the colonies, except New-Hampshire, Virginia, North Carolina, and Georgia, sent deputies; the three last of these colonies were prevented by their governors, and the first excused itself on account of its peculiar situation. The congress, after mature deliberation, adopted a declaration of rights, and a statement of the grievances of the colonies, and asserted, in the strongest terms, their exemption from all taxes not imposed by their own representatives. It also prepared a petition to the house of commons.

As the first of November, the time when the stamp act was to go into operation, approached, public feeling became still stronger, and was excited to the utmost to prevent the execution of the law. In New-York, ten boxes of stamps, which had arrived there for Connecticut, were seized by the populace and burned; and in other ports, the masters of vessels, which brought out stamps, were compelled to return with their detestable cargoes, or deliver them up to the people to be destroyed. In Boston and many of the principal towns, the first of November was kept as a day of mourning and deep distress; all the shops were shut, the bells were tolled muffled, and the effigies of the authors and abettors of the act were car-

ried in procession through the streets, and then torn to pieces, and consumed by the flames.

The lawyers of the supreme court in New-Jersey, resolved that they would not purchase the stamps in their professional business, and that they would relinquish their practice as a sacrifice to the public good ; and the principal merchants in the colonies, and great numbers of other classes of the inhabitants, entered into solemn engagements not only to refuse to use the stamps, but also not to import any more goods from Great Britain until the stamp act should be repealed. Associations were formed, called the " Sons of Liberty," the object of which was, to assist and protect with force, if necessary, every one who might be in danger from his resistance or opposition to the stamp act. This bold association originated in New-York, and prevailed throughout New-England, and had not the act been repealed, must have led to civil war.

The restrictive measures produced distress and tumults in England ; large numbers of the manufacturers being thrown out of employment, and more than forty thousand, with black flags, appeared in the streets in London, and surrounded the royal palace and parliament house. Fortunately a change of ministry took place, in consequence of what was called the regency bill, and Lord Grenville was succeeded by the Marquis of Rockingham, as first lord of the treasury, and the Duke of Grafton and General Conway were appointed secretaries of state.

In January, the parliament met ; the affairs of America occupied the principal attention, and the first talents of the house were engaged in the discussion. Mr. Pitt, who had been confined to his bed by sickness, when the stamp act was passed, now came forward as the great champion of the rights of the Americans, and with his manly and all powerful eloquence, opposed the unjust, unconstitutional, and dangerous measure ; he even justified the Americans in their resistance of an act of tyranny and oppression. After a long and animated discussion, the act was repealed, accompanied, however, with a declaration, " that the king and parliament had, and of right ought to have, full power and authority to make laws and

statutes of sufficient force to bind the colonies, and his majesty's subjects in them, *in all cases whatever.*" An act of indemnity was also passed.

The repeal of the obnoxious act occasioned universal joy, both in Great Britain and America; the ships in the Thames displayed their colours, and the whole city of London was illuminated; and in the colonies, notwithstanding the declaratory act, asserting the principle of taxation, the joy and rejoicings were universal; the non-importation resolutions were rescinded; animosities, ill treatment, and every thing past, were forgotten, and commercial intercourse with Great Britain, was resumed with greater activity than ever before had been witnessed. The colonies hoped and believed, that harmony would now be restored, and did every thing in their power to promote this desirable object.

But the officers of the crown, the minions of power, and the expectants of place, kept up a correspondence with the officers of the British government at home, and attempted to promote their own selfish views by misrepresenting their countrymen. Governor Bernard, of Massachusetts, was the head of this party, which contributed so much to breed difficulties, and bring matters to a crisis. Notwithstanding that the declaratory act still hung over the heads of the colonies, like a portentous cloud, it was not generally expected that the British government would very soon make another so dangerous an experiment. But these reasonable expectations, however, soon proved to be fallacious, and all reliance on the justice or liberality of Britain, was found to be deceptive and dangerous.

Notwithstanding the distraction into which the colonies had been thrown, by the stamp act, within a few months after its repeal, and before the wounds it had occasioned had had time to heal, the chancellor of the exchequer, Charles Townshend, came forward with a new scheme of taxing America, and was so sanguine in his views, that he pledged his character for the success of the project. The new revenue scheme was, to take off the duties on teas which were paid in Great Britain, and to levy three pence

per pound on all that was purchased in America, and also a duty on paper, glass, and several other articles.

A board of customs was established, and commissioners appointed to set in Boston to collect the duties; and the custom officers were to be paid from the revenue thus raised; and the governor, judges of the superior court, and other officers in Massachusetts, who had hitherto been dependant for their salaries on the assembly, to render them independent of the people, and more devoted to Great Britain, were also to be paid from these revenues. And to carry the iniquitous system into effect (as unjust laws can only be enforced by unjust means) the powers of the court of admiralty were greatly extended, so as to deprive the people of trial by jury in prosecutions for violating the revenue laws. Writs of assistance, as they were called, issued by the governor, or any officer of the revenue, authorized searching the house of the most respectable inhabitant in the province, on suspicion of the concealment of contraband or smuggled goods.

When intelligence of these new parliamentary regulations reached America, they occasioned universal astonishment, and revived all the excitement and alarm which prevailed during the stamp act. In the minds of reflecting men, they were regarded as more dangerous than that obnoxious act, as an indirect and disguised system of taxation had a more certain and fatal tendency to undermine the liberties, and enslave the people, than direct taxes. The colonies, assailed by the same injuries, had recourse to their former measures of complaint and supplication; but their petitions were not even read, and their remonstrances treated with contempt, thus adding insult to injustice.

These accumulated injuries and indignities aroused the fears and spirit of the colonies; and a circular letter, addressed to the other colonies, by the assembly of Massachusetts, contributed to diffuse the flame, and lead to concert of action. This letter was dated the 11th of February, 1768, and the sentiments it contained were reiterated by most of the colonial assemblies. From the bold and determined conduct of the assembly of Massachusetts, it was prorogued by the governor. Another assembly was

convened in May following, to which the governor, in his first communication, insolently demanded of them, as required by the British secretary of state, to rescind the resolutions of the preceding assembly, which led to the circular letter, and intimated, that unless they complied immediately, they would be dissolved at once.

But the assembly acted with a firmness which became the defenders of liberty; and, instead of complying with this haughty mandate, petitioned the king for the removal of the royal governor, and charged upon him a long catalogue of crimes. The governor, exasperated at their conduct, immediately dissolved the mutinous assembly, and applied to the commander in chief of the king's troops, then in New-York, to have several additional regiments sent to Boston. Alarmed at these circumstances, the inhabitants of Boston besought the governor to convene another assembly; but he treated their request with contempt.

The crisis required something to be done without delay, and, accordingly, letters were written to every town in the colony, requesting the appointment of delegates to meet in convention at Boston, before the arrival of the troops. Delegates from ninety-six towns met on the 22d of September. The governor instantly sent them an angry message, commanding them to disperse, threatening, in case of refusal, that they would suffer the consequence of their temerity. The convention, however, was not frightened into submission, but gave their reasons for convening, continued their deliberations, and prepared a petition to the king.

On the first of October, the troops arrived, and landed; and, sword in hand, paraded through the streets of Boston, which were filled with vast crowds, who, with sullen silence, denoting the deepest resentment, witnessed this, the first act in the great and bloody drama about to be performed. No tumult or resistance, however, ensued, notwithstanding the troops were quartered in the houses of the inhabitants. The assembly met in May, 1769, and immediately adopted several spirited resolutions; that the placing an armed force where the legislature was convened, to overawe their deliberations, was a breach of

privilege, and that the quartering of troops on the inhabitants in time of *peace*, was illegal, and a violation of the rights and liberties of British subjects.

A standing army was now stationed in the capital of Massachusetts, for the avowed object of coercing the inhabitants into submission; their commerce fettered, their characters traduced, the assembly prevented from meeting, and the petitions of all classes to have the assembly convened, treated with contempt by an insolent governor, who threatened to augment the troops, and enforce, at all hazards, his arbitrary and tyrannical measures, it cannot be surprising that the fears and exasperations of the people exceeded what had ever been witnessed before. At this alarming conjuncture, something must be done, and there was no other alternative but submission or resistance, as petitions had been treated with such contempt, that to memorialize any branch of the British government would be equivalent to submission; and there were but two ways of resistance, either an appeal to the sword, or an entire suspension of all commercial intercourse with Great Britain, which, as was said by Mr. Pitt in his speech, furnished the means whereby Britain had carried on the war with France, and which, if continued, would afford the means of their own oppression.

As all the colonies were involved in one common danger, they readily entered into the most solemn engagements, that no British, or India goods, should be imported, except a few specified articles of necessary use. The effects of these arrangements were soon felt in England, and produced clamours, and even tumults, in some parts of the kingdom. But the partizans of the crown in America, endeavoured, by their correspondence, to induce the ministry to persevere in their oppressive measures, and represented in the strongest terms, that the interruption of commerce was only an effort of desperation, which could not last long. They advised the ministry to purchase large quantities of goods, designed for the American market, and also to allow the merchants engaged in the American trade, a premium equal to the profits of their stock in business. "If these measures are adopted," said Mr. Oliver, secretary in Massachusetts, in one of his

letters, "*the game will soon be up with my countrymen.*"

The assembly which convened at Boston in May, set several weeks without doing any business, as they refused to act as long as an armed force was quartered in the town, and surrounded the house where they were in session; they were finally adjourned to Cambridge. They sent several messages to the governor to have the troops removed, but, after evading the matter for some time, he declared that he had no authority over the king's troops; thus admitting that the military was above the civil power in the province. Governor Bernard sent a provoking message, stating the expenditures of quartering the troops on the town, and requesting that provision be made for the same, and also for their future support; the assembly were thus called on to maintain the instruments by which they were to be oppressed and enslaved.

But instead of complying with this request, they passed several spirited resolutions, censuring the conduct of the governor and General Gage, for their rash and oppressive measures, their wanton violations of the constitution, the introduction of a standing army in time of peace, and their encroachments on the liberties of the citizens and of the province. The governor had received an order to repair to England, and lay before the king the state of the colony, which he communicated to the assembly, with a request that his salary might be continued during his absence, as his office would remain.

But the assembly informed him in decided terms, that they could not comply with either of his requests. On receiving this answer, he immediately, after a short, angry, and threatening speech, prorogued the legislature. He soon after set sail for Europe, then little thinking that he should never return to a country, that by his violent temper and arbitrary conduct, he had brought to the brink of civil war. His reception at court convinced the Americans of the truth of what they feared, that the governor had been sent for as a mischievous emissary, rather than for an impartial inquiry into the real situation of the province, or an investigation of his own conduct.

Thomas Hutchinson, the lieutenant-governor was ap

pointed to succeed Governor Bernard. Hutchinson was a native of Boston, and had run a career of popularity. whilst, however, he was courting the people at home, he was not less assiduous in ingratiating himself into the favour of the British government, by misrepresenting his countrymen. He was artful and plausible, and possessed of popular talents; but was insidious, dark, intriguing and ambitious; and the extreme of avarice marked every feature of his character. His appointment was announced at the close of the year 1769.

He immediately assumed a more haughty tone, and aimed at more high handed measures than his predecessor, and commenced his administration by informing the assembly that he was *independent* of them and the people, as his majesty had made provision for his salary. Secure of the favour of his sovereign, he treated the people and the assembly with contempt, and answered their repeated solicitations to remove the troops from the capital, by withdrawing the garrison from a strong fortress in the harbour of Boston, who were in the pay of the province, and replacing them by two regiments of the king's troops.

The ebullitions of popular feeling were so high as to occasion great alarm with the leading patriots, that it would break out into acts of violence, which might injure the cause of the people. The miserable minions of power in America, endeavoured to promote this result, and openly avowed, "that the only method to restore tranquillity, was to *take off* the original incendiaries, whose writing had instilled the poison of sedition into the people." James Otis, the most active, bold, and influential patriot of the day, having published, under his proper signature, some severe strictures on the conduct of the officers of the crown, was assaulted in a public room, by a band of hired ruffians, with swords and bludgeons, and being covered with wounds, was left for dead. The assassins made their escape, and took refuge on board the king's ships in the harbour. Mr. Otis survived, but the lamp of his understanding, which had glowed with such effulgence, was overcast with clouds and darkness. Mr. John Adams says, that he "laid the foundation of the

Emigrants going West.—Page 468.

Riot in State Street, Boston.—Page 147.

American revolution, with an energy, and with those masterly talents, which no other man possessed ;” and he is justly considered as the first martyr to American liberty.

The insults which the inhabitants constantly experienced from the soldiers, increased their animosity towards them to such a degree, as to lead to violence and bloodshed. On the second of March, 1770, an affray took place between a party of soldiers of the 29th regiment, and some rope-makers, in front of Mr. Gray’s rope-walk. This was followed by a more alarming outrage on the 5th ; the indignant populace pressed upon and insulted the soldiers, while under arms, and assailed them with clubs, sticks, and snow-balls covering stones. Being dared to fire by the mob, six of the soldiers discharged their muskets, which killed three of the citizens, and wounded five others.

The effect of this was electric ; the town was instantly in commotion, and the mass of the people were so exasperated, that it required the utmost exertions to prevent their rallying and driving the British myrmidons out of town ; and nothing but an assurance that the troops should be withdrawn, prevented this resort to force. The captain of the party and eight men were brought to trial : two of the men were found guilty ; the captain and the other men were acquitted. A general meeting of the inhabitants was immediately assembled in Fanueil Hall, who unanimously resolved, that no armed force should be suffered longer to reside in the capital ; and a committee was appointed to wait on the governor, and request the immediate removal of the troops. The governor refused to act, under pretence of want of authority ; but Colonel Dalrymple, alarmed at the state of things, proposed to withdraw the 29th regiment, which was more culpable than any other ; but he was informed that not a soldier should be left in town ; he was reluctantly compelled to comply, and within four days not a *Red-coat* remained.

This tragical affair produced the deepest impressions on the minds of the people ; and the anniversary of the massacre of the 5th of March, 1770, was commemorated

for many years, and orations delivered, which unfolded the blessings of civil liberty, the horrors of slavery, the dangers of standing armies, and the rights of the colonies. These annual orations administered fuel to the fire of liberty, and kept it burning with an incessant flame, and in no small degree promoted the cause of the colonies, in a manner that served to give a deeper glow to the flame of liberty. In the spring of 1773, the schooner *Gaspee* was stationed at Providence, to prevent smuggling: and the conduct of the commander having exasperated the inhabitants, two hundred men entered on board the schooner at night, and compelled the captain and crew to go ashore, and then set fire to the vessel.

The government offered a reward of five hundred pounds, for the apprehension of any of the persons engaged in this outrage; but such was the spirit and unanimity of the people, that this pecuniary inducement produced no effect, and the authors of the outrage could not be discovered. About this period, the letters of Governor Hutchinson and Mr. Oliver, to their friends in England, urging the government to adopt more decisive and vigorous measures, to coerce the colonies into submission, were discovered and sent back to America, by Dr. Franklin, which, being published by the assembly of Massachusetts, greatly contributed to inflame the public mind, and exasperate the people against these officers of the crown, who were justly charged with having shamefully betrayed their trust, and the people, whose rights it was their duty vigilantly to guard.

Whilst the other duties were repealed, that on tea was retained, for the sole and avowed object of maintaining the power, which parliament had asserted, of collecting a revenue in America. The ministerial scheme was cunning and artful; but did not, in the least degree, deceive the vigilance of the Americans. The object was to *cheat* the colonies out of their rights, by collecting an indirect, imperceptible duty, little more than *nominal* in amount, which, however, if acquiesced in, would have been an admission of the *principle* or right of Britain to raise a revenue in America. It was an attempt to obtain, covertly and by *fraud*, what they had attempted, but failed to obtain, openly by *force*.

In the first place, measures were adopted, openly and explicitly, for taxing the colonies, the duties to be paid directly by the consumer; but being unable to enforce this act, it was repealed, accompanied with a declaration of the *right* of parliament to tax the Americans, in all cases whatsoever. This naked assertion of a right, when the application of it had been attempted and abandoned, did not give the Americans much concern; they would not have cared, if the British had kept that assertion of a *right* to do wrong on their statute-book, as long as the two countries existed, provided they had not attempted to exercise their assumed right.

But the advocates of American taxation seemed to be sensible, that the bare assertion of a right, after an unsuccessful attempt to enforce it, would amount to but little, and that conclusions, obviously following the abandonment of the first attempt to tax the Americans, would be left in their full force. Under the circumstances in which the two countries were placed, therefore, the right must be enforced, or it must be considered as virtually abandoned. But this had been once attempted without success; a more ingenious mode, therefore, must be devised, or one less likely to give alarm to the colonies. The stamp duties were a *direct* tax, as the duty constituted the entire value of the sum paid; but a trifling impost would not be perceived, as the duty would scarcely make any sensible difference in the price of the article. The bitter pill which it was intended to make the colonies swallow, was gilded with sugar.

The duty was more artfully disguised than a single impost. It was, in fact, no additional burden on the consumers of tea, it being only a different *mode* of collecting the duty which had before been paid; yet this alteration of the mode involved the right and power of parliament to establish a revenue system in America. According to the former regulations, the teas of the India Company were first brought to England, where a duty was paid before they were sent to the colonies. The scheme was merely to change the place and mode of collecting the duty; it was to be paid in America, instead of England; for which purpose custom regulations were established,

and officers appointed. A duty of three pence on a pound of tea, would not be felt by the people, and this, or, rather, a greater duty, had been paid before in England; so that, instead of the burdens of the people being increased, they were rather lightened by this new regulation. So artfully disguised was this scheme.

It is a maxim with many politicians, and too generally correct, that the people will not be alarmed or excited by any principle, however it may be fraught with danger; that they must *feel* and *suffer*, before their fears will arouse them into action. But this maxim did not hold true with the Americans; they saw the danger, and resolved to resist, at the hazard of their lives, a *principle*, calculated to undermine the foundation of their liberty; although its operation at the time was not *felt* in the slightest degree. The resistance of the Americans to the scheme of collecting a duty on tea in America, instead of England, was the resistance of the *principle* which that scheme involved, solely; as no additional burden was thereby imposed on the people.

It is believed that this is the only instance in history, of an entire people being roused to resistance, from measures which were not burdensome or oppressive in their immediate operations, and dangerous only from a principle on which they were founded. This consideration affords the highest evidence of the intelligence of the Americans, as well as of their extreme jealousy and vigilance, in guarding their rights. That the experienced politician should foresee the ultimate design and tendency of measures, not immediately oppressive, is natural enough; but that the common people, or rather the entire population of a country, should be aroused to resistance, on account of measures not burdensome or oppressive, but dangerous only from the principle on which they were founded, is unparalleled.

It is not, however, to be supposed, that the colonists would have been so alarmed and aroused to such a spirit of resistance, by the new regulations as to tea, had it not been for the previous measures of the parent country evincing, in the clearest manner, a settled design to exercise the power of taxation over them. They considered

the new regulations as to tea, as an artful and disguised revenue system, although it imposed no additional duty, and they were determined not to be *cheated* out of their liberties, as they had before resolved not to be frightened out of them.

Measures were immediately adopted to prevent the introduction of the tea into the country, so as to avoid the payment of the duty ; and such was the strength and unanimity of public opinion, that without the aid of law, or rather in opposition to law, they were enabled to render their measures efficient, solely by the force of public sentiment, although measures of all others the most difficult to enforce, as interfering both with the interests and the established habits of the people.

In most of the towns from New-Hampshire to Georgia, the people assembled, and resolved to discontinue the use of tea, which was now regarded as an herb (however agreeable as a beverage) *noxious* to the political constitution. In the large commercial towns, regulations were adopted to prevent the landing of tea ; committees were appointed to inspect merchant's books, propose tests, and make use of other means to defeat the designs of Britain. Where it could be done, the consignees of the teas were persuaded or compelled to resign, or to bind themselves not to act in that capacity. The cargo sent to South Carolina, was stored, the consignees being constrained to enter into an engagement not to offer any for sale ; and in many of the colonies, the ships were compelled to return without discharging their cargoes. So vigorously were these measures enforced, that during one year eighty-five pounds was the whole amount of duties received.

The teas consumed in the colonies, were principally smuggled into the country, by the Dutch and French, who were favoured by the inhabitants in evading the revenue laws. During the four or five years that the new system had been in existence, very trifling quantities of teas had been introduced into the colonies ; and instead of the restrictive measures being relaxed as was expected in England, they increased in vigour and efficacy, and the quantity of tea introduced had constantly diminished.

As had been the case with other matters of difference

between the two countries, the principal struggle, growing out of the regulations as to tea, occurred at Boston. The other provinces had avoided the alternative which was reserved for this, of either suffering the teas to be disposed of, or to destroy them by violent means. Knowing the spirit of the inhabitants of Boston, the India Company had been more cautious as to the cargoes shipped for that port, than those sent to the other provinces : and the zeal of Governor Hutchinson, and the other officers of the crown there, greatly surpassed that of the crown officers in the other colonies, and was calculated to frustrate the measures of the inhabitants. The tea ships destined to Boston were all consigned to the sons, cousins, and persons who were the merest tools of Governor Hutchinson. When called on to resign, the only answer they would give was, "that it was not in their power."

As the consignees could not be induced or frightened to resign, the next plan was, to compel the vessels to return without landing their detestable cargoes ; but the collector refused to give a clearance without the vessels were discharged of dutiable articles, and the governor refused to give a pass for the vessels, until they were properly qualified from the custom house ; and to guard against the vessels being taken possession of, and conducted out of the harbour, the governor ordered Admiral Montague, who commanded the naval force, to keep a vigilant look out, and to suffer no vessel, coasters excepted, to pass the fortress from the town, without a pass signed by himself. The rigorous adherence to these measures, afforded great satisfaction to the governor and his minions, and all the British party ; they flattered themselves that the "Sons of Liberty," after all their clamour, resolutions, and schemes to resist the tea system, were outmanaged, and that it would be impossible for them to prevent the landing and sale of the obnoxious cargoes.

Their measures had been planned so wisely, and their execution was intrusted to agents of such known fidelity to the crown, and who were under the immediate influence and control of the governor, they thought there was not a loop-hole, whereby the rebellious Americans could

escape paying the hateful tax. They did not even dream that an attempt would be made to destroy or throw overboard the offensive article, which covered a tribute to Britain; for if they had, the vessels would have been guarded. The governor, after all he had witnessed and experienced, judging rather from his feelings than his knowledge, was entirely ignorant of public sentiment, and of the spirit of the people: he had no idea that they had determined to resist the obnoxious measure, at every hazard, even that of life. Nothing short of this bold step could prevent the deep laid scheme against the liberties of the country from succeeding.

It had been rendered impossible that the vessels should return with their cargoes; and to suffer the tea to be landed, and trust to the spirit and unanimity of the inhabitants not to purchase it, would have been to yield the point; for a small portion of the citizens were in favour of the British, and would, of course, consume the article, and by fair means or foul, it would have been distributed among others. And it would have been equally impracticable to prevent the tea from being landed; the most unwearied watching, day and night, could not prevent this, as it might be conveyed ashore by small quantities in the night season, and at such places as to escape the utmost vigilance. Every other measure had been attempted without success; the consignees had been urged to decline the commission, and a numerous public meeting of the citizens had been held, who presented a remonstrance to the governor, and urged him to order back the ships without suffering any part of their cargoes to be landed. But his answer satisfied them that he was the adviser of the measure, and determined to carry it into execution. The parties were at issue on the great question, on which the liberties of the country hung suspended; whether Great Britain should exercise the power of taxing the Americans in any way or not.

This question depended on the landing of a few cargoes of tea, which had become contaminated with an unconstitutional tax. The colonists were determined that they would not pay the tax, and the British party were determined to carry into effect the tea regulation, and to

frustrate the plans of the Americans. Both parties had taken their measures, and the British party were confident of success; the contest was advancing to a crisis; alarm and dismay prevailed; the deepest anxiety was depicted in every countenance; had an invading army been in the neighbourhood threatening to sack the town, or had the pestilence which walks in darkness ravaged its pavilions, greater gloom could not overspread the town, or stronger indications been exhibited, of a pending event big with the fate of three millions of people.

During this deep and awful suspense, a report was started, which spread with the rapidity of lightning through the town, that Admiral Montague was about to seize the ships, and dispose of their cargoes, at public auction, within twenty-four hours; which was believed to be a cunning device of Hutchinson, as this would as effectually have secured the duties, as if the teas had been sold at the stores of the consignees. This rumour was like an electric shock; leaving their employments, the people rushed into the streets, and, with amazed and terrified countenances, every one seemed to say, what shall we do to prevent the consummation, in so bold and daring a manner, of this iniquitous scheme.

In a few moments, as from an instinctive impulse, a vast crowd repaired to one of the most spacious churches in Boston, and organized themselves into a public meeting. Previously to taking any other step, a message was sent to the governor and the consignees, who with difficulty could be found, as they were afraid to encounter even the looks of an indignant and injured people. No satisfactory answers were returned; but instead of complying with their wishes, whilst the assembled multitude were quietly, notwithstanding the excitement which prevailed, consulting on their critical situation, and the measures proper to be adopted, the sheriff entered with an order from the governor, styling them an illegal and seditious assembly, and ordering them immediately to disperse.

But he did not bring with him the *posse comitatus*, as the power of the county was already assembled, and it was that the sheriff was ordered to disperse; this man

date was treated with deserved contempt, and the sheriff hissed out of the house, mortified and chagrined, and a confused murmur followed, not only in the house, but among the vast multitude from without; but soon order was restored, and the meeting adjourned, without adopting any vote or resolution. The leaders probably supposed, that such a meeting was not the place to discuss and devise measures to meet the crisis.

The bold measure was now conceived, and immediately proposed for execution, which surprised and agitated the two countries, and hurried on that memorable revolution which made them "enemies in war, and in peace friends." The success of it, as well as the danger attending it, required secrecy and despatch. It has never been known with certainty, either who contrived or executed this bold expedient; but there is no reason to doubt, but that Mr. Samuel Adams, and many of the leaders in the political affairs of the day, were its contrivers, and it is known, that the hall of council was in the back room of Edes and Gill's printing office, at the corner of the alley leading from Court-street to Brattle-street church. It is a singular circumstance, that the daring and desperate measure, for the maintenance of the liberties of the country, should have been counselled and contrived in an editorial closet of a newspaper, which was one of the organs of the public voice, and a vigilant sentinel of the liberties of the people. Since this period, many political schemes have originated in the "back rooms" of printing offices, but in general of a very different character.

In a few hours after the adjournment of the public meeting, the bold measure, on the success of which the great question of taxation hung suspended, was contrived, matured, and ripened for execution; and the public were surprised with the sudden appearance in the streets, of a large number of *savages*, or persons disguised, clad, and every way counterfeiting the aborigines of the country: armed with a tomahawk in one hand, and a club over the shoulder; who, in a silent and solemn manner, not a voice being heard, marched in Indian file, through the streets, amidst a crowd of astonished spectators, who knew not what to think of so unexpected and strange au

exhibition ; and its novelty, and the surprise which it occasioned, may have prevented any steps being taken to oppose their design.

The *Indians*, whilst strongly attached to tobacco. in this instance, at least, appear to have had a mortal antipathy to *tea* ; and, as though attracted by its noxious qualities, they proceeded directly towards the wharves where the tea ships lay ; boarded them, demanded the keys, and without the least hesitation or delay, knocked open the chests, and emptied their contents, duties and all, into the ocean, comprising several thousand weight of the finest teas. The deed was done in the face of the world ; and, although surrounded by the king's ships, no opposition was made or attempted—all was silence and amazement.

Thus the teas, which were designed as a means of extorting tribute from the Americans, became an offering to the "spirits of the vasty deep," and a sacrifice to the liberties of the country. The "*Indians*," having effected their object, showed no marks of triumph ; no savage warwhoop was heard ; nor did they commit any other violence or disorder, but in the same silent, solemn, and orderly manner, marched back through the town, followed by a vast crowd. No movements on the part of the government, or disturbance by the people, followed this event ; and it was observed at the time, that the stillest night succeeded, which Boston had enjoyed for several months.

No persons assisted the savages in the destruction of the tea, except some boys or young men, who had assembled on the occasion, and voluntarily took a part in what was going on ; one of these youths collected the tea which fell into his own shoes, and those of several of his companions, put it in a phial, and sealed it up, which is now in his possession, containing the same obnoxious tea, which, in this instance, was considered as more dangerous to the political health and constitution of the people, even than strong drink. The number of savages, manufactured for the occasion, has been variously estimated from sixty to eighty ; although several persons have been mentioned as among the number, none of them have ever been known with certainty ; there are many and ob-

vious reasons, why secrecy then, and concealment since, were necessary. Not any of those who, it has been confidently asserted, were of the party, have admitted the fact, except some of the boys.

Nearly all of the disguised persons have left this scene of strife, and their secret has died with them; and what few remain, if any, will probably be as prudent as those who have gone before them, and like them, will suffer their knowledge to be buried with them, so that the greatest secret will shortly be beyond the reach of human research. The success of this bold and daring measure, astonished Governor Hutchinson and the British party, and seemed to convince him that the "Sons of Liberty" were not quite so contemptible as he had represented them in his letters to the ministry; and it even astonished the whigs in the other colonies, and contributed to fan the flames of liberty, and give them a deeper glow, and more intense heat.

When the intelligence of this event reached England, accompanied with all the exaggeration and colouring which Hutchinson could give to it, it produced the utmost excitement and indignation with the ministerial party, and even the opponents of the American revenue system, could not justify so rash and desperate a measure. Parliament at once determined to crush the devoted town, which was the seat and cause of this high-handed resistance to its supremacy. Its omnipotent power, and all the terrors of its wrath, were to be concentrated and directed against this rebellious town. A bill was immediately introduced to "discontinue the landing and discharging, landing and shipping, of goods, wares, and merchandise, at the town of Boston, or within the harbour."

This bill, called the "Boston Port Bill," passed on the 25th of March, 1774, and when it was known, threw the inhabitants into the utmost consternation. A general meeting was called, and spirited resolutions adopted, expressive, in strong terms, of their sense of the oppressive measure, and they requested all the colonies to unite in an engagement to discontinue all importations from Great Britain and most of the colonies resolved to make com-

mon cause with Massachusetts, in her opposition to the unconstitutional measures of parliament.

The first of June, when the port-bill was to go into operation, was appointed to be kept as a day of fasting and prayer. This act was soon followed by another, "for the better regulating government in the province of Massachusetts Bay;" the object of which was to alter the charter, so as to make the judges and sheriffs dependant on the king, and removeable at his pleasure. And this act was soon succeeded by another, which provided, that any persons indicted for murder, or other capital offence, committed in aiding the magistrates in enforcing the laws, might be sent by the governor, either to any other colony or to Great Britain, for his trial.

The Quebec bill followed in rapid succession, enlarging the bounds of that province, and conferring many privileges on the Roman Catholics; the design of which was to secure the attachment of that province, and prevent its joining with the colonies in their measures of resistance. These measures, instead of intimidating the colonies into submission, only confirmed their fears of the settled designs of Great Britain, to deprive them of their chartered rights, and reduce the colonies to the lowest state of political degradation and oppression. A sense of common danger led to an extensive correspondence, which resulted in the opinion, that it was expedient to convene a general congress, to consist of deputies from all the colonies. This congress met at Philadelphia, on the 5th of September, 1774; and comprised among its members, some of the most distinguished patriots, statesmen, and orators in this country, or perhaps in any other. Notwithstanding the ferment which prevailed in most of the colonies, their proceedings were characterized by coolness, unanimity, and firmness.

They published a long and solemn declaration of rights, as British subjects, and maintained in the strongest terms, their exemption from taxation by parliament; besides which, they prepared a petition to the king, which was refused to be answered; an address to the *people* of Great Britain—another to the people of America. These documents were drawn up with a masterly hand, and exhibited

great dignity and ability, and were, in every respect, worthy of the men who had confided to them the liberties of their country, and the destinies of three millions of their countrymen, threatened with slavery.

The proceedings of congress did not tend to allay public feeling, and as the royal agents in Massachusetts seemed determined to push matters to extremities, and reduce the people to unconditional submission, by arbitrary and forcible means, every thing now wore the appearance of civil war. A new council, and new judges, were appointed by the crown; and the latter attempted to enter upon the execution of their offices; but the juries refused to be sworn under them; the people in some counties assembled to prevent their proceedings, and in Berkshire succeeded in thus setting an example, which was afterwards followed by Shays' men, in violation of the laws of the state. About this time, the famous "Tree of Liberty," in Boston, which had been pruned and ornamented with so much pride and care, "fell a victim to British vengeance, or to some individual to whom its shade had become offensive."

Previously to this period, General Gage had succeeded Hutchinson as governor of Massachusetts; and, apprehending danger from a general muster of the militia, he caused the magazines and ammunition at Charlestown and Cambridge, to be removed to Boston, and fortified the neck of land which joins Boston to the main land, at Roxbury. These measures occasioned a universal panic; delegates from all the towns in the county of Suffolk met, and spirited resolutions, and a remonstrance to the governor, were adopted.

The general assembly had been summoned to meet at Salem; but, from the turbulence of the times, the governor issued his proclamation, countermanding their meeting; yet, in defiance of the governor's mandate, ninety members met, resolved themselves into a provincial congress, chose Mr. Hancock president, and adjourned to Concord, nineteen miles from Boston. They fearlessly proceeded to business; after addressing the governor, and reiterating their grievances, in the face of British law and British troops, they proceeded to adopt the first measures

which were taken, directly and avowedly, preparatory to an appeal to the sword, in defence of their rights and liberties. They regulated the militia, made provision for furnishing the people with arms, and for supplying the treasury; and such was the enthusiasm of the people, that their recommendations had the force of law. Governor Gage was filled with rage at these daring proceedings, and issued a proclamation, in which he insinuated that they amounted to rebellion.

Early in 1775, parliament passed the fishery bills, which prohibited the colonies from trading in fish with Great Britain, Ireland, and the West Indies, and from taking fish on the banks of Newfoundland. These acts were intended to operate on the town of Boston, which had become the devoted object of ministerial wrath. The various statutes which were passed, occasioned deep and general distress in Boston and its vicinity; but their brethren in the other colonies sympathized with them, and promptly supplied them with provisions of every description for the relief of the sufferers.

This policy of the British government was not only oppressive, but mean and contemptible. *Partial* legislation is always odious and tyrannical; yet it consisted with the justice and dignity of the British nation; and a series of acts were passed, and the power of the nation exerted, to crush the town of Boston, because it had shown a more determined spirit of resistance to their oppressive and unconstitutional measures than had appeared in other places. The ministry were not sensible that the colonies considered themselves all engaged in a common cause; they were in hopes to humble and crush the rebellious inhabitants of that devoted town, which they thought would be such a terrific example as would frighten all the colonies into submission. But their wicked designs recoiled on the heads of their authors; for these oppressive measures towards the Bostonians only served to exasperate the people throughout all the colonies, who regarded them as cruel and detestable.

In March, 1775, the public indignation was greatly excited by the following base, and most shameful transactions:—

Punishment of a man from Billerica, who purchased a gun from a British soldier in Boston, March, 1775.—Page 161.

BATTLE OF LEXINGTON. The first blood spilt in the American Revolution, on the 19th of April, 1775.—Page 162.

“ The people from the country, whose business called them into Boston, were suspected by the officers of purchasing guns from their soldiers. In order to furnish an opportunity to inflict punishment, and to raise occasion for a serious quarrel, Lieutenant Colonel Nesbit, of the forty-seventh regiment, ordered a soldier to offer a countryman an old rusty musket. A man from Billerica was caught by this bait, and purchased the gun for three dollars. The unfortunate man was immediately seized by Nesbit, and confined in the guard-house all night. Early next morning they stripped him entirely naked, covered him over with warm tar, and then with feathers, placed him on a cart, and conducted him through the streets as far as liberty tree, where the people began to collect in vast numbers, and the military, fearing for their safety, dismissed the man, and retreated to their barracks. The party consisted of about thirty grenadiers, with fixed bayonets, twenty drums and fifes playing the rogue’s march, headed by the redoubtable Nesbit with a drawn sword ! What an honourable deed for a British field officer, and grenadiers ! The select men of Billerica remonstrated with General Gage respecting this outrage, but obtained no satisfaction.”

The breach between Britain and the colonies had now become so wide, as, with the mass of the people, nearly to exclude all ideas of conciliation ; and both parties began to make preparations for an appeal to the sword. No alternative was left the Americans but slavery, or resistance by force ; measures were adopted for training the militia to the use of arms, to encourage the manufacture of gunpowder, and for collecting all kinds of military stores ; and committees of public safety were appointed in all the towns in the province. The British government sent out a reinforcement of troops to Boston, and in the mean time, Governor Gage attempted to counteract the designs and measures of the provincials, and particularly to seize and destroy their military stores, and thus deprive them of the means of resistance.

To destroy their military stores at Concord, General Gage despatched, in a secret manner, a regiment of grenadiers, who undertook to disperse, and fired upon a party

of militia at Lexington, several of whom were killed which was the *first blood* spilt in that memorable war and revolution, that separated Great Britain and America for ever, and gave to the latter, not only a rank among the nations of the earth, but what only can exalt a nation—*Liberty* and *free institutions*, which are the durable foundations of its glory and rising prosperity—its tranquillity and happiness, its increasing population and wealth, the rapidity of which is unexampled in the annals of the world.

Thus, dear reader, I have given you a summary view of the causes which led to the American revolution. I shall commence the revolution by giving you an account of the battle of Lexington.

On the 18th of April, 1775, Lieut. Colonel Smith and Major Pitcairn left Boston, with 800 chosen men from the British army, for the purpose of destroying the American stores at Concord. On their arrival at Lexington, they found about seventy militia under arms upon the green. Major Pitcairn, seeing the Americans on parade, rode up to them, and exclaimed, disperse, you rebels, throw down your arms, and disperse. His orders, not being instantly obeyed, he discharged his own pistol, and ordered his men to fire. His orders were obeyed, and three of the Americans were killed. The detachment proceeded to Concord.

The militia of that town had also assembled to oppose them, but their number was so small that they retired and waited for aid from the neighbouring towns. The British destroyed all the stores that were to be found, and then began their retreat towards Lexington. But the whole country was in arms, and pressed upon their rear. The Americans kept up a continual fire from behind hedges, stone walls, &c. Major Pitcairn, fearing his carcass would be picked from his horse, dismounted, and led his division on foot; but his horse and equipments were taken by the provincials. At sunset, the regulars, overcome with fatigue, secured their retreat over Charlestown neck, and found on Bunker's Hill a place of security and repose.

The loss of the British, in killed, wounded, and taken

prisoners, amounted to 273, while the American loss in killed, wounded, and missing, was only 88.

The battle of Lexington spread like a conflagration, and aroused the hardy sons of the country to a manful resistance. The agriculturalist left his plough in the furrow, and the mechanic dropped his tools in the shop, and the great mass of the people repaired to Boston with such arms as could be found. Within a few days a large army was collected, under the command of Generals Ward and Putnam. This alarmed General Gage for the safety of his garrison. When the tidings of these events reached the south, the population were aroused to the contest with the same animated zeal which had been displayed at the north, and the alarm spread far and wide through the country.

On the 28th of April, 1776, the provincial congress of Massachusetts issued the following general circular:

“We conjure you, by all that is dear, by all that is sacred, that you give all possible assistance in forming an army, in defence of the country. Our all is at stake. Death and destruction are the certain consequences of delay. Every moment is infinitely precious; an hour lost may deluge your country in blood, and entail perpetual slavery upon the few of your posterity that survive the carnage. We beg and entreat, as you will answer it to your country, to your consciences, and, above all, as you will answer it to your God, that you will hasten, by all possible means, the enlistment of men, to form an army, and send them forward to head quarters, at Cambridge, with that expedition, which the vast importance and instant urgency of the affairs demand.”

This, as might be expected, aroused the energies of the country, and inspired the people with the most heroic feelings. The call was promptly obeyed, and the sons of liberty enlisted themselves with the greatest alacrity for the defence of their rights.

The responsibilities which now rested on the fathers of the revolution were great, and their services important. They had to embody and discipline new and inexperienced troops, bring order out of confusion, and to supply both arms and ammunition, being without funds, and

almost without authority to resist them. Besides this, the army was to be supplied with provisions, in the face of a formidable, well disciplined, and well furnished enemy. But the zeal and ability of the officers were equal to the crisis. Of some it is even recorded, that for a succession of days and nights, they were constantly at the head of their respective guards, without a change of raiment.

At this critical epoch, General Ward directed Colonel Ethan Allen to raise four hundred Green Mountain Boys, on the New-Hampshire grants, since then composing the state now called Vermont. With this force he was to surprise the garrisons of the English on Lake Champlain. The colonel raised two hundred and thirty of the number, with which force he repaired to Castleton, where he met one hundred and seventy-two more, by concert with certain officers of the militia. In this plan, Dean, Wooster, and Parsons, with others in Connecticut, co-operated, and sentinels were posted on the different routes to Ticonderoga, to intercept intelligence of the intentions of the Americans.

About this time, Colonel Benedict Arnold, who had arrived to assist in the enterprise, consented to act in concert with Colonel Allen, and no unnecessary delay prevented them from moving forward to the object which they determined to accomplish.

Colonel Allen crossed the lake on the 10th of May, with a detachment of only eighty-three men, with which he attacked Fort Ticonderoga early in the morning. With this small number he rushed into the fort while the garrison was asleep. Captain Delaplace was ordered to surrender the garrison instantly, as he would save them from immediate destruction. The captain inquired by what authority, to whom Colonel Allen replied, "In the name of the Great Jehovah, and the continental Congress." The fort was immediately surrendered, and the soldiers paraded without arms. The prisoners consisted of four officers, forty-four privates, with several women and children, who were sent into Connecticut for security.

The fruits of this victory were—120 iron cannon, 50 swivels, more than three tons of balls, two ten inch mortars, and a quantity of shells, flints, gun carriages, powder

flour, pork, &c., with two brass cannon, and many other valuables.

With the remainder of the party, Colonel Seth Warner, a native of Connecticut, crossed the lake, and took the fortress of Crown Point by surprise, with more than one hundred pieces of cannon. Colonel Arnold, who had embarked on the lake in a small schooner, captured an English armed vessel, and returned to Ticonderoga with his prize. Thus was a free communication with Canada secured by the command of the lake.

While the tide of success thus waited on the American arms in the north, General Gage contemplated an attack upon the American troops at Roxbury, under the command of General Thomas. The number of troops at this place amounted, in all, to but seven hundred militia, and they were nearly destitute of both arms and ammunition. What was wanting in force, however, was supplied by stratagem. The Americans were marched round a hill in full view of the enemy, and displayed to such advantage through the day, that the British general was completely hoaxed, and the attack was not made. Reinforcements soon arrived, and the place was saved.

The success which attended the American arms in these frequent skirmishes with the foraging parties of the British, among the small islands which abound in Massachusetts Bay, gave them confidence and courage to face the English forces with confidence and success in more important undertakings.

On the 25th of the month, the three British generals, Howe, Clinton, and Burgoyne, arrived at Boston. They were able and experienced, and to them was committed the task of putting down all opposition, and of bringing the revolted colonists to a state of absolute and unconditional submission, during the first campaign.

Two days after this, the Provincials, under Putnam and Warren, defeated a strong force of the enemy on the islands, and destroyed the vessel, armed and stationed for their defence. The same success attended their arms on the 30th, and the British were greatly distressed by a removal of the cattle from the islands, and the communication with Boston was now closed.

On the part of the continentals, the sufferings were severe. The small pox had been communicated from Boston, and raged in the army to an alarming degree. Money was exceedingly scarce; and the whole force, including officers and soldiers, did not exceed eight thousand. Under all their discouragements, and in their undisciplined state, nothing could keep them together but the most ardent zeal for the cause of their common country.

A proclamation was issued by General Gage, on the 12th of June, in the king's name, offering a general amnesty, excluding only John Hancock and Samuel Adams. Those who should refuse these gracious offers, or correspond with, or aid and assist the refractory, were denounced as rebels, and threatened to be treated as such. Martial law was also declared in the province.

The proclamation was very properly considered as public declaration of war, and the precursor of hostile operations, and the enemy was watched with the utmost vigilance. Colonel Prescott, with a detachment of one thousand men, was ordered to fortify Bunker's Hill, in Charlestown but as the operation was in the night, he fortified a place which lay contiguous to it, called Breed's Hill, which was nearer to Boston. The boldness of this movement both perplexed and astonished General Gage, who saw that it jeopardized his own safety in Boston. He determined to dislodge them from this position without delay; and, on the 17th, about noon, he detached a train of artillery, ten companies of grenadiers, and four battalions of infantry, for this purpose.

On this occasion, Major General Howe, and Brigadier General Pigot, commanded. At Charlestown, a reinforcement was added to their numbers, and the force amounted to three thousand men. This force formed on the beach, and, marching in battle array, a terrible cannonade was commenced. The first shock of the battle was firmly sustained by Colonel Prescott, aided by Colonel Stark of New-Hampshire, and Captain Norton, of Connecticut. The detachment was soon joined by Generals Putnam, Warren, and Pomeroy, who imparted enthusiasm and energy to the conflict. Charlestown was wrapped in flames as the British advanced.

Battle of Bunker Hill, June 17, 1775, and Death of General Warren.—Page 166

Washington crossing the Delaware, December 8, 1776.—Page 184.

In imitation of the heroes on the plains of Abraham, the fire of the Americans was reserved until the English arrived to within seventy yards. A well directed fire of musketry was then opened, which spread destruction in the ranks of the assailants, and kept them in check. The discharge of the musketry was dreadful, and the enemy fled in disorder. The chagrin and mortification of the officers was extreme, and the men were rallied to another charge. They were again repulsed, cut to pieces, and put to the rout. At this crisis, General Clinton came up, and, the troops being once more rallied, renewed the charge, and the carnage became dreadful. The time was a critical one. The powder of the provincials was nearly expended, and the cartridge boxes of the dead were searched, that the fire might be continued, when their wings were outflanked by the enemy, and the trenches were exposed to a raking fire from the British artillery.

A terrible cannonade was now commenced from the British ships and batteries, and the exertions of the enemy were redoubled. The troops were pressed on by the swords and bayonets in the rear, and the points of British bayonets were met by clubbed muskets, until numbers prevailed, and the Americans were compelled to retire. The retreat was conducted in good order, and the camp at Cambridge was regained, under a well directed fire from the ships and batteries, which raked them severely as they crossed over the neck at Charlestown.

Of this battle, it may be said, that in all the records of British valour, not one action occurred, in which they were met by a more dauntless courage, or a more obstinate resistance, or in which they obtained a harder victory.

In this battle, the Americans lost 139 killed. 278 wounded, and 36 missing, in all 453. Among the killed, were Gen. Warren, Col. Gardner, Lieut. Col. Parker, and Majors Moore and M'Claney, whose loss to the nation was severely felt, and shed a gloom over the country.

The British loss, as reported by General Gage, was 226 killed, nineteen of whom were commissioned officers, and seventy officers wounded. Total loss of the British. 1054.

The result of the American loss in this battle, is said to equal that of Wolfe in the capture of Quebec, but in the loss of officers, it stands as eighteen to thirteen in killed, and as seventy to sixty-six in wounded. From this some estimate can be made of the comparative resistance in the two conflicts.

On the 10th of May, the day on which Col. Allen demanded the surrender of Ticonderoga in the name of the American Congress, that illustrious body assembled in Philadelphia, and commenced its session. The Hon. Peyton Randolph was re-appointed President, and Charles Thompson, Secretary.

In June, by a special resolve, the Congress interdicted all intercourse with the enemy, and assumed the style of the Twelve United Colonies, under sanction of which, a day of fasting was appointed for the 30th of July following. On the 15th, General Washington, then a member from Virginia, was appointed to the responsible station of Commander in Chief of the American forces. He accepted the trust with great diffidence. In reply to the President, after accepting the appointment, he added—"But lest some unlucky event should happen unfavourable to my reputation, I beg it may be remembered, by every gentleman in the room, that I this day declare with the utmost sincerity, I do not think myself equal to the command I am honoured with.

"As to pay, sir, I beg leave to assure the Congress, that as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire."

On presenting this special commission to Gen. Washington, a resolution was unanimously adopted, that "they would maintain and assist him, and adhere to him, with their lives and fortunes, in the cause of American liberty." Immediately after this, was the appointment of four Major Generals, Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam; and eight Brigadier Generals, Seth Pomeroy, Richard Montgomery, David Wooster,

Lafayette

The Friend of Washington.

William Heath, Joseph Spencer, John Sullivan, and Nathaniel Greene.

On the 2d of July, fifteen days from the date of his commission, Washington arrived at Head Quarters, in Cambridge, accompanied by General Lee, and several other gentlemen. The sentiment felt and expressed throughout the country was, that "under God, Washington must be the saviour of his country." What was their presentiment, is now historically recorded.

General Washington entered on the duties of his new office, under the most discouraging circumstances. He was, indeed, at the head of 14,000 men, but without discipline, without order, and nearly destitute of military stores, and of most of the conveniences necessary to the well being of an army. New efforts and new energies became necessary, and they were applied with effect.

At this time, General Howe commanded the main body of the British army, which was posted on Bunker's Hill. Another division was securely stationed near Roxbury. The fleet covered the reserve and Boston.

The main body of the American army was posted at Cambridge, under the guardianship of the commander-in-chief. The right rested on Roxbury, under General Ward, and the left was securely posted on Prospect Hill, under General Lee. About 3000 men filled the intermediate spaces, under the command of General Putnam and others. The American army, thus posted, held a controlling power, which left the British in a state of siege, or at least of a land blockade.

On the 14th and 22d of June, Congress ordered a battalion of riflemen to be raised in Virginia and Pennsylvania, and such was the spirit of patriotism in these states, that on the 7th of August, they were raised, accoutred, and embodied with the army, without drawing on the public treasury for a single cent.

At this time, the wants of the army were truly embarrassing, and exposed the Americans to great danger, in the event of an attack, which was anticipated. Among the most important, were the want of ammunition and bayonets. Camp equipage and engineers were in great request, and the disaffection of officers, occasioned by

certain appointments of Congress, were truly distressing. Added to this, that many of the troops were to be disbanded in November, and the longest term of service would close with the year. But the zeal, which was the fruit of a righteous cause, prevailed, and they were enabled to conquer their difficulties. Had the enemy known their vulnerable points, the result might have been very different.

The American force had lately been augmented by a reinforcement of 8000 men, and the commander-in-chief of course called a council to settle on a plan of operations for the summer campaign. This council determined on a blockade, as the want of ammunition precluded the idea of an assault on the town. Of the British force, it had been well ascertained, that since the 19th of April, 2500 of the army had, by various means, been lost, and it was thought that before the recruits should arrive in the spring, the army would be much weakened.

About this time, an invitation was sent to New-York, by General Gage, to enlist, as volunteers, the foreign seamen who might be there. In October, Falmouth, in Massachusetts, was burnt by order of the English government, which directed that the towns on the sea-coast should be laid waste for the sin of rebellion. But the step was as impolitic as it was inhuman. The flames of Falmouth, like those of Charlestown, roused the spirit of the colonies afresh, and called forth more union and greater exertions. Frigates and privateers were fitted for sea, and commissioned against the commerce of the enemy, and two battalions of marines were raised for that service. Cruisers were sent out, to intercept supplies, for the British—a spirit of adventure was raised, and success attended it. Captain Manley, of the privateer *Lee*, took a rich store-ship, laden with supplies for the army in Boston, which encouraged the Americans, in proportion as it disheartened and distressed the enemy, for whose use the supplies were much needed.

On hearing tidings of the battle at Lexington, the spirit of South Carolina awakened to the situation of the nation. Her provincial congress was convened, and the following covenant was passed by an unanimous resolution:

Washington Crossing the Alleghany.

“ Thoroughly convinced, that under our present distressed circumstances, we shall be justified before God and man, in resisting force by force: We do unite ourselves, under every tie of religion and honour, and associate as a band of brothers, in defence of our injured country, against every foe; hereby solemnly engaging, that whenever our continental or provincial councils shall decree it necessary, we will go forth and be ready to sacrifice our lives and fortunes to secure her defence and safety. This covenant to continue in force, until a reconciliation shall take place between Great Britain and America, upon constitutional principles; an event which we most heartily desire. And we will hold those persons criminal to the liberty of these colonies, who shall refuse to subscribe to this association.”

The result of this resolution was such as might be expected. Two regiments of infantry, and one of rangers, was raised for common defence, and the language of the day was in unison with that of the other colonies, nearer the seat of danger. Having organized their affairs with a view to the situation of the country, they adjourned. But we must here remark, that South Carolina was not alone in the spirit of resistance. The king's governors were removed from office in the neighbouring colonies, and the people assumed the responsibility of self-government. Committees of safety were appointed, and means taken to attend to their own business in their own way.

The efforts of the colonies, generally, were directed to the supplies wanted by the army near Boston. Powder was purchased in foreign ports—some was obtained from Bermuda, and about three and a half tons was received by General Washington from the British forts on the coast of Africa. The colonies, also, set about the manufacture of this article.

Intelligence was received at head quarters, that the Canadians had received the addresses from Congress in a favourable manner, and that they would not act against the colonies. An expedition was sent out for Quebec, on the 19th of September, consisting of one thousand men, under Col. Arnold, by way of Kennebec. He arrived at his place of destination on the 9th of November, after

traversing a pathless wilderness, and encountering the greatest hardships and privations.

About the same time, General Montgomery entered Canada by way of Lake Champlain, in company with General Schuyler. He laid siege to St. John's, on the 8th of October. Sir Guy Carleton, governor of Canada, with eight hundred men, went to the relief of the place, but the Green Mountain Boys, under Colonel Warner, defeated him. Chamblee was surprised and taken, with six tons of powder, by Brown and Livingston, which was used to reduce St. John's, which surrendered on the 2d of November, and the garrison was made prisoners. During the siege, Colonel Allen invested Montreal, but was defeated, taken prisoner, and sent to England in irons, to be tried for treason.

General Montgomery entered Montreal in triumph, on the 22th of November, and but five days afterwards, eleven sail of vessels, General Prescott, several other officers, and one hundred and twenty privates, a large supply of flour, beef, butter, &c. cannon, small arms, and military stores, were taken. All of these were useful in the prosecution of the war. In the night, Governor Carleton escaped in a canoe, with muffled paddles, and shaped his course for Quebec, where he arrived in safety.

On the first of December, General Montgomery formed a junction with Col. Arnold, before Quebec, and operations to carry it by storm were commenced on the fifth. The garrison of this second Gibraltar, consisted of fifteen hundred men, under command of the governor. Trenches were opened in the depth of a Canadian winter, and the siege was commenced. A council of war was now called, which acceded to the views of the general, and were nearly unanimous in resolving to take the city by assault.

Arrangements were made, and on the morning of the 31st, the signal was given for the attack, by a discharge of rockets. The soldiers advanced with firmness, but the rockets had given warning, and the garrison were prepared to receive them. The first division, commanded by General Montgomery, attempted to enter the lower town by the margin of the river. The first battery was car

ried, and the guard dispersed. The discharge of a single gun from the abandoned battery, killed General Montgomery, Captains Macpherson and Cheesman, with several others; and the troops being appalled, retired, and the enterprise was abandoned. The second division was commanded by Colonel Arnold, who entered the lower town, on the opposite side of the city.

A solitary field-piece, mounted on a sled, commanded by Captain Lamb, next entered, and the main body brought up the rear. Colonel Arnold was wounded by a musket ball in the leg, at the head of the brave band, while forcing the first barrier. The bone was fractured, and he retired from the combat. Colonel Morgan now took the command, carried the first barrier by storm, and assaulted the second, with a prospect of success, not knowing the fate of General Montgomery.

Majors Bigelow and Meigs now came up with about two hundred men. The second barrier was charged, amidst a shower of musketry, and the barrier was mounted. But to their astonishment, a forest of bristly bayonets forbade their entering. On the advance, death was certain, and the danger of a retreat was great. They retired into adjacent buildings, and defended themselves until overpowered by numbers, when they were compelled to surrender. The general was killed, about four hundred men killed and wounded, and, after all their labours and privations, the daring enterprise entirely failed. The loss of General Montgomery was severely felt by the nation, and congress voted to erect a monument to his memory, which was accordingly done, and may be seen in St. Paul's Church, New-York.

CHAPTER VII.

Revolution continued.

IN October, 1775, Gen. Gage was succeeded by General Howe, in command of the British troops at Boston, which had been blockaded through the winter by the army under

Washington. Congress being desirous to support the views of the commander-in-chief, resolved, "That if General Washington, and his council of war, shall be of opinion, that a successful attack may be made upon the troops in Boston, he should make it in any manner he might think expedient, notwithstanding the town, and property in it, might be destroyed."

In the reply of the general, he thus speaks:—"It is not in the pages of history to furnish a case like ours. To maintain a post within musket shot of the enemy, for six months together, without ammunition, and at the same time to disband one army, and recruit another, within that distance of twenty odd British regiments, is more than probably ever was attempted; but if we succeed in the latter, as we have done in the former, I shall think it one of the most fortunate events of my whole life."

That we may be able to judge of the means at this time possessed by Washington, for offensive operations, it is merely necessary to observe, that his whole force consisted of less than nine thousand men, two thousand of whom were utterly destitute of arms. The general pressed congress to raise a regular army for a stipulated time, as a safe project on which the country might securely rely. The propriety of this step was seen by congress, and, on the first of March, the army numbered fourteen thousand, and was soon reinforced by six thousand of the militia, amounting, in all, to twenty thousand. His operations now commenced in good earnest. The detachment at Roxbury was ordered to take possession of Dorchester Heights, while the commander-in-chief was to cover this motion by a bombardment of the town. On the night of the fourth of March this was accomplished, and works thrown up which would secure them from the guns of the enemy.

The light of day opened the eyes of the commanding general to the danger of his situation. One of two things must be done, and that immediately. Either the American troops must be dislodged, or Boston must be evacuated. The English admiral saw that the fleet was at the mercy of the provincials, and the general determined to attempt a dislodgement. Three thousand men were de-

tached for the service, and Lord Percy, who was to command the expedition, actually embarked for the execution of the project. He was, however, providentially prevented from the attempt, by the roughness of the weather. In expectation of this, however, Washington had made preparations to attack Boston the moment the British general should commence a hostile step in this quarter.

Gen. Howe, finding himself very unpleasantly situated, sent a flag of truce to the American head-quarters, notifying General Washington of his intention to evacuate Boston, but threatened to destroy the town, in case he should be molested. On the 16th, at night, the British troops embarked, and the next day sailed for Nantasket Roads, and, in a few days, the whole fleet set sail for Halifax. Immediately after the evacuation of the English army, Washington entered the town, and spread joy through the colonies.

The joy of the inhabitants was excessive, and the general was received with every demonstration of gratitude. They were now relieved from the abuses of an insolent soldiery, and from the distresses occasioned by hunger. A resolution was passed in congress, expressing the thanks of the nation, and a gold medal was ordered to be struck, with an appropriate device, commemorating the event, which should be presented to the commander-in-chief.

In the mean time, the royal governors at the south were not idle. Lord Dunmore, of Virginia, endeavoured to counterwork the revolution. But he was compelled by the patriots of that state to relinquish the attempt, and to go on board the fleet for safety. Chagrined at his defeat, he determined to avenge the affront, and, on the night of the first of January, 1776, he caused fire to be set to Norfolk, which was destroyed. These depredations were continued until they disgusted the most loyal of his party, when he departed with his booty of about one thousand negroes, for Florida and the Bermudas. In North Carolina, the governor attempted the same play, but his plot was defeated, and the insurrection was suppressed by the patriotism and intelligence of the people.

About the middle of February, the American navy,

under Commodore Hopkins, set sail from Cape Henlopen, and soon surprised and dismantled a fort in New-Providence, taking off forty pieces of iron ordnance, and fifteen brass mortars. The governor, lieutenant governor, and one counsellor, fell into the power of the Commodore. In the fore part of March, the fleet captured a British schooner, and, the next day, took a bomb brig, laden with arms and military stores. On the day preceding, the fleet engaged a sloop of war carrying 20 guns, but night separated them, and the next day the sloop escaped into Newport.

When the intelligence of the two first battles between the British and the colonists reached Great Britain, with the information that General Washington was appointed commander-in-chief, the impressions on the people and the government were very serious. The king and the ministry, however, determined to carry on the war. On the 26th of October the parliament was convened, and the speech of the king evidently supported the unnatural controversy. In both houses the opposition was strong, but the ministry prevailed, and the supplies were granted. Sir Peter Parker, and Earl Cornwallis, sailed from Portsmouth in December, for Ireland, with the ships *Acteon* and *Thunderbomb*, as a convoy for the transports, with four thousand troops, intended for service in the colonies. In this fleet came Colonel Allen, who had been confined in Pendinnis Castle, Cornwall, and treated with much severity. A subscription was opened for him, and his companions, in Ireland, which was the first humane attention he had received since his imprisonment.

About this time, the bargain with the King of England, for 17,000 men to be employed in this war, by the Prince of Hesse Cassel, the Duke of Brunswick, and other German princes, was sanctioned in parliament, by a vote of 242 to 88. In the spring of 1776, two divisions of these mercenaries sailed to America. The estimate for the service against the liberties of America, amounted to 60,000 men.

The Cork fleet, under the convoy of Admiral Parker, arrived in Cape Fear River on the 3d of May, where they were joined by General Clinton, from the northern

Ticonderoga taken by the Americans, May 10, 1776.—Page 164.

Sergeant Jasper rescuing the American Flag at Charleston,
June 26th, 1776.—Page 177.

army. On the 5th, the offer of pardon, on certain conditions, was published by the general, but, finding his efforts to stem the tide of popular feeling of little avail, the fleet sailed for Charleston, S. C., and anchored off Sullivan's Island about the first of June. The siege of Charleston was opened by the offer of pardon, as in North Carolina, and with equal effect. The day of proclamations and smooth words had come too late.

Governor Rutledge had prepared for a vigorous defence, and the militia cheerfully rallied around the flag of their country. At this critical moment General Lee appeared at the head of some northern regiments, and took the command of Charleston. The enemy crossed the bar on the 26th of June, with a number of ships and frigates, and operations were commenced with little delay. The fire from the American fort and batteries, however, was too galling, and the squadron was compelled to withdraw, after the loss of one fifty gun ship, and a damage to others, which rendered them for the present useless. One may form an estimate of the contest, by learning the fact that 7000 loose balls were picked up on Sullivan's Island after the battle.

The garrison in the fort consisted of about three hundred and seventy-five regulars, and a few militia, commanded by Colonel Moultrie. The fortification mounted but twenty-six nine pounders, and the British had two ships of fifty guns each, four frigates of twenty-eight guns each, and some smaller vessels.

This severe repulse obtained a respite from the calamities of war, for more than two years, in the southern states.

Of those who deserve an honourable notice in this action, Sergeant Jasper must not be forgotten. During the heat of the engagement, the flag-staff was shot away, and fell into the ditch. The inhabitants of Charleston considered this as a token of submission. When the intrepid sergeant discovered it, he jumped into the ditch, seized the flag, secured it to a sponge-staff, and erected it again in the heat of the action. For this act of bravery, the governor, the next day, presented him a sword.

The result of this battle led to the declaration of inde

pendence. It had blown the spark of liberty into a steady flame, and prepared the minds of the people for an event to which many looked with the deepest solicitude. The spirit which lived in congress, was united by instructions from the colonies, and the country now seemed ripe for entire separation from the mother country. A resolution was moved in congress by Richard Henry Lee, and seconded by John Adams, in the following words, which passed unanimously.

“Resolved, that these United Colonies are, and of right ought to be, free and independent states ; and that all political connexion between them and Great Britain is, and ought to be, dissolved.”

In defence of this motion, Mr. Lee addressed the house in a very animated strain, which he closed in the following language :—“ Why then do we longer delay—why still deliberate ? Let this happy day give birth to the American republic. Let her arise, not to devastate and conquer, but to re-establish the reign of peace, and of the laws. The eyes of Europe are fixed upon us ; she demands of us a living example of freedom, that may contrast, by the felicity of the citizens, with the ever increasing tyranny which desolates her polluted shores. She invites us to prepare an asylum, where the unhappy may find solace, and the persecuted repose. She entreats us to cultivate a propitious soil, where that generous plant, which first sprang up and grew in England, but is now withered by the poisonous blasts of Scottish tyranny, may revive and flourish, sheltering, under its salubrious and interminable shade, all the unfortunate of the human race.

“ This is the end presaged by so many omens, by our first victories, by the present ardour and union, by the flight of Howe, and the pestilence which broke out amongst Dunmore’s people, by the very winds which baffled the enemy’s fleets and transports, and that terrible tempest which engulfed seven hundred vessels upon the coast of Newfoundland. If we are not this day wanting in our duty to our country, the names of the American legislators will be placed, by posterity, at the side of those of Theseus, of Lycurgus, of Romulus, of Numa.

of the three Williams of Nassau, and of all those whose memory has been, and will be, for ever dear to virtuous men, and good citizens."

The members of congress from Pennsylvania and Maryland, were not present, and the deliberations on the subject were postponed to the first of July. On that day the discussion was renewed, and, on the *fourth of July*, 1776, the report of the special committee was adopted, dissolving the allegiance of the colonies to the British crown, and declaring them *free and independent*, under the style of the *Thirteen United States of America*. The committee who drafted this instrument, consisted of Messrs. Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Philip Livingston.

This declaration was signed by all the members of congress, whose names, and the states to which they respectively belonged, were as follows :

John Hancock, *President*, from Massachusetts.

NEW-HAMPSHIRE.

Button Gwinnett,
Lyman Hall,
George Walton.

This declaration was received by the people with transports of joy. Public rejoicings took place in various parts of the Union. In New-York, the statue of George III. was taken down, and the lead, of which it was composed, was converted into musket-balls. In Boston, the garrison was drawn up in King's-street, which, from that moment, took the name of *State-street*, and thirteen salutes, by thirteen detachments, into which the troops were formed, were fired; the bells of the town were rung, in token of felicitation, and the evening concluded with the tearing in pieces and burning the ensigns of royalty—lions, sceptres, and crowns.

 CHAPTER VIII.
Revolution continued.—Capture of New-York.

ON the evacuation of Boston by General Howe, Washington suspected that the possession of New-York would be a favourite object. To prevent this, if possible, he determined to make that city his head-quarters, and thus to prevent its occupation by the British general. He accordingly soon removed to that city, with the principal part of his army.

On the 28th of June, General Howe arrived at Sandy-Hook, near New-York, with his armament from Halifax. where he was joined by his brother, Lord Howe, on the

DECLARATION OF INDEPENDENCE, JULY 4, 1776.

12th of July, with another armament. By the latter arrival, the two brothers were clothed with powers to treat with the United States, collectively or separately. A flag was despatched to Amboy, to announce his commission. This circular was communicated to Congress by General Washington.

The American army at New-York amounted to little more than seventeen thousand men, a part of which force was encamped at Brooklyn, on Long Island. The combined forces of the British amounted to twenty-four thousand, which were landed near the Narrows, nine miles from the city, on the 2d of August. On the 27th, the British forces, under Sir Henry Clinton, Percy, and Cornwallis, attacked the American camp at Long-Island, which was defended by Brigadier-General Sullivan, who was defeated, with the loss of more than a thousand men, while the loss of the British was less than four hundred. Brigadier-Generals Lord Stirling and Woodhull fell into the hands of the English. General Washington perceived with anguish, what would be the result of the battle, but he dare not draw off more troops from the city, as he would not even by that measure, be able to cope with the British. On both sides, this battle was expected. On the 22d, the British effected a landing at Utrecht, near the Narrows, under cover of the ships, and every preparation was made to meet them manfully. Colonel Hand was ordered to the high ground, in order to protect the pass leading to Flatbush. Lord Cornwallis was ordered to secure this pass, if it could be done without an engagement. He halted at the village, finding that the pass was secured by the Americans. On this occasion, Washington issued the following orders :

“The enemy have now landed upon Long Island, the hour is fast approaching in which the honour and success of this army, and the safety of our bleeding country, depend. Remember, officers and soldiers, that you are free-men, fighting for the blessing of liberty ; that slavery will be your portion, and that of your posterity, if you do not acquit yourselves like men. Remember how your courage has been despised and traduced by your cruel invaders, though they have found by dear experience at Boston,

Charlestown, and other places, what a few brave men can do in their own land, and in the best of causes, against hirelings and mercenaries. Be cool, be determined. Do not fire at a distance, but wait for orders from your officers."

Preparations were now made for a pitched battle. The American camp was strengthened by six additional regiments, and all things put in readiness for an immediate attack. The result of the battle has already been related. It left the American camp in the power of the British, who might easily have taken it by an assault, which was threatened.

On the night of the 28th, the British invested the camp in due form. General Washington spent the next day in camp, and on the night of the 29th, effected a most masterly retreat to New-York, under cover of a dense fog. The rear guard only was discovered by the British, and too much advanced to be affected by the shot.

On the 2d of September, two regiments of Americans evacuated Governor's Island, near New-York, with their arms and stores, within a quarter of a mile of the British fleet, with the loss of only an arm by one man.

This was indeed an eventful crisis. The fate of America appeared suspended on the issue of a single battle. The reverses experienced wrought upon the feelings of the soldiers. The militia deserted their colours, and abandoned their general. Sickness and desertion reduced the army, and dispirited the officers. Those whose term of service had expired, left the duties of the camp, and returned to their homes, and a gloom was gathering over the just risen hopes of America. Washington passed two days and nights without sleep or rest, principally on horseback, superintending every movement, and watching every event.

On the contrary, the late success elated the British in proportion to the despondency of the Americans. The movements of the British threatened to cut off the retreat of the continentals. General Washington was led to abandon his unsafe position in the city, and after some successful skirmishes retired to White Plains, in West Chester County, about thirty miles from New-York. The enemy landed, and took possession of the city, and

the Americans retreated. A garrison was left at Fort Washington, about ten miles from the city, on the Island

General Howe, being reinforced by a division or two of Germans, marched towards the American army, encamped at White Plains. On the 28th of October, a general skirmish commenced between the advanced parties. On the 29th, the general moved in columns to the support of his van, and to bring on a general engagement. General Washington kept him at bay until the 31st, when he retired to higher ground, and left a strong rear guard to cover White Plains. The British now abandoned the enterprise, and on the 8th of November drew off his army towards Kingsbridge. On the 15th, he sent a summons to Colonel Magraw, commanding Fort Washington, and the next day stormed the fort, *and put the garrison to the sword.*

General Washington beheld the awful scene, and wept with the feelings of a compassionate father. The shock was felt with the keenest sensibility throughout the American army, and even General Lee wept with indignation at the news of the merciless butchery, and cursed the unrelenting foe.

On the 18th, Lord Cornwallis moved to the attack on Fort Lee; but General Greene drew off the garrison, abandoned the fort, and joined General Washington. On the 22d, General Washington crossed North River, and retired to Newark, where he found himself almost abandoned by the army, and left to the mercy of a victorious, pursuing enemy, with only about three thousand five hundred men to accompany him in his flight. On the 28th, General Washington retired to Brunswick, and Lord Cornwallis entered Newark with his victorious army. His lordship pursued to Brunswick, and General Washington retired to Princeton, December 1st. Lord Cornwallis halted one whole week at Brunswick, agreeable to orders; and, in the mean time, General Washington saw himself abandoned by the Jersey and Maryland brigades of militia, whose terms of service then expired.

On the 7th, his lordship pursued to Princeton, and General Washington retired to Trenton. The next day his lordship entered Trenton, just at the critical moment

that General Washington, with his remnant of an army, had crossed the Delaware,* and secured the boats to prevent his passing,† December 8th, 1776.

General Howe had joined Lord Cornwallis at Newark, and now made a stand at Princeton, and issued the proclamation of the king's commissioners, proffering pardon and peace to all such as should submit in sixty days.

Such were the distresses of the army, and the country, when they saw their liberties about to expire under the pressure of an overwhelming foe, that men of the first distinction, in great numbers, in that part of the country, embraced the overture, and made their submission.

To add to the distresses of this most trying scene, General Lee, who had harassed the rear of the British army, with about three thousand men, was now surprised in his quarters, and taken by the enemy, December 13th. The troops of General Lee, now under the command of General Sullivan, joined General Washington.

During the delay of General Howe at Trenton, General Washington, with the assistance of General Mifflin, collected a body of Pennsylvania militia, and resolved to make a stand, to recover, if possible, the spirits of the army and nation.

On the night of the 25th, General Washington, under cover of a violent snow storm, recrossed the Delaware, commenced an attack upon the British army, and gained a signal victory; took about one thousand prisoners, including an entire regiment of Germans, with their whole encampment, and secured his position at Trenton.

The enemy soon recovered their shock by large reinforcements, and General Washington retired to Princeton by a circuitous march, triumphed over the enemy again, and pursued them to Brunswick. Lord Cornwallis collected all his forces at Brunswick, and made a stand. General Washington took up his position at Morristown, and watched the motions of the enemy.

During these operations in New-Jersey, the British

* General Washington could muster only two thousand two hundred men at this time.

† The same day General Prescott, with a strong British force, took possession of Newport, (Rhode Island.)

Retreat across the Jerseys.—Page 183.

Sufferings of the Army at Valley Forge.—Page 194.

army had thrown up the rein, and given full scope to the brutal passions. This roused the indignation of the people, and rekindled the fire of Lexington, which spread like lightning through the country. New-Jersey then exhibited a scene which was considered but the miniature of what the nation would exhibit should Britain prevail. Husbands saw the fate of their wives; parents of their daughters; and the nation became most seriously alarmed for their safety, and more immediately alive to the interest of the common cause. New-Jersey felt the wound she had received, and roused to the combat, to avenge her wrongs upon the brutal foe.

General Washington surprised Lord Cornwallis at Elizabethtown, and he retired to Amboy, where he was closely invested through the winter. In June following, General Howe drew off his army to Staten Island, and the Jerseys were cleared.

In April, General Howe detached Governor Tryon, with the command of a major-general of provincials, at the head of about two thousand men, to destroy the American stores at Danbury. The general executed this commission, and destroyed one thousand eight hundred barrels of beef, two thousand bushels of wheat, eight hundred barrels of flour, one thousand seven hundred tents, one hundred hogsheads of rum, &c. with the loss of about four hundred men, killed, wounded, and taken by the Americans.

But this expedition cost the British a severe loss. Three generals were in the neighbourhood, Wooster, Arnold, and Sullivan. About six hundred militia were collected in great haste, and followed in pursuit about two miles, during a heavy rain. The next morning the troops were divided. Wooster fell in the rear of the enemy, while Arnold was posted at Ridgefield, in their front. Wooster attacked the enemy, and was mortally wounded in the contest; the troops had to retreat. Arnold gave them a severe reception at Ridgefield, and was repulsed, but renewed the attack during the next day.

The yeomanry of the country through which they passed towards the Sound, constantly annoyed them, and they made a precipitate retreat to their ships, which con-

veyed them to New-York. They lost, in killed, wounded, and missing, about one hundred and seventy; while the loss of the Americans did not exceed one hundred. General Wooster lingered until the 2d of May, and expired in his seventieth year. A monument was voted to his memory by Congress, and a horse, splendidly caparisoned, was presented to Arnold, as a token of respect for his intrepidity and good conduct.

CHAPTER IX.

Evacuation of Canada—Capture of Burgoyne, and fall of Philadelphia.

WE must now return to the affairs in the north. General Montgomery fell at Quebec, and the command devolved on Colonel Arnold, who had been badly wounded. But he was removed to Montreal, and was succeeded by General Thomas. He soon died, and General Sullivan was appointed in his place. The small pox, with other diseases, reduced the number of men to four hundred. The siege was raised, and this handful of men was compelled to retreat for Montreal.

A reinforcement had arrived from England, and the army in Canada was now thirteen thousand strong. With this force Governor Carleton, with Generals Burgoyne, Frazer, Phillips, and Reidesel, advanced in different divisions, in pursuit of Sullivan. General Frazer took post at Trois Rivieres, when the Americans attempted a surprise, but it miscarried, and General Thompson was left in the hands of the English. Carleton pursued with his whole force, but the retreat of Sullivan was secured, and he reached the River Sorel in safety, where he was met by Arnold from Montreal. The troops, baggage, and cannon, were embarked, and they made a stand at Crowa Point, on the 15th of June, 1776.

In the fore part of July, General Sullivan left the command of the northern army, and was succeeded by General Gates. The army was diminished more than 5000

and the ravages of the small pox were dreadfully alarming. About three hundred sick were removed to Fort George. The exertions of Governor Carleton to prepare his fleet to meet the Americans on the lake, were great and unceasing. Early in October, troops were embarked, and operations commenced. A sharp action ensued near Valicour island, and much valour was displayed on both sides. But the Americans were overpowered, dispersed, taken, or destroyed, which enabled the enemy to approach Ticonderoga, on the 11th of October. But this victory was not followed up with spirit. Hostile operations were suspended for the season, and the governor retired into Canada. To the honour of the governor we would here record his humanity to his prisoners, who were often dismissed with kindness, and furnished with necessaries to reach their friends in the United States. These traits in his character are worthy of perpetual remembrance and gratitude.

General Gates discharged the militia, and the campaign was closed.

General Burgoyne succeeded to the command after Carleton, in the spring of 1777. Operations were commenced early at the head of ten thousand men, English and German, commanded by Generals Phillips, Frazer, Powel, Hamilton, and by the German generals, Reidesel and Spicht. The army was well appointed, and well supplied with every facility to ensure a successful campaign. The troops were in fine health and high spirits. To this powerful armament were attached several tribes of Indians, who were to take the field on conditions of humanity; they were not to scalp the wounded, nor their prisoners; but a bounty was to be given for every prisoner taken and brought in alive. In June the army arrived at Crown Point, and on the 19th, operations were commenced against Ticonderoga.

General Gates was succeeded in his command by General Schuyler, who placed this fortress in good order for defence, and gave the command to General St. Clair. The fort was approached on the right wing of the American army on the 2d of July, and possession taken of Mount Defiance. This lies contiguous to Ticonderoga,

and overlooks the fortress. This mount had hitherto been deemed inaccessible, and had remained unoccupied. Cannon were hoisted by tackles, until the force was sufficient to dislodge the garrison. To save the men, the fort was now abandoned, and the American force retired to Hubbardston, and thence to Castleton, where a stand was made, about thirty miles from Ticonderoga.

General Frazer, supported by General Reidesel, commenced a pursuit in the morning, with the light troops of the British and Germans, and overtook the American rear guard under Colonel Warner, at Castleton, and commenced an attack on the 7th, which became sharp and bloody. The British were routed at first, with loss; but finding that Colonel Warner was not supported by General St. Clair, they rallied to the combat, and with the bayonet, charged and dispersed the American rear with the loss of about three hundred men; and Colonel Warner retired with the remainder of his troops to Fort Ann.

General Burgoyne, with the main body of the British army, sailed from Ticonderoga, in pursuit of the American fleet; destroyed and dispersed the whole, and landed at Skeensborough, now Whitehall. He there detached Lieutenant Colonel Hill, with a strong party, to dislodge the Americans from Fort Ann. The garrison marched out on the morning of the 6th, and commenced an attack upon the detachment, which was sharply supported by both parties, for about two hours, with apparent success on the part of the Americans; but a party of Indians appeared and joined Colonel Hill, and the Americans withdrew from the field, abandoned the fortress, and retired to Fort Edward, July 12th. The whole force at this time at Fort Edward, did not exceed 5000 men.

The operations of both armies, were now commenced with vigour. In his retreat, the American general destroyed bridges, and obstructed the roads, to impede the pursuit of Burgoyne; but all these difficulties were surmounted, and on the 30th, the British force reached Fort Edward, which had been abandoned by Schuyler on the 27th. He retired to Saratoga, and on the first of August, removed to Stillwater, only twenty-five miles north of Albany. The nation saw with deep regret, that this rem-

nant of an army was compelled to flee before a victorious enemy, and that those important fortresses were abandoned. These events greatly depressed the spirits of our countrymen, while the foe exulted in the triumph.

On the 3d of August, Colonel St. Ledger was detached by General Burgoyne against Fort Stanwix, as a diversion. To relieve the fort, the general was ordered down with eight hundred militia. Near the fort he fell into an Indian ambush, and was killed in a most severe action. The garrison sallied out, decided the sanguinary contest, drove the Indians, and relieved the fortress. The colonel sent a summons to the fort to surrender, but Colonel Gansevoort returned a prompt and spirited reply, and St. Ledger withdrew precipitately, and returned to the lake.

During these movements, General Washington detached General Lincoln to the northward, to take command of such eastern militia as might join the northern army. General Lincoln arrived at Manchester, on the 2d of August, where he took the command of six hundred militia, and on the 6th, he was joined by General Stark, with eight hundred more.

General Stark was a soldier of merit, and had deserved well of his country, by his distinguished services in the famous battle of Bunker's Hill; but he had felt himself wounded by the neglect of Congress, after the battle, and retired from service. He engaged at this time in the service of his country, upon the express condition that he should not be constrained to serve under a continental officer; he accordingly resisted the pressing solicitations of General Schuyler, to join him in checking the progress of General Burgoyne.

Congress interposed in this controversy; and at this eventful moment, General Burgoyne detached Colonel Baum, with five hundred Germans, and one hundred Indians, to seize on the American stores at Bennington, to enable him to pursue his march to Albany. General Stark was apprised of this movement, and sent expresses to collect the neighbouring militia, and marched to meet the enemy on the 14th, supported by Colonels Warner, Williams, and Brush. The advance parties of the two armies met, and commenced a skirmishing, that continued through the day

On the 15th, all operations were suspended by the excessive rains that fell; but on the 16th, General Stark was joined by the Berkshire militia, under Colonel Symonds, and he detached Nichols to take post in the rear of the enemy, on the left; Colonel Hendrick to take post in the rear of his right, to be supported by Colonels Hubbard and Stickley, still further on the right. About 3 o'clock in the afternoon, General Stark commenced an attack upon the enemy, strongly intrenched, and supported by two field pieces. The attack became general, and was valiantly supported on both sides; the Indians fled: the Germans were overpowered, forced from their intrenchments, and put to flight. The militia, flushed with the successes of the day, abandoned the pursuit, and gave themselves up to plunder.

At this eventful moment, Lieutenant-Colonel Breyman joined Colonel Baum with a reinforcement; they rallied to the charge, and renewed the combat. Colonel Warner led on his regiment of continentals, at this critical moment, and supported the action until the militia could recover their order, and advance to the charge. The action soon became general, and continued through the day. The Germans again gave way, and secured their retreat under cover of the night, leaving their artillery, baggage, &c. with two hundred slain, and seven hundred prisoners, among whom was colonel Baum. This was an important action, and proved ruinous to General Burgoyne.

This action was highly applauded, and a brigadier's commission was made out for Colonel Stark, in the continental service. This success gave fresh courage to the Americans, and the public pulse beat high with expectation. General Gates now took command of the army, and the militia joined the army with alacrity. On the rear of the British army was an American force under General Lincoln, and on the 18th, General Brown destroyed the British stores at Lake George, releasing a number of American prisoners. Successful operations were also commenced against Ticonderoga, and Skeensborough, now Whitehall. General Burgoyne had crossed the Hudson, and finally took post at Stillwater, but three miles from General Gates.

On the 18th of September, General Gates detached about 3000 men to offer the enemy battle; but he declined the combat. On the 19th, the scouting parties of the two armies commenced a skirmishing, that led to a general action, which continued through the day, and was supported with great zeal and intrepid bravery. Night closed the scene, and the two generals drew off their armies, to protect their camps, and waited with impatience the returning day.

In this action, the American loss was about three hundred, and that of the English about five hundred.

The American strength was now about seven thousand, not including about two thousand under General Lincoln, who were then at Bennington. The Indian allies of Great Britain were deserting the standard of General Burgoyne since the late contest, and four of the six nations favoured the cause of America, and furnished one hundred and fifty warriors. The troops under General Lincoln now added to the force under General Gates, and revived the spirits of the army.

Until the 7th of October, the armies were within common shot, and skirmishes were frequent and severe. The armies were harassed and alarmed. The situation of Burgoyne was becoming critical, and he applied to Sir Henry Clinton for relief. The latter had just received two thousand men from Europe, and commenced operations by the capture of West Point, a strong fortress on the Hudson. He was then enabled to clear the obstructions on the river, and leave a free passage for his shipping. Of all this General Burgoyne had intelligence, but too late to render him any service.

As General Burgoyne determined on a retreat, he sent forward a strong party on one side, while he headed another, supported by General Frazer, and a contest was commenced immediately, and lasted through the day. Victory perched on the American standard, and they were successful at all points. General Arnold fought desperately, and received a wound in the action. General Frazer,* and Sir James Clark, were mortally wounded, and

* In the heat of the action, Colonel Morgan, (the future hero of the battle of Cowpens,) selected several of his sharp shooters, and pointing

the latter became a prisoner. General Burgoyne changed his position in the night, and the Americans spoiled the British camp.

The British now expected a momentary attack, and were under arms all the day on the 8th, and at sunset, the last honours were paid to the remains of the much lamented Frazer. On the 9th, the English army was so closely invested, that the commander resolved on a retreat to Saratoga. This was effected with no other loss than that of his hospital of sick and wounded, which he was compelled to abandon to the mercy of General Gates, who did honour to his character, in the display of his benevolent feelings in behalf of the sufferers.

General Burgoyne now perceived that all the passes in his rear were strongly guarded, and that further retreat was next to impossible. In this difficulty, he called a council, on the 13th. While the council was deliberating, an eighteen pound shot crossed the table, and they resolved unanimously to propose terms with General Gates. The proposals of General Gates were rejected, and General Burgoyne then sent in terms on which the capitulation was finally made.

The news of the capture in the Highlands, is said to have arrived at this juncture, which led General Burgoyne to hesitate, in expectation of relief from Sir Henry Clinton. General Gates, seizing the critical moment, drew up his army in battle array, and sent in a flag, demanding a reply in ten minutes. The responsibility was great, and Burgoyne felt it. The treaty was signed, and returned in due time.

The whole British army marched out of their lines, deposited their arms, and became prisoners of war. General Gates marched in under the tune of Yankee Doodle, and took quiet possession. General Gates ordered supplies to be issued to the British army, who were destitute, and the solemn scene was closed.

them to a British officer who appeared most conspicuously active in his duty, at the head of his division, mounted upon an iron gray charger, thus addressed them: "That gallant officer is General Frazer; I admire and respect him; but it is necessary that he should die; take your station in that wood, and do your duty." It is unnecessary to add, that General Frazer soon fell, mortally wounded.

Such, and so various are the scenes of life, and the fates of men ; such, and so fickle is the fortune of war ; but firm and unshaken is the providence of God ; wisdom, and might, and strength, are His.

Sir Henry Clinton detached Sir James Wallace, and General Vaughn, with a flying squadron, carrying 3600 troops, to penetrate, if possible, to the camp of Burgoyne, or make a diversion in his favour ; but learning the situation of General Burgoyne, at Esopus, on the 13th, they set fire to the village, and consumed it. Had they proceeded to Albany, they might have destroyed the place, with the American stores, and Burgoyne might have been relieved. The inquiry has often been made, why this unnecessary delay ? But no other answer can be given, than this ; *it was the special providence of God.*

The army of General Burgoyne was marched directly to Boston, where they were detained as prisoners of war.

Having thus restored tranquillity in the north, the army under General Gates marched to support General Putnam at Kingston, and guard the country from the incursions of the British. The alarm was taken, and the enemy hastened back to New-York.

We will now take a look at the transactions of the conquering army of New-York. About the time that victory perched on the British standard on Lake Champlain, under the direction of Burgoyne, General Howe embarked with about sixteen thousand troops, with two hundred and sixty sail, and on the 23d of July, went to sea on a private expedition, to make a diversion at the south. General Washington then made a movement towards Delaware, that he might cover Philadelphia. General Howe, manœuvred on the coast some days, and finally entered the Chesapeake. Washington advanced to meet him. The British troops were landed at Elk River ferry, and the two armies met at Chad's Ford, on the Brandywine, where an action was fought on the 11th of September. Victory declared for the English, and Washington retired to the high grounds, to watch the enemy. Philadelphia was entered on the 26th, when Congress retired to Lancaster.

About this time the Marquis La Fayette arrived in the

United States, and tendered his services to Congress, and he received a commission as brigadier general in the service. He joined the army, and served at his own expense, and soon became the companion and the friend of Washington. His talents as a soldier were first displayed at Chad's Ford, where he received a wound in the leg, the effects of which he still carries. The Count Pulaski,

Polish gentleman, also distinguished himself in the battle, and was honoured with the commission of Major General.

The fleet of Lord Howe was now ordered into the Delaware, that his communication with the ocean might remain secure.

While the fleet was thus employed, Washington attempted to cut off the main body of the British army, encamped at Germantown, seven miles from the city.—The attack was well concerted, and executed promptly.

The British were completely surprised, at break of day, October 4th; at sunrise, the action became warm, and the Americans were successful at all points, until they attempted to dislodge a battalion of the British, who, in their flight, had thrown themselves into a stone house;—this occasioned a delay, broke the pursuit, and gave the enemy time to recover from their surprise, and rally to the charge; the action soon became warm and bloody. A thick fog arose, which covered the combatants, and caused some confusion; the enemy took advantage of this, the Americans retired, and abandoned the victory they had so fairly gained.

The losses of the parties were about equal; but it proved a lesson of caution to General Howe. He collected his army at Philadelphia, where he was closely invested by General Washington, through the winter; which occasioned the remark of Dr. Franklin: "*Philadelphia has taken Howe.*"

The privations of the American army were truly distressing; without clothes, shoes, stockings, and even breeches and blankets; more than two thousand were marched through the snow, imprinting the roads with their blood-stained steps; yet all this was endured with a firmness worthy of those valiant sons of liberty.

Dr. Benjamin Franklin had now been more than a year

in France urging the government of that country to acknowledge our independence, and to enter into a treaty of alliance. These objects were effected, after the fall of Burgoyne had manifested the probability that the Americans could maintain their independent stand single handed. A treaty was signed on the sixth of February, by which it was agreed, that "neither of the contracting powers was to make war or peace, without the formal consent of the other." The treaty was soon known in London, and the British government determined to evacuate Philadelphia, and concentrate the royal forces in New-York. On the 18th of June, the royal army crossed the Delaware on the road to New-York. But Washington had foreseen this, and prepared the militia of New-Jersey to give the British a troublesome march.

He crossed the Delaware in pursuit, and the hostile armies met at Monmouth on the 28th, sixty-four miles from Philadelphia. The contest was severe, and the weather so hot, that numbers of both armies perished from that cause, and the use of water, when it could be obtained. The American army remained on the battle ground, intending to renew the contest in the morning, but the enemy made good a retreat. The loss of the Americans was eight officers, and sixty-one privates killed, and one hundred and sixty wounded. The British loss, in killed, wounded, and missing, was three hundred and fifty-eight men, including officers. One hundred prisoners were taken, and the loss by desertion was one thousand. Sir Henry retired, by forced marches, to Sandy Hook, where he was taken on board the fleet, and embarked the army for New-York.

General Lee has been censured by a court-martial for disobedience of orders on this occasion. It appears that he first declined a particular command, and then asked for it. Washington directed him to commence the attack, "unless there should be powerful reasons to the contrary," and his disobedience, "and doubtful movements," appear to have marred the expected success, and justified the event, in depriving him of his command.

The French government, on the terms of the treaty, had now entered into the war.

On the 8th of July, Count D'Estaing entered the capes of the Delaware, with the Toulon fleet, after a passage of eighty-seven days; Lord Howe had been gone only eleven days, and Sir Henry Clinton had evacuated Philadelphia only one month before, and was now embarking his army at Sandy Hook, for New-York. The French fleet was about double the force of the English, both in the number of ships, and weight of metal.

Count D'Estaing landed Mr. Gerard, French minister to the United States, who was most cordially received by congress, and on the 9th set sail for Sandy Hook, where he arrived on the 11th, and blockaded the English squadron in the harbour. The count made all possible efforts to attack the English fleet in the harbour, but found it impracticable to cross the bar with his heavy ships, and, on the 22d, agreeable to advice from General Washington, he set sail for Newport, to co-operate in the destruction of the British fleet and army, at Rhode Island.

Admiral Byron's squadron arrived at Sandy Hook a few days after the departure of the French fleet, in a very broken, sickly, dismasted, distressed situation. The provision ships from Cork, arrived also, and entered the harbour of New-York in safety, to the inexpressible joy of the British army, who were in great want of supplies.

Count D'Estaing arrived off Point Judith on the 29th of July, and such was the joy upon the occasion, that it diffused the fire and zeal of 1775, and 1776, throughout New-England. Volunteers, by thousands, flocked to the standard of their country to join General Sullivan, and co-operate with their illustrious allies in the reduction of Rhode Island.

General Washington had detached the Marquis La Fayette, and General Greene, with two thousand men, to join the general enterprise. The American force was now about ten thousand strong.

Sir Robert Pigot, who commanded at Newport, had been reinforced with five battalions, which rendered his force about six thousand strong. Thus balanced, the parties commenced their operations.

The Count D'Estaing entered the harbour of Newport on the 18th of August, without opposition; General Pigot,

having destroyed the English shipping on the 5th, to prevent their falling into the hands of the French.

On the 9th, at eight in the morning, General Sullivan began to cross over with his army from Tiverton, the enemy having abandoned their works at the north end of the island. At two in the morning, Lord Howe appeared off Point Judith, with a fleet of twenty-five sail of the line, where he anchored for the night.

On the 10th, Count D'Estaing, eager to meet the British fleet, took advantage of the wind, and put to sea. The two fleets manœuvred through the day, without coming to action. On the 11th, a violent gale sprang up, and continued through the 12th and 13th, which parted the fleets, dismasted the French Admiral's ship, destroyed her rudder, and greatly damaged several others.

On the 14th, the gale abated, and close and severe actions commenced between several single ships of the two fleets, but nothing decisive. The Count, having collected six of his ships, covered his disabled fleet, and stood in for Newport, and came to anchor.

General Greene and the Marquis La Fayette went on board the Admiral's ship, and pressed him to enter the harbour of Newport, and complete the enterprise; but the fleet was so shattered by the storm, and the officers were generally so averse, that the Count concluded to sail for Boston.

The troops under General Sullivan had gained the north end of the island, and marched down upon the enemy's lines, ready to co-operate with the French fleet, and commence the attack; but their sufferings in the storm were so severe, that the troops were in a deplorable state.

On the 15th, the American army had recovered from their misfortunes, and were again prepared for action. In this situation, they continued anxiously waiting the movements of the French fleet, to join in the general attack; but, to their grief and astonishment, they saw them weigh and stand off for Boston, on the 24th. The mortification of General Sullivan was greater than the pride of an American soldier could sustain, and he expressed himself unguardedly, in his general orders, on the occasion.

On the 28th, Count D'Estaing wrote to Congress, from Boston, and explained his movements, to the satisfaction of that honourable body.

General Sullivan soon saw himself abandoned by most of the volunteers, which reduced his army to a standard below that of the enemy, and he hastened to secure his retreat.

On the 25th, General Sullivan sent off his heavy cannon, and on the 29th, he retired to the north end of the island. General Pigot pursued with his whole force, to intercept his retreat. The advance guard of the enemy was soon engaged with the rear guard of the Americans, and a severe action ensued, that continued through the day. The next day, General Sullivan learnt that Lord Howe was again at sea, and that the French fleet was not expected to return to Newport, and he hastened to evacuate the island.

General Sullivan, with the advice and assistance of General Greene and the Marquis La Fayette, conducted his retreat in the presence of a superior foe, whose sentries were not more than 400 yards distant from the American sentries; and on the morning of the 1st of September, 1778, the retreat was accomplished without the loss of a man, or any part of the artillery or baggage.

The same day Sir Henry Clinton arrived off Newport, on board of the fleet under Lord Howe, with four thousand troops, to cut off the American retreat; but learning the departure of the French for Boston, and the retreat of the Americans, he set sail for Boston, in pursuit of the French. On the morning of the 3d, he discovered the French fleet in the harbour of Boston, strongly posted, and returned to New-York. On the 5th, Lord Howe commenced an attack upon the American shipping in Bedford harbour, and destroyed about seventy sail, besides small craft, stores, dwelling houses, and vessels on the stocks, together with the magazine, to the amount of 20,000*l.* sterling.

His lordship next commenced an attack upon Martha's Vineyard, destroyed all the vessels, and carried off the arms of the militia, the public money, 300 oxen, and 10,000 sheep, and returned to New-York.

The following extract of a letter from General Washington, shall close the chapter :

“It is not a little pleasing, nor less wonderful, to contemplate, that after two years manœuvring, and undergoing the strangest vicissitudes that perhaps ever attended any one contest since the creation, both armies are brought back to the very point they set out from, and the offending party, in the beginning, is reduced to the spade and pick-axe for defence. The hand of Providence has been so conspicuous in all this, that he must be worse than an infidel that lacks faith, and more than wicked, that has not gratitude enough to acknowledge his obligations.”

CHAPTER X.

Operations of the Revolutionary War—Continued.

THE British, finding the instability of their dependence on the success of their arms, determined to accomplish their object by the arts of diplomacy. An attempt was made to bribe a Mr. Reed, and other members of congress, to assist in reconciling the Americans to the English government. The instrument of this attempt was George Johnston, Esq. one of the British commissioners. Mr. Reed replied—“I am not worth buying, but such as I am, the King of England is not rich enough to do it.” The facts were disclosed to congress, and excited considerable feeling.

Congress then resolved, that all letters addressed to members of congress by British commissioners, or agents, on any subjects of the King of Great Britain, of a public nature, should be laid before that body. To this resolution, a spirited reply was made from New-York by Johnston, and a total disavowal of the facts, on the part of Sir Henry Clinton, Lord Carlisle, and Mr. Eden. At the same time, a ratification of the convention of Saratoga was tendered, that the troops of Burgoyne might be suffered to embark for England. This was declined by congress, unless ratified by the British government.

The commissioners then appealed to the people, and this was favoured by congress, trusting that the good sense of the inhabitants would treat it with contempt, and cover the authors with lasting disgrace. Chagrined by their failure in this insidious measure, they denounced the American government in a manifesto, threatening the American people with destruction, if determined to persevere in their rebellion, and adhere to their alliance with France. This idle threat was fairly met by congress, by a developement of the mode of warfare adopted by the enemy, and was thus concluded :

“ If our enemies presume to execute their threats, or persist in their present career of barbarity, we will take such exemplary vengeance as shall deter others from a like conduct. We appeal to that God who is the searcher of hearts, for the rectitude of our intentions, and in his holy presence declare, that as we are not moved by any light or hasty suggestions of anger or revenge, so, through every possible change of fortune, we will adhere to this our determination.”

Dr. Franklin, till now a commissioner at the French court, was appointed minister plenipotentiary to the court of Versailles, with instructions to negotiate for an expedition to Canada. About this time, the *Sieur Gerard* delivered his credentials to congress, and was recognised as a minister from the French court.

The *Marquis La Fayette*, at this time, requested leave to return to France, to which congress readily consented, and directed the president to express to him, by letter, the thanks of congress, for that disinterested zeal that led him to America, as well as those services he had rendered the United States, by the exertions of his courage and abilities, on many signal occasions. They also directed *Dr. Franklin* to cause an elegant sword to be made, with proper devices, and presented to the marquis, in the name of the United States. Congress, at the same time, addressed a letter to the King of France, expressive of the high sense they entertained of the talents and services of the marquis. He took his leave of congress by letter, repaired to Boston, and embarked for France.

Pending these movements, the Indians, in concert with

the tories, began their ravages upon the Susquehannah, entered the settlements in a body of about sixteen hundred; defeated Colonel Butler, at the head of about four hundred men, and cut off his party with a terrible slaughter. They took one small fort at Kingston, and then carried Fort Wilkesbarre; butchered the garrison, and burnt the women and children in the barracks. They next proceeded to lay waste the settlements with fire and sword, and destroyed the cattle in the most wanton and barbarous manner; but spared the persons and property of the tories.

Sir Henry Clinton detached Captain Ferguson, with about three hundred men, upon an expedition to Little Egg-Harbour, under a strong convoy, to destroy the American shipping and privateers; but these being removed, Captain Ferguson proceeded up to Chesnut Neck, where he destroyed such vessels as were there, together with the whole village, and laid waste the adjacent country, and rejoined the squadron.—October 5th.

On the 15th, the convoy, with the troops, moved round to another landing place not far distant, and landed two hundred and fifty men under the command of Captain Ferguson, who advanced into the country in the silence of night, and surprised Count Pulaski's light infantry; killed the Baron De Base and Lieutenant De la Broderic, with fifty privates. These were mostly butchered in cold blood, begging for mercy, under the orders of *no quarters*, as before; but Count Pulaski closed this horrid scene, by a sudden charge of his cavalry, that put to flight the murderous foe, and thus saved the remnant of his infantry. Captain Ferguson made a hasty retreat, embarked his party, and returned to New-York.

Admiral Graves arrived at New-York, on the 16th of October, in a most shattered condition, by a violent storm which detained him the remainder of the month, to repair the fleet. About the first of November he put to sea, and appeared off the harbour of Boston, on a visit to the Count D'Estaing; but a violent storm here overtook him, scattered his fleet, destroyed the Somerset of 64 guns, on the shores of Cape Cod, and forced the rest into Rhode Island for shelter.

From this time the war assumed a most savage aspect.

and exhibited the most unrelenting barbarity. Except in few instances, the rules of civilized warriors seemed hardly to be known, and the combatants seemed mutually determined on a war of extermination. The war was carried anew into the Susquehannah country. Col. Wm. Butler, at the head of a Pennsylvania regiment, with a band of riflemen, led an expedition to the Indian villages, which he destroyed, and after enduring the greatest hardships, returned in safety in sixteen days. To avenge this incursion, Colonel John Butler, at the head of a strong party, surprised Colonel Alden at Cherry Valley, who was killed, and the greatest cruelties were perpetrated. Fifty or sixty men, women, and children, were killed or made captives, and even the dead were made monuments of savage barbarities.

All further designs against the north, seemed now to be abandoned. Clinton and Prescott, who commanded in East Florida, concerted a plan of operations against Georgia. Before this could be carried into effect, two parties entered Georgia from Florida, one by land, and the other by water. The latter advanced to Sunbury, and summoned the place to surrender, but receiving a spirited reply from Colonel Mackintosh, the attempt was abandoned. The other party made for Savannah, but being firmly opposed by General Screven and Colonel Elbert, nothing was effected, if we except the plundering of negroes and cattle, and the commission of the most wanton barbarities. Colonel Screven was killed in the defence.

On the 27th of November, 1778, Colonel Campbell embarked at Sandy Hook, at the head of one regiment, two battalions of regulars, and four of Tories, with a detachment of artillery, in all about twenty-five hundred men, and arrived at the mouth of the Savannah, the latter part of December, and soon landed his troops. General R. Howe was posted in this place, at the head of about eight hundred militia and regulars, worn down by a fruitless expedition against Florida. He chose a judicious position to cover Savannah, but was out-generaled, surprised in camp, and routed with a considerable loss of men and arms. The fort, with its contents, forty-eight pieces of cannon, twenty-three mortars, all the shipping, a large store of provisions, and the capital of the state,

fell into the hands of the victors. The defenceless inhabitants were bayoneted in the streets, and the remnant of the troops escaped to South Carolina. About this time, Sunbury fell into the hands of General Prescott who marched to Savannah, and took command of the royal army. The inhabitants were directed to lay down their arms, or use them in support of the royal cause.

On the 25th of September, General Lincoln was appointed to the command of the southern army, but he did not arrive at Charleston until the 4th of December. He was joined by General Ashe and Rutherford, with about two thousand North Carolina militia, destined to act in defence of South Carolina.

As Georgia was the point of attack, General Lincoln raised something less than a thousand men, and joined the remains of the troops under Colonel Elbert, establishing his head quarters at Purysburg. Here he found himself at the head of but fourteen hundred men, and even this small force destitute of arms, cannon, tents, and almost of powder and lead. The militia of South Carolina were without discipline or subordination, and on the 24th of January, 1779, they had generally returned to their homes. About eleven hundred militia from North Carolina supplied their place, and the whole force was about twenty-four hundred.

General Prescott had taken possession of Port Royal Island, South Carolina, and General Moultrie, at the head of the Charleston militia, attacked the island, dislodged the enemy, and compelled the Colonel to retire into Georgia, with much loss. He took post at Augusta, and by fomenting divisions, and encouraging insurrections, caused much distress. But a party from the district of Ninety-six, under Colonel Pickens, pursued the banditti, which they overtook, routed, killed, or dispersed, and their leader, Colonel Boyd, was slain. The remainder threw themselves on the clemency of the state. Seventy were tried, convicted, and sentenced to death, but the sentence was executed on five of the principals only, and the remainder were pardoned.

General Lincoln determined to dislodge the enemy from Georgia, and directed General Williamson to take a strong

position near Augusta, to watch the motions of Colonel Campbell; and General Ashe was ordered to the support of General Williamson, with about two thousand men. On receiving the intelligence of this junction, the British retired about fourteen miles down the river. Measures were concerted by the American generals, and the plan of operations settled.

About this time, Colonel Provost gained the rear of the American camp by a circuitous march, and commenced a furious attack. The continentals advanced to the charge, to check the invaders; but the militia were panic struck, and flight ensued. The regulars, under General Elbert, were cut to pieces, and the militia, under General Ashe, never returned. The Americans lost one hundred and fifty killed, and one hundred and sixty-two captured. The wounded not numbered. About four hundred and fifty rejoined General Lincoln. Georgia now belonged to the enemy, and a free communication was opened with the tories of South Carolina.

In this state of alarm, John Rutledge was appointed governor of the state, and to him and the council was given a dictatorial power. A large body of militia was assembled at Orangeburg, near the centre of the state, to act as might be required. General Williamson sent parties into Georgia to distress and plunder the enemy. On this, General Lincoln remarked to the governor, that the innocent and the guilty, the aged and infirm, women and children, would be equally exposed to the effects of this order. General Lincoln was now reinforced at his camp, Black Swamp, and advanced into Georgia, leaving a strong guard under General Moultrie, at Purysburg. Prescott permitted the Americans to advance one hundred and fifty miles, that he might surprise General Moultrie. Moultrie eluded the attack, by a change of position.

General Lincoln, learning the movements of Prescott, moved by forced marches in support of Moultrie, and to cover Charleston. The governor took alarm by the movements of Prescott, and destroyed the suburbs that he might guard against the advance of the enemy. The neighbouring militia were called in to join his troops in defence of Charleston.

On the 11th, General Prescott crossed the ferry, and appeared before Charleston, on which day the Count Pulaski arrived, and entered into the defence of this city with spirit. The object of General Prescott was, to carry the town before General Lincoln could arrive, and his operations were conducted with such vigour, that the civil authority sent out the following proposition.

“South Carolina will remain in a state of neutrality till the close of the war, and then follow the fate of her neighbours, on condition the royal army withdraw.” To which General Prescott replied: “The garrison are in arms, and they shall surrender prisoners of war.”

Before General Prescott could accomplish any thing of importance, General Lincoln arrived, and the enemy withdrew to Beaufort, and thence to Georgia. Plunder and devastation marked their steps. Slaves to the number of three thousand were taken, and sent for sale to the West-Indies.

An expedition was fitted out by Sir Henry Clinton, under Sir George Collier, and General Matthews, from New-York, who took possession of Portsmouth, and the remains of Norfolk, in Virginia, in May, 1779. On the same day a detachment was sent to Suffolk, and destroyed provisions, naval stores, and vessels, leaving the town in ashes, and gentlemen's seats, as well as plantations, were burnt and ravaged. On the coast the same ravages were committed by the fleet. About one hundred and thirty vessels were destroyed or captured, with about three thousand hogsheads of tobacco.

About this time a successful attempt was made against Stoney Point and Verplank, by Sir Henry Clinton, after which he went forward to the Highlands.

Previous to these operations, Sir Henry Clinton had concerted measures with the tories and British under his command, to assume a general system of predatory war in America, and submitted his plans to the British ministry, who expressed their approbation. This plan soon reached the American commission, at Paris, and was communicated to Governor Trumbull, of Connecticut, on the 6th of April, 1779.

Sir Henry Clinton detached General Tryon, (late Go

vernor of New-York,) with 2600 land forces, protected by a squadron under Sir George Collier, and supported by General Garth, to begin their depredations in Connecticut. On the 4th of July, the armament moved into the Sound, and the commanders issued their proclamation to the citizens of Connecticut, offering pardon and protection to all such as would return to their allegiance, but threatening ruin and destruction to all who should reject this overture. On the morning of the 6th, General Tryon landed his division at East-Haven; General Garth landed at the same time at West-Haven, and proceeded directly to New-Haven, and gave up the town to promiscuous pillage. The militia collected so fast on the next day, that the enemy abandoned the town in haste, burnt several stores on long wharf, and embarked their troops.

The infamous Tryon next proceeded to the plunder of East-Haven, and then sailed for Fairfield. The town and vicinity were laid in ruins, and the enemy embarked for Norwalk, which was next laid in ashes. He then returned to New-York.

In this incursion, four houses for public worship, near one hundred dwellings, eighty barns, about thirty stores, seventeen shops, four mills, and five vessels, were burnt. And, in addition to this destruction of property, the greatest acts of brutality were perpetrated. Women were insulted and abused, while their apparel was robbed, and desks, trunks, and closets, were rifled.

But a plan was concerted by General Washington, which kept in check this hero of rapine and conflagration. This plan issued in the capture of Stoney Point, on the Hudson.

General Wayne commenced his movements against Stoney Point, on the 15th, at noon; and, after having crossed the mountains, through dangerous and difficult defiles, he approached the fort about eight of the same evening. Having reconnoitered the position of the enemy, the general put himself at the head of his brave troops, and, at twenty minutes past twelve precisely, on the night of the 16th, entered the fort with screwed bayonets, amidst a most tremendous fire of musket and grape, and carried the fortress without firing a gun. Lieute-

nant-Colonel Fleury entered the fort with his division, upon the opposite side, at the same time, and both parties met in the centre ; but the garrison was spared and made prisoners of war, to the number of five hundred and forty-three. General Wayne dismantled the fort, and brought off the cannon, stores, &c. agreeable to orders.

Congress passed a vote of thanks to General Washington, General Wayne, and the officers and soldiers under their command, for the masterly exploit in the capture of Stoney Point.

The English, having persuaded the six nations, excepting the Oneidas, to take up the hatchet against the United States, General Sullivan was sent with a detachment of from four to five thousand men to chastise them. He marched up the Susquehannah, and attacked them in their fortifications, which were well constructed. The resistance was obstinate, but they were compelled to yield, and took to flight. According to his instructions, their country was devastated, and one hundred and sixty thousand bushels of corn were consumed.

The attention of the reader will now be turned to the ocean, where the brilliant achievements of our hardy tars struck with terror "the mistress of the seas."

About the last of July, the American captain, John Paul Jones, sailed from port L'Orient, in France, on a cruise, on board the French ship, the *Bon Homme Richard*, of forty guns, and 375 men, accompanied by the frigates *Alliance*, of thirty-six guns, *Pallas*, thirty-two guns, and the *Vengeance*, an armed brig of twelve guns, and a cutter. Commodore Jones cruised off the coast of Scotland, with his little squadron, until he fell in with the homeward bound Baltic fleet, under the convoy of the *Serapis*, Captain Pierson, and Countess of Scarborough, Captain Percy. When Captain Pierson discovered Commodore Jones, he made sail to cover the convoy, and gave signal at the same time for the Countess of Scarborough to join him, which was immediately done, Sept. 23.

Commodore Jones immediately laid his ship along side of the *Serapis*, and commenced an action, which soon became desperate ; but the *Serapis* appeared to reap advantage from her superior management. To obviate this,

Commodore Jones laid his ship across the bow of the *Serapis*, and the ships grappled, yard arm and yard arm, and the muzzles of their guns were nearly in contact. In this position they lay, vomiting forth death, and strewing the decks with carnage and destruction, about two hours. Both ships were frequently on fire, but the *Serapis* not less than ten or twelve times.

The *Alliance* attempted to co-operate in the action, and with some good effect, until the darkness of the evening rendered it impossible to distinguish correctly, when she killed eleven men, and wounded several others, on board the *Bon Homme Richard*. At this critical moment the *Serapis* struck, and closed the sanguinary scene. The *Bon Homme Richard*, at the close of the action, was so much of a wreck as to have seven feet of water in her hold, which rendered it necessary to remove the crew on board the *Serapis*, and the wounded on board the *Pallas*. On the 24th, her pumps were closely plied; but on the 25th, she went down; fortunately no lives were lost.

The *Pallas* engaged and took the Countess of Scarborough, at the same time, and Commodore Jones sailed with his prizes for the coast of Holland, and anchored off the Texel.

We shall now return to the operations in the southern states.

Instead of pursuing General Prescott in his retreat to Georgia, General Lincoln devoted all his powers and strength to the defence of Charleston, against any further attack. After learning the success of the Count D'Estaing in the West Indies, Governor Rutledge, General Lincoln, and the French Consul, wrote to the count, inviting him to co-operate with the Americans in the reduction of Savannah. The invitation was accepted, and on the first of September he arrived off Charleston, with a fleet of twenty sail of the line, two of fifty guns, and eleven frigates. A British eighty gun ship and three frigates were taken by surprise.

On the arrival of the count, General Lincoln marched with all his troops for Savannah. The fleet sailed to join him; the French troops were landed in ten or twelve days, and Count D'Estaing summoned the town to surren

der to the arms of the King of France. General Lincoln remonstrated against this, as the Americans were acting in concert. The Count persisted, and General Prescott demanded a cessation of hostilities for twenty-four hours, to deliberate, which was granted. During this time, seven or eight hundred troops arrived from Beaufort, and General Prescott determined to defend the town to the last extremity. The count saw his error, and consulted General Lincoln, and they united their efforts to carry the town by a regular siege.

On the 23d of September the allies broke ground, and commenced their operations. On the 4th of October, they opened their batteries, and began to play upon the town with nine mortars, and fifty-four pieces of cannon, which continued four or five days without intermission, but without any apparent effect. On the morning of the 8th, the enemy sallied out, and attempted to set fire to the abattis; but the materials were green, the weather moist, and the attempt failed. General Prescott next requested, that the women and children might be removed; but this was refused, and the allies resolved to carry the town by storm.

The morning of the 9th was the time agreed upon, and the assault commenced. The attack was well concerted, and bravely executed, by the allies; yet the fire of the enemy was so destructive, that the troops gave way, after having planted the French and American standards upon the British redoubts. At this eventful moment the brave Count Pulaski fell, mortally wounded, at the head of his legion, when charging the enemy in their rear, in the full career of victory. The allies supported this desperate conflict fifty-five minutes, under a deadly fire from the enemy's batteries, and then made good their retreat, with the loss of six hundred and thirty-seven French, and two hundred and thirty-four continentals, killed and wounded.

The defence of the place was well conducted by General Prescott, and he certainly deserved the applause of his king and country.

In consideration of the bravery of Count Pulaski, the congress resolved that a monument be erected to his memory

The Count D'Estaing soon embarked, and seven ships were ordered for the Chesapeake, one of which only arrived at the place of destination, the fleet having been dispersed by a storm. The remainder steered for the West Indies.

As Sir Henry Clinton expected an attack on New-York by the French fleet, General Pigot was ordered to evacuate Rhode-Island, which order was accomplished, and the troops repaired to head-quarters at New-York.

Near the close of December, as the coast was still clear, Sir Henry planned an expedition to South Carolina. He embarked seven thousand five hundred troops, under convoy of Admiral Arbuthnot, and about the last of January, 1780, he appeared off Charleston. As one ordnance ship, and several transports, had been wrecked and lost on the passage, and several taken by the Americans, he was not prepared to effect a landing until February 11th, when he landed on the south side of John's Island, thirty miles from the city.

But this expedition had been foreseen by congress, and preparations were made to meet it. Three continental frigates were to sail for the port, and a trusty officer was despatched to the Havanna, in order to obtain ships and troops for the defence, promising, as a return, two thousand men to co-operate with the Spaniards in the reduction of St. Augustine.

To the force of seven or eight thousand men, General Lincoln could oppose but two thousand four hundred, near half of whom were militia : yet with them he hoped to defend the city. The continental frigates arrived, and, landing their crews, guns, and equipments, prepared to act on the defensive. The British admiral entered the harbour with all the ships which could pass the bar.

On the 10th of April, the town was summoned to surrender, which the commander refused. On the 12th, Sir Henry opened his batteries on the town, and his fire was promptly returned during eight successive days. On the 18th, a reinforcement arrived from New-York, of three thousand men, and Sir Henry approached within three hundred yards of the American lines. A council of war

was now called, by General Lincoln, of which the following was the result.

“A retreat would be attended with many distressing inconveniences, if not altogether impracticable, for the undermentioned causes.

1. The authority is averse to it, and would counteract the measure.

2. It must be performed in the face of a superior enemy, across a river three miles wide.

3. The passes are occupied by the enemy, which must be forced.

4. All these obstacles being overcome, the Santee must be crossed without boats, in the face of a pursuing enemy. We, therefore, advise to make immediate terms with the enemy.”

General Lincoln, however, determined to continue the defence; but, on the 26th, General Lincoln again summoned another council of war, and at the eventful moment, the flag of the enemy was seen to wave on the walls of Fort Moultrie. Sullivan's Island fell into the hands of the enemy on the 6th of May.

Sir Henry Clinton pushed his approaches, and on the 8th, he opened a correspondence with General Lincoln; renewed his summons, offered terms, &c. and threatened to renew hostilities at 8 o'clock. The eventful hour arrived, and awful, solemn silence ensued; neither party fired a gun; all was anxious suspense for an hour, yet neither party moved a proposition. At 9, the besieged opened a fire upon the enemy, who, in their turn, opened their batteries upon the town, which threatened to bury it in ruins. The town was repeatedly on fire, and many houses were burnt; at the same time, Sir Henry advanced his last parallel to the distance of twenty yards, and prepared for a general assault, by sea and land.

The critical moment had now arrived; the people, by their leaders, called on General Lincoln to renew the conference, and make terms with the enemy. The lieutenant-governor and council enforced the request. The militia threw down their arms, and all was submission.

General Lincoln renewed the conference with Sir Henry, and accepted his terms. Sir Henry complied, and the

next day the garrison, with all such as had borne arms, marched out, and became prisoners of war, May 12th.

The French consul, and the subjects of France and Spain, were, with their houses and effects, to be protected: but they themselves were to be considered prisoners of war.

At this time, Colonel Buford was advancing through the upper country, with a party of 300 Virginians, to the relief of Charleston. When Colonel Tarleton learnt the position of this party, he advanced with about 700 cavalry and mounted infantry, by a forced march of 105 miles, in fifty-four hours, and surprised them at the Waxhaws, and summoned the colonel to surrender. A parley ensued; and during the conference, Colonel Tarleton surrounded the party, and cut them to pieces, while begging for mercy. Thirty-seven only were made prisoners, and the remainder were either killed or wounded in the butchery. Lord Cornwallis highly applauded the act, and recommended Colonel Tarleton specially to the favour of his sovereign. With this blow, the state of South Carolina was subdued, and a regular British government was organized.

General Gates, then in Virginia, was appointed to succeed General Lincoln, in the southern command.

Georgia and South Carolina were now wholly subdued, and the enemy saw his way clear, to advance into North Carolina.

To counteract these movements of Tarleton, and keep up the spirits of the people, Generals Marion and Sumpter, at the head of their flying parties, kept up a system of predatory warfare, that greatly harassed and annoyed the enemy. So sharp and desperate were their attacks, that, in one instance, General Sumpter reduced the Prince of Wales' regiment, from the number of 278 to nine.

While the brave Sumpter was thus harassing the enemy, and animating the zeal of the inhabitants, a considerable force was traversing the middle states southward, for the relief of the British troops.

On the 6th of June, Generals Kniphausen, Robertson, Tryon and Sterling, crossed over from Staten Island into New-Jersey, at the head of 5000 regulars. On the 7th,

they advanced to Connecticut Farms, distant about five miles, in quest of the Rev. James Caldwell, whose patriotic zeal had rendered him peculiarly obnoxious; wantonly shot his wife in her own house, then burnt the house and meeting-house, with about a dozen other dwelling houses. The royal army next attempted to advance to Springfield, but were checked by Colonel Dayton, supported by General Maxwell, and they fled in disorder.

General Washington considered this movement as a feint in Sir Henry Clinton, to open the way for an attack upon West Point. He accordingly detached General Greene, at the head of a strong party, to watch the motions of the enemy. General Washington, learning from General Greene, that Springfield was their object of destination, sent forward a detachment to support General Greene.

The enemy advanced upon Springfield, at five in the morning of the 23d of June. General Greene disputed every pass valiantly, but obstinate bravery was constrained to yield to superior numbers; General Greene retired to the high grounds, and the enemy gained the town, which they destroyed.

The commander-in-chief, sensible of the worth and talents of General Greene, returned the thanks of himself and his suffering country, to him and the men under his command. But this skirmish was not to pass off so lightly. The militia rallied in considerable force, and drove the enemy to Staten Island, in a precipitate retreat.

The Marquis La Fayette, who had been to France on leave of absence, now returned to head quarters. He had negotiated for supplies from the French government, and an armament was soon to follow him. On the 10th of July, the armament arrived at Newport, Rhode Island, consisting of two ships of eighty guns, one of seventy-four, four of sixty-four, two frigates of forty, a cutter of twenty, an hospital ship, pierced for sixty-four, one bomb-ship, and thirty-two transports, under the command of the Chevalier de Ternay. Also, four old regiments of land forces, together with the legion of de Lauzern, and a battalion of artillery; in the whole, about 6000, under the command of Lieut. General Count de Rochambeau.

General Heath received the count at his landing, and put him and his troops in possession of the island, where they were handsomely accommodated. The General Assembly, then in session at Newport, by their special committee, presented the count with a complimentary address, to which the count replied, with assurances that a much greater force would soon follow him, and that his whole powers would be devoted to the service of the United States.

"The French troops," added the count, "are under the strictest discipline, and, acting under the orders of General Washington, will live with the Americans as brethren. I am highly sensible of the marks of respect shown me by the Assembly, and beg leave to assure them that, as brethren, not only my life, but the lives of the troops under my command, are devoted to their service."

The marquis witnessed these respectful attentions to his countrymen, and, in honour to our French allies, Washington directed, in his general orders, that black and white cockades should be worn as a compliment.

But the wants of the country were pressing, and Congress directed, that bills to the amount of twenty-five thousand pounds sterling should be drawn on Dr. Franklin, at the French court; and that bills to the same amount should be drawn on John Jay, minister at the court of Spain, and that the money should be immediately applied to the use of the troops.

After the fall of Charleston, Sir Henry committed the care of the southern states to Lord Cornwallis, at the head of four thousand men, and returned to New-York.

The arrival of the fleet under the Chevalier Ternay, at Rhode Island, gave Admiral Arbuthnot considerable alarm. His whole force amounted to but four ships of the line. But he was joined by Admiral Graves, with six line of battle ships, and felt himself secure from attack in New-York. With this reinforcement Sir Henry concerted an attack on the French fleet at Newport, and immediately embarked eight thousand troops. The fleet put into Huntington Bay, on Long Island. The country was alarmed, and the militia turned out in force. But General Washington made a diversion, by moving his

whole force down to Kingsbridge, and threatening New-York. The plan succeeded, and Sir Henry returned to New-York in haste.

In the south, Lord Cornwallis, having settled the government of South Carolina, prepared to subdue the rebellious spirit of the North Carolinians. This was seen by the Americans, and General Gates, with the shadow of an army, moved across Deep River, on the 27th of July, to watch the motions of the enemy. On the 6th of August, he was joined by General Caswell, at the head of a fine body of North Carolina militia, who were in good spirits, but under bad discipline; and he encamped at the Cross Roads, on his way to Camden. On the 13th he moved forward his army to Clermont, where he was joined by Brigadier-General Stevens, with about seven hundred Virginia militia. An express also arrived, informing him that Colonel Sumpter would join him at Camden with a detachment of South Carolina militia, and that an escort of clothing, ammunition, and stores, was on its way from Charleston to Camden, for the use of the garrison posted there.

General Gates immediately detached Lieutenant Colonel Woodford, at the head of the Maryland line, consisting of one hundred infantry, a company of artillery, with two brass field pieces, and about three hundred North Carolina militia, to join Colonel Sumpter, reduce the forts, and intercept the convoy. General Gates prepared to support Colonel Sumpter with his whole force; total about four thousand.

But Cornwallis had anticipated this movement, and entered Camden the day previous, and an attack was meditated on General Gates, in his camp at Clermont. Both generals put their armies in motion early in the evening of the 15th, and their advance parties met in the woods about two o'clock in the morning of the 16th; a conflict ensued, the Americans gave way in some disorder, but they soon recovered, and a skirmishing continued through the night.

When morning appeared, both generals made their dispositions to contest the field. An action commenced; the regular troops were firm, but the militia being over

powered by the British bayonets, gave way, and dispersed as they fled. The victory was complete, and the general and his regulars were abandoned to their fate. Several parties of militia, who were advancing to join the army, turned their arms against the fugitives, and thus completed the overthrow. The pursuit continued for more than twenty miles, and the road was strewn with the fragments of this routed army, together with the wounded, the dead, and the dying. A party of horse, supported by 200 infantry, at the distance of more than eighty miles from the scene of action, upon the first intelligence, abandoned their ground, and sought safety by flight.

The brave Baron de Kalb fell in this action, much and deservedly lamented. He was at the head of the Maryland troops, and second in command. Congress ordered that a monument should be raised to his memory at Annapolis.

The advantages of this victory were not great. The losses, and want of supplies, in a sickly season, compelled Cornwallis to return to Camden.

General Greene now arrived, and succeeded General Gates in the command of the southern army.

The country still continued to suffer by the ravages of Tarleton, who was detached, at the head of his cavalry, to dislodge General Morgan from his position at the Cowpens.

He commenced his operations with his usual impetuosity; traversed the country for several days, laying waste every thing in his course, until he arrived at Morgan's position, and commenced an action with the same impetuosity; the Americans were dislodged with some disorder, but they rallied to the charge, and were victorious in turn. Tarleton was defeated, his army routed, his artillery and baggage taken, and he, with the mounted fugitives, fled to Lord Cornwallis, January 7th, 1781.

This defeat roused his lordship; he commenced a pursuit, and the Americans retired. General Greene had the address to harass his lordship, and yet avoid a general action, until he arrived at Guilford, near the confines of Virginia, where he made a stand and gave him battle. General Greene, with his little army, had hopes of suc

cess against his lordship's pursuing forces, though greatly superior. The movements were well concerted, and well executed, and the conflict was sharp and bloody; but the militia gave way, the regulars were overpowered, and General Greene drew off his troops in good order, and took a strong position.

The severity of the action occasioned his lordship to make a retrograde movement to recover his losses.

Sir Henry had detached a fleet from New-York, with fifteen hundred troops on board, to co-operate with Cornwallis. The troops were landed in Chesapeake Bay, and committed the most alarming depredations. Ineffectual attempts were made to dislodge them. A movement was now made by General Greene towards South Carolina, which had become an enemy's country. He boldly advanced, and gave battle to Lord Rawdon, who was in the vicinity of Camden. A desperate contest ensued, and victory was doubtful. Both withdrew from the conflict, and left the field covered with the dead. Lord Rawdon retired to Camden, and strengthened his position.

General Greene advanced, and by a desperate assault, was on the point of carrying the strong fortress of Ninety Six, the reduction of which would have recovered all South Carolina, except Charleston.

At this critical moment, Lord Rawdon retired in person to Charleston; put himself at the head of 1700 fresh troops, then arrived from Ireland, and, by forced marches, advanced to the relief of Ninety Six. The approach of his lordship compelled General Greene to abandon the assault, when engaged hand to hand with the enemy, and when victory was ready to decide in his favour. The general drew off his army towards Camden in good order, and his lordship pursued; but General Greene eluded his lordship, by filing off towards Charleston, and taking a strong position upon the hills of Santee. Lord Rawdon retired to Charleston.

The war, during these operations in the south, raged in Virginia, under the command of General Phillips, through the month of April, and the ravages of the enemy exceeded all description. At Petersburg, they destroyed all the shipping, and about four hundred hogs-

heads of tobacco. At Osborn's Mills, they took two ships and ten smaller vessels, laden with cordage, flour, &c. Four ships and a number of smaller vessels were burnt or sunk, besides many others destroyed by the Americans, to prevent their falling into the hands of the enemy, together with about three thousand hogsheads of tobacco, April 27. On the 30th, they penetrated to Manchester, destroyed 1200 hogsheads more, thence they proceeded to Warwick, and laid waste the shipping, both in the river and on the stocks; also, extensive rope walks, tanneries, warehouses, and magazines of flour, mills, &c. in one general conflagration, and then embarked on board their shipping.

The Baron Steuben opposed this party, but his force was insufficient to make any serious impressions. The Marquis La Fayette was detached with troops to succour the town; but such was the state of the military funds, that when he arrived at Baltimore, he was obliged to borrow two thousand guineas, *on his own responsibility*, to enable him to proceed. On the strength of this, he advanced to Richmond, where he joined the baron, with the Virginia militia, and covered Richmond. Here he watched the movements of the enemy, though too weak to check all their operations. On the 9th of May, General Phillips entered Petersburg, where he died on the 13th.

Of the sufferings of the southern army we may form some estimate, by reading an extract of a letter from General Greene to the marquis:

“You may depend upon it, that nothing can equal the sufferings of our little army, but their merits. Let not the love of fame get the better of your prudence, and plunge you into a misfortune, in too eager a pursuit after glory. This is the voice of a friend, not of a general.”

Lord Cornwallis had advanced from Guilford to Wilmington, and left General Greene in the rear. From Wilmington he advanced to join General Phillips, in Petersburg. The general was dead, but he found eighteen hundred troops, and, being thus reinforced, he advanced towards Richmond, in order to dislodge the marquis. Flushed by recent triumphs, in a letter to Sir Henry, he thus wrote, “the boy cannot escape me.” The marquis did escape, however, and evacuated the place on the 27th.

Capture of Andre, the British Spy, at Tarrytown, by three Militia-men, 21st of September, 1780.—Page 219.

General Wayne's Victory over the Indians, on the banks of the Miami, in 1794.—Page 245.

On the 7th of June, General Wayne joined the marquis with eight hundred of the Pennsylvania militia. While on the march, however, supposing the main army of Cornwallis had crossed the River James, he attacked what he supposed to be the rear guard, when, to his surprise, he found the general at the head of the army ready to receive him. Finding no time was to be lost, he advanced to the charge at the head of his column in gallant style. The conflict was sharp, and, availing himself of his first impression, he hastily withdrew, leaving the general as much astonished as he found him. He retreated in good order, without pursuit, as Cornwallis probably concluded that it was an ambuscade. His lordship retired in the night, and marched to Portsmouth.

CHAPTER XI.

Treason of Arnold—Major Andre taken.

Immediately after the fall of Charleston, in May, Sir Henry Clinton returned to New-York to commence the operations of the season.

About the middle of September, 1780, General Washington retired from head-quarters (near New-York) with his suite, General Knox, and the Marquis La Fayette, to meet Admiral Ternay, and Count Rochambeau, at Hartford, (Connecticut,) agreeable to appointment; and about the 21st, the parties met accordingly. The avowed object of their conference was to concert measures for the reduction of New-York.

In the midst of this conference, an express arrived from West Point, on the Hudson, announcing the traitorous designs of General Arnold. The council was immediately closed; the parties retired, and General Washington went to the relief of West Point. On his arrival, he found the fortress dismantled, the cannon dismounted, and that Arnold had fled, and taken refuge on board the British sloop of war Vulture, then lying in the river.

Whilst his excellency was employed in repairing the

fortress, a prisoner was announced, who proved to be the unfortunate Major Andre, who had volunteered his services to Sir Henry Clinton, to negotiate the treacherous design. His character was that of a spy; his fate was death! Let us pass over this distressing scene. The righteous sacrifice greatly interested the feelings, and touched the sympathy of every American breast.

The feelings of General Washington upon this eventful occasion, may be seen in the following extract from his private correspondence of October 13th:

“In no instance since the commencement of the war has the interposition of Divine Providence appeared more remarkably conspicuous, than in the rescue of the fort and garrison at West Point. Andre has met his fate, and with that fortitude that was to have been expected from an accomplished man, and a gallant officer; *but I am mistaken if Arnold is not undergoing, at this time, the torments of a mental hell.*”

In the month of October, 1780, Sir Henry Clinton detached General Arnold on a marauding expedition, into Virginia, with about 1600 men, and a number of armed vessels; he laid waste the country upon James River, in several predatory excursions, until his progress was arrested by the appearance of the French squadron from Newport. This fleet put an end to the ravages of Arnold, by capturing and destroying a very considerable part of his fleet; and would have caused the destruction of the traitor, had not a British fleet appeared from New-York, for the relief of Arnold, and by a naval engagement off the capes of Virginia, with the French fleet, afforded him an opportunity to escape to New-York. The French returned to Newport.

On the 18th of December, the Chevalier Charles Louis de Ternay, Knight of St. John of Jerusalem, late governor of the Isles of France and Bourbon, and commander of the French squadron in the American seas, died in Newport, and was interred in Trinity church-yard the next day, with military honours.

The frequent changes in the army, owing to short enlistments; the want of pay, clothing, provisions, &c had repeatedly distressed the army, and were at last ac

accompanied with the revolt of the Pennsylvania line, excepting three regiments. In defiance of all the efforts of General Wayne and all the other officers, they seized on six field pieces, and took up their march for Princeton, January, 1781.

Sir Henry Clinton, upon the first intelligence, made some important movements from Staten Island, and sent spies at the same time, to countenance and encourage the revolvers. A committee from congress visited the mutineers at Princeton, with liberal assurances, to persuade them to return to their duty ; but General Washington sent a strong force, and compelled them to return. A general arrangement was soon made to supply the armies, both with foreign and domestic aid and resources.

On the 14th of May, information was given to Washington, that Colonel Greene, with his whole detachment, had been cut off by Delancy's troops, near Croton river, about forty miles north of New-York. Colonel Greene had been wounded and captured, and was afterwards murdered, and Major Flagg was killed in his quarters.

About this period, General Washington wrote to the governors of the northern states :

"On the calculations I have been able to form in concert with the most experienced French and American officers, the operations in view, will require, in addition to the French army, all the continental battalions from New-Hampshire to New-Jersey, to be completed." He afterwards added, "As we cannot count upon their being full, and as a body of militia will also be necessary, I have called upon several states to hold certain numbers in readiness, to move within one week of the time I may require them."

These despatches were intercepted, and gave considerable alarm to Sir Henry, who renewed his exertions for the defence of the city.

On the 14th of June, a junction was effected before New-York, between General Washington, and a body of fifteen hundred French troops lately arrived in Boston.

On the 21st, General Washington wrote to the French admiral at Newport, as follows: "I hope there will be no occasion for a movement to the southward for the

want of force to act against New-York, as I flattered myself that the glory of destroying the British squadron at New-York, is reserved for the king's fleet under your command, and that of the land forces, at the same place, for the allied armies."

On the evening of the 18th, precisely at eight o'clock, the allied armies commenced a grand movement, and marched from their encampments down to New-York and at four the next morning, they were drawn up in order of battle, while General Washington and Count Rochambeau, with all the general officers and engineers, reconnoitered the enemy's works throughout their whole line. The next day they renewed their reconnoitering, and, in the afternoon, drew off their troops and returned to their encampments.

These movements, together with the removal of the heavy cannon and mortars, left at Boston in 1776, across the country to North River, and down to the army before New-York; as well as the intercepted correspondence, confirmed Sir Henry Clinton in his fears, and led him to withdraw a very considerable force from Lord Cornwallis, for the defence of New-York.

At this eventful moment, Count de Grasse announced his arrival in the Chesapeake bay, with a fleet of twenty-four ships of the line, frigates, &c. The allied commanders forwarded assurances that they would put their troops in immediate motion, to co-operate with him.

Count de Grasse landed 3,300 troops, under the command of the Marquis de St. Simon, to reinforce the Marquis la Fayette.

Monsieur de Barras, at the same time, sailed from Newport with the French squadron, to join Count de Grasse.

General Washington committed the command of the forces before New-York to General Heath, and put himself at the head of the allied armies, and by a rapid movement, marched to Philadelphia, and thence to the head of the River Elk.

Sir Henry Clinton, in the mean time, despatched Admiral Graves in quest of Count de Grasse. On the 5th of September, he discovered the French fleet in Lynnhaven

Bay. At sight of the English fleet, Count de Grasse slipped his cables, and put to sea, and at 4 o'clock an action commenced. The French were victorious, and regained the bay; but the English retired to New-York to repair.

At this eventful moment, De Barras entered the bay and joined De Grasse, who sent up their transports to convey the allied armies down the bay. The allied commanders, at the same time, held an interview with the Count de Grasse, on board the *Ville de Paris*, to settle the plan of operations.

The allied armies, amounting to twelve thousand men, formed a junction with the Marquis, while Lord Cornwallis fortified himself at Yorktown, in Virginia. The militia of Virginia took the field under Governor Nelson, and the movement seemed to portend some important results.

On the 27th of September, General Washington issued the following orders. "If the enemy should be tempted to meet the army on its march, the general particularly enjoins it upon the troops to place their principal reliance upon the bayonet, that they may prove the vanity of that boast which the British make, of their peculiar prowess in deciding battles with that weapon."

The next morning, the whole army encamped about a mile from Yorktown, and lay on their arms through the next night. At the earnest solicitations of the commander in chief and the marquis, Count de Grasse moved with his fleet up to the mouth of York River, and closely invested Cornwallis.

On the 6th of October, the trenches of the allies were opened upon his lordship, at the distance of 600 yards. On the 9th, the American line began to play upon Yorktown, with twenty-four eighteen and ten inch mortars, which continued through the night. The next morning the French opened a destructive fire from their batteries, without intermission, for about eight hours; and on the succeeding night, a terrible fire was kept up from the whole line, without intermission, until morning. The horrors of this scene were greatly heightened by the conflagration of two British ships, set on fire by the shells of the allies, and consumed in the night. The next morn-

ing, October 11th, the allies opened their second parallel, at the distance of two hundred yards, and another British ship was consumed by t' eir shells.

On the 14th, General Washington ordered two battalions to advance to the second parallel, and begin a large battery in the centre, and in advance. The enemy met this movement with an incessant fire from two redoubts, in advance of their works, as well as from their whole line, that continued through the night.

General Washington detached the Marquis La Fayette in the morning, at the head of the American light infantry, supported by the Baron Viominel, from the line of the French, to advance and storm these redoubts, which had so annoyed them through the night. Lieut. Col. Hamilton commanded the van of the corps of the Marquis La Fayette. The redoubt was promptly carried by La Fayette, at the point of the bayonet, but the captives were spared. The Marquis sent his aid, Major Barbour, through the whole line of the enemy's fire, to notify the Baron Viominel of his success, and inquire where he was, to which the Baron replied, "I am not in my redoubt, but shall be in five minutes;" in five minutes his redoubt was carried.

General Washington was highly gratified with the success of this exploit, and commended the officers and soldiers engaged in it, in the highest terms, in the following general orders :

"The Marquis La Fayette's division will mount the trenches to-morrow. The commander in chief congratulates the allied army on the success of the enterprise, last evening, against the two important redoubts on the left of the enemy's works. He requests the Baron Viominel, who commanded the French grenadiers, and the Marquis La Fayette, who commanded the American light infantry, to accept his warmest acknowledgments for the excellence of their dispositions, and for their own gallant conduct on the occasion. And he begs them to present his thanks to every individual officer, and to the men of their respective commands, for the spirit and rapidity with which they advanced to the points of attack assigned them, and for the admirable firmness with which they

Surrender of Burgoyne.—Page 225.

Tomb of Washington.—Page 249.

supported them, under the fire of the enemy, without returning a shot. The general reflects, with the highest pleasure, on the confidence which the troops of the two nations must hereafter have in each other; assured of mutual support, he is convinced there is no danger which they will not cheerfully encounter, no difficulty which they will not bravely overcome."

On the morning of the 16th, his lordship detached Lieutenant Colonel Abercrombie, at the head of four hundred men, upon a sortie, to destroy two batteries the allies had erected in the night; the enterprise succeeded, and he spiked the cannon. The French suffered severely in the defence of these works; but the British gained no permanent advantage. On the afternoon of the same day, the allies opened their batteries, covered with about one hundred pieces of heavy cannon, and such was their destructive fire, that the British lines were soon demolished and silenced. Alarmed for his safety, his lordship now began to prepare to retire; his boats were collected, and a part of his army was embarked across to Gloucester Point, opposite to Yorktown, then under the command of Lieutenant Colonel Tarleton; but a violent storm suddenly arose, which defeated the plan, and it was with the greatest difficulty that his lordship could recover his boats, and restore the division.

His lordship now seeing that all hope of succour or escape was vain, and that there was no alternative, to avoid the tremendous fire of the allies, but submission, requested a parley on the 18th, for twenty-four hours, and that commissioners might be appointed to arrange articles of capitulation. General Washington consented, and commissioners were appointed accordingly.* On the 19th the articles were signed, and his lordship, with the whole British army, marched out, *prisoners of war*. The ships were the conquest of France. The same terms were prescribed by the commissioners to Lord Cornwallis, that had been prescribed to General Lincoln at Charles-

* The commissioners on the part of the allies were the Viscount de Noailles, and Lieutenant Colonel Laurens, whose father had been sent out by congress, as minister to the court of Versailles, and who was captured on his passage by the British, and confined in the tower of London, where he then remained in close confinement.

ton, just eighteen months before; he was refused the honours of war, and General Lincoln was deputed to receive the sword of his lordship. Thus the mission of the Marquis La Fayette to France, in the winter of 1779—1780, was consummated by the fall of the hero of the south, at Yorktown.

The noble generosity of the French officers to those of the British, after the capitulation, called forth the following acknowledgment of his lordship:

“The deliberate sensibility of the officers of his most christian majesty towards our situation, their generous and pressing offers of money, both public and private, to any amount, has really gone beyond what I can possibly describe.”

Lord Cornwallis pressed hard for permission to embark the British and German troops to Europe, under suitable engagements, not to serve during the war; also, that the tories might be protected; but both were refused. His lordship was, however, indulged with the permission, that the Bonetta sloop of war might pass unsearched; and many of the most obnoxious tories escaped from the rage of their injured and insulted countrymen.

Seven thousand troops under the command of Earl Cornwallis, with 1500 seamen, were the subjects of this convention; together with one frigate of twenty-four guns, besides transports, (twenty of which had been sunk or otherwise destroyed,) seventy-five brass, and sixty-nine iron ordnance, howitzers and mortars. Also a military chest containing 2,113*l.* 6*s.* sterling, which, trifling as it was, could not fail to be acceptable to the army.

His excellency, General Washington, closed this glorious scene at Yorktown, by publishing to the army, both officers and soldiers, in general orders, the grateful effusions of his heart, and ordered the whole to be assembled in divisions and brigades, to attend to divine service, and *render thanks to that God who had given them the victory.*

Congress received the letter of General Washington on the 24th, announcing the capture of the British army, with the most cordial satisfaction, and immediately resolved to move in procession at 2 o'clock, to the Lutheran church, and return thanks to Almighty God, for

crowning with success the allied arms of America and France. Congress next resolved, that a proclamation be issued for the religious observance of the 13th of December, then next, as a day of public thanksgiving and prayer, throughout the United States.

Thus joy, gratitude, and praise to God were united, and became universal, and swelled with transports every patriotic breast, throughout United America.

Congress resolved on the 29th, "That thanks be presented to General Washington, Count de Rochambeau, Count de Grasse, and the officers of the different corps, and the men under their command, for their services, in the reduction of Lord Cornwallis."

They next resolved, "That a marble column be erected at Yorktown, adorned with emblems commemorative of the alliance between the United States and his most Christian Majesty, and inscribed with a succinct account of the surrender of the British army."

Congress next resolved, "That two stands of colours be presented to General Washington, and two pieces of ordnance be by him presented to Count de Rochambeau, as trophies of their illustrious victory; and that the Chevalier de la Luzerne, be requested to inform his most Christian Majesty, that it was the wish of Congress that Count de Grasse might be permitted to accept the same testimonials with the Count de Rochambeau.

General Rochambeau, with his army, took up his winter quarters in Virginia; but the troops under the command of the Marquis de St. Simon were embarked for the West Indies, and the American troops returned to their former stations, excepting such cavalry and infantry as were necessary to the service of General Greene; these were sent forward in November, under the command of General St. Clair, to co-operate in the southern war.

The French fleet, under the Count de Grasse, sailed at the same time for the West Indies, and the operations of the season were generally closed.

His excellency, General Washington, retired to Philadelphia, to give repose to his mind, as well as to confer with Congress upon the future exigencies of the nation.

One universal expression of gratitude and applause

burst forth from all parts of the country, to the allied heroes who fought under Washington, and triumphed over Britain. Ministers at the altar, of all denominations, caught the sacred flame, and the temples of Almighty God resounded with gratitude and praise to his great name throughout United America.

This signal and decisive victory over Cornwallis, blasted the hope of the British government as regarded the subjection of the revolted colonies to their former allegiance. During nearly three months after the 12th of December, 1781, motions were frequently made in parliament for closing hostile operations against this country. On the 4th of March, 1782, the commons resolved, "That the house would consider as enemies to his majesty and to the country, all those who should advise or attempt the further prosecution of offensive war on the continent of North America." As one earnest of the sincerity of this resolution, the command of the British forces was taken from Sir Henry Clinton, and given to Sir Guy Carleton, who was directed to advance the wishes of the British government, for an accommodation with the United States.

Agreeable to his instructions, Sir Guy proposed a correspondence with congress, and solicited of the commander in chief, a passport for his secretary. This was however refused, as the United States had stipulated not to negotiate without the consent of the French government.

As soon as information of the capture of Cornwallis was received at the French court, the government proposed to congress the immediate appointment of commissioners to treat of peace. John Adams, Benjamin Franklin, John Jay, and Henry Laurens, were accordingly chosen. These were met by Mr. Fitzherbert, and Mr. Oswald, at Paris, on the part of Great Britain. Provisional articles were signed on the 30th of November 1782, and the definitive treaty was concluded in September following.

On the 18th of April, General Washington announced the cessation of hostilities between the two countries, and the following general orders:

“The Commander in Chief orders the cessation of hostilities, between the United States of America and the King of Great Britain, to be publicly proclaimed to-morrow at twelve o’clock, at the New Building; and the proclamation which will be communicated herewith, be read to-morrow evening, at the head of every regiment and corps of the army; after which, the chaplains, with the several brigades, will render thanks to Almighty God for all his mercies, particularly for his overruling the wrath of man to his own glory, and causing the rage of war to cease among the nations.

“The Commander in Chief, far from endeavouring to stifle the feeling of joy in his own bosom, offers his most cordial congratulations on the occasion, to all the officers of every denomination—to all the troops of the United States in general, and in particular to those gallant and persevering men, who had resolved to defend the rights of their invaded country so long as the war should continue; for these are the men who ought to be considered as the pride and boast of the American army, and who, crowned with well-earned laurels, may soon withdraw from the field of glory, to the more tranquil walks of civil life.

“While the General recollects the almost infinite variety of scenes through which we have passed with a mixture of pleasure, astonishment, and gratitude—while he contemplates the prospects before us with rapture,—he cannot help wishing that all the brave men, of whatever condition they may be, who have shared in the toils and dangers of effecting this glorious revolution, of rescuing millions from the hand of oppression, and of laying the foundation of a great empire, might be impressed with a proper idea of the dignified part they have been called to act, under the smiles of Providence, on the stage of human affairs; for happy, thrice happy, shall they be pronounced hereafter, who have contributed any thing, who have performed the meanest office in erecting this stupendous fabric of Freedom and Empire, on the broad basis of independency; who have assisted in protecting the rights of human nature, and establishing an asylum for the poor and oppressed of all nations and religions

“The glorious task for which we first flew to arms, being thus accomplished, the liberties of our country being fully acknowledged and firmly secured, by the smiles of Heaven on the purity of our cause, and the honest exertions of a feeble people, determined to be free, against a powerful nation disposed to oppress them; and the character of those who have persevered through every extremity of hardship, suffering, and danger, being immortalized by the illustrious appellation of the *Patriot Army*,—nothing now remains but for the actors of this mighty scene to preserve a perfect, unvarying consistency of character through the very last act; to close the drama with applause; and to retire from the military theatre with the same approbation of angels and men, which have crowned all their former virtuous actions.

“For this purpose, no disorder or licentiousness must be tolerated; every considerate and well disposed soldier must remember it will be absolutely necessary to wait with patience, till peace shall be declared, or congress shall be enabled to take proper measures for the security of the public stores, &c. So soon as these arrangements shall be made, the general is confident there will be no delay in discharging, with every mark of distinction and honour, all the men enlisted for the war, who will then have faithfully performed their engagements with the public. The general has already interested himself in their behalf, and he thinks he need not repeat the assurances of his disposition to be useful to them on the present, and every other proper occasion. In the mean time, he is determined that no military neglects or excesses shall go unpunished, while he retains the command of the army.

“The adjutant-general will have such working parties detailed to assist in making the preparation for a general rejoicing, as the chief engineer, with the army, shall call for, and the quarter-master-general will also furnish such materials as he may want. The quarter-master-general will, without delay, procure such a number of discharges to be printed as will be sufficient for all the men enlisted for the war; he will please to apply at head-quarters for the form. An extra ration of liquor to be issued to *every*

man to-morrow, to drink perpetual peace, independence, and happiness, to the United States of America."

It is not a little remarkable, that these general orders of the commander-in-chief were read to the army, just eight years from the battle of Lexington. The farewell orders of the general were issued to the army on the 2d of November, from which the following is a selection.

"A contemplation of the complete attainment, at a period earlier than could have been expected, of the object for which we contended, against so formidable a power, cannot but inspire us with astonishment and gratitude. The disadvantageous circumstances on our part, under which the war was undertaken, can never be forgotten. The signal interpositions of Providence, in our feeble condition, were such as could scarcely escape the attention of the most unobserving, while the unparalleled perseverance of the armies of the United States, through almost every possible suffering and discouragement, for the space of eight long years, was little short of a standing miracle." His closing words are, "and being now to conclude these his last public orders, to take his ultimate leave, in a short time, of the military character, and to bid adieu to the armies he has so long had the honour to command, he can only again offer in their behalf his recommendations to their grateful country, and his prayers to the God of armies. May ample justice be done them here, and may the choicest of Heaven's favours, both here and hereafter, attend those who, under the divine auspices, have secured innumerable blessings for others! With these wishes, and this benediction, the Commander in Chief is about to retire from service. The curtain of separation will soon be drawn, and the military scene to him will be for ever closed."

The army was now disbanded by the proclamation of congress, of which Dr. Thatcher gives the following sketch, with the parting scene between General Washington and his officers.

"Painful, indeed, was the parting scene; no description can be adequate to the tragic exhibition. Both officers and soldiers, long unaccustomed to the affairs of private life, turned loose on the world to starve, and to be-

come a prey to vulture speculators. Never can that melancholy day be forgotten, when friends, companions for seven long years in joy and in sorrow, were torn asunder, without the hope of ever meeting again, and with prospects of a miserable subsistence in future.

“ Among other incidents peculiarly affecting on this occasion, were the lamentations of women and children, earnestly entreating that those with whom they had been connected in the character of husband and father, would not withdraw from them the hand of kindness and protection, and leave them in despair: but, in several instances, the reply was, ‘ no, we took you as *companions during the war*, and now we are destitute of the means of support, and you must provide for yourselves.’

“ *November 25th.*—The British army evacuated New York, and the American troops under General Knox took possession of the city. Soon after, General Washington, and Governor Clinton, with their suite, made their public entry into the city on horseback, followed by the lieutenant governor, and the members of council, for the temporary government of the southern district, four abreast. General Knox, and the officers of the army, eight abreast; citizens on horseback, eight abreast—the speaker of the assembly, and the citizens on foot, eight abreast. The governor gave a public dinner, at which the commander in chief, and other general officers, were present. The arrangements for the whole business were so well made and executed, that the most admirable tranquillity succeeded through the day and night. On Monday the government gave an elegant entertainment to the French ambassador, the Chevalier de la Luzerne; General Washington, the principal officers of New-York state, and of the army, and upwards of a hundred gentlemen, were present. Magnificent fireworks, infinitely exceeding every thing of the kind before seen in the United States, were exhibited at the Bowling Green in Broadway, on the evening of Tuesday, in celebration of the definitive treaty of peace. They commenced by a dove descending with the *olive branch*, and setting fire to a marron battery.

On Tuesday noon, December 4th, the principal officers

of the army assembled at Francis' tavern, to take a final leave of their much loved commander in chief. Soon after his excellency entered the room. His emotions were too strong to be concealed. Filling a glass, he turned to them and said, 'With a heart full of love and gratitude, I now take leave of you. I most devoutly wish that your latter days may be as prosperous and happy as your former ones have been glorious and honourable.' Having drank, he added, 'I cannot come to each of you to take my leave, but shall be obliged to you, if each of you will come and take me by the hand.' General Knox being nearest, turned to him. Incapable of utterance, Washington, *in tears*, grasped his hand, embraced and kissed him. In the same affectionate manner he took leave of each succeeding officer. In every eye was the tear of dignified sensibility, and not a word was articulated to interrupt the eloquent silence and tenderness of the scene.

Leaving the room, he passed through the corps of light infantry, and walked to White Hall, where a barge waited to convey him to Paulus' Hook. The whole company followed in mute and solemn procession, with dejected countenances, testifying feelings of delicious melancholy, which no language can describe. Having entered the barge, he turned to the company, and, waving his hat, bade them a silent adieu. They paid him the same affectionate compliment, and, after the barge had left them, returned in the same solemn manner to the place where they had assembled. The passions of human nature were never more tenderly agitated than in this interesting and distressful scene."

Congress was now in session at Annapolis, to whom, on the 23d of December, the commander in chief resigned his commission. "The governor, council, and legislature of Maryland, several general officers, the Consul General of France, and numerous citizens of Annapolis were present. Congress were seated, and covered, as representatives of the sovereignty of the union; the spectators were uncovered, and standing. The general was introduced to a chair by the secretary, who, after a decent interval, ordered silence. A short pause ensued

when the honourable Thomas Mifflin, the president, informed the general, that "the United States, in congress assembled, were prepared to receive his communications." On which he rose, with dignity, and delivered this address :

"Mr. President—The great events on which my resignation depended, having at length taken place, I now have the honour of offering my sincere congratulation to congress, and of presenting myself before them, to surrender into their hands the trust committed to me, and to claim the indulgence of retiring from the service of my country.

"Happy in the confirmation of our independence and sovereignty, and pleased with the opportunity afforded the United States, of becoming a respectable nation, I resign with satisfaction the appointment I accepted with diffidence; a diffidence in my abilities to accomplish so arduous a task, which, however, was superseded by a confidence in the rectitude of our cause, the support of the supreme power of the union, and the patronage of Heaven.

"The successful termination of the war has verified the most sanguine expectations,—my gratitude for the interpositions of Providence, and the assistance I have received from my countrymen, increase with every review of the momentous contest.

"While I respect my obligations to the army in general, I should do injustice to my own feelings, not to acknowledge in this place, the peculiar services and distinguished merits of the persons who have been attached to my person during the war. It was impossible the choice of confidential officers, to compose my family, should have been more fortunate. Permit me, Sir, to recommend in particular, those who have continued in the services to the present moment, as worthy of the favourable notice and patronage of congress. I consider it as an indispensable duty to close this last solemn act of my official life, by commending the interests of our country, to the protection of Almighty God, and those who have the superintendence of them to his holy keeping.

"Having now finished the work assigned me, I retire from the great theatre of action; and bidding an affec-

tionate farewell to this august body, under whose orders I have long acted, I here offer my commission, and take my leave of all the employments of public life."

When accepting his commission, congress, through their president, expressed in glowing language to Washington, their high sense of his wisdom and energy, in conducting the war to so happy a termination, and invoking the choicest blessings upon his future life.

President Mifflin concluded as follows: "We join you in commending the interest of our country to the protection of Almighty God, beseeching Him to dispose the hearts and minds of its citizens to improve the opportunity afforded them of becoming a happy nation. And our prayers for you, sir, that your days may be happy, and He will finally give you that reward which this world cannot give."

CHAPTER XIII.

Of the Confederation. Formation and adoption of the present Constitution of the United States.

ON the 12th of July, 1777, articles of confederation and perpetual union were drawn up by congress, and ratified by twelve of the states in the December following. This instrument was so imperfect as to be termed by some "a rope of sand." Brittle as it was, however, it carried the people through a perilous war, and what it lacked in energy, was supplied by the spirit of the times. But when the olive branch of peace succeeded to the clarion of war and the din of arms—when private interest took precedence of public spirit, and intrigue usurped the place of national virtue, the wants of the country called for a more energetic compact, and the cause of republican America required a more efficient safeguard.

To effect this object, a convention was proposed, which held its session in Philadelphia. In this august body General Washington had a seat, and was chosen president. On the 17th of September, 1787, the finishing hand was

put to the Constitution, which was submitted to the different states, and ratified, at first, but by eleven, North Carolina and Rhode Island refusing their assent. The former assented to it in 1789, and the latter in 1790.

In 1789, General George Washington was elected first president of the United States.

It was with great reluctance that he accepted this office. His feelings, as he said himself, were like those of a culprit, going to the place of execution. But the voice of a whole continent, the pressing recommendation of his particular friends, and the apprehension that he should otherwise be considered as unwilling to hazard his reputation in executing a system which he had assisted in forming, determined him to accept the appointment. In April he left Mount Vernon to proceed to New-York, and to enter on the duties of his high office. He every where received testimonies of respect and love. At Trenton, the gentler sex rewarded him for his successful enterprise, and the protection which he afforded them twelve years before. On the bridge over the creek, which passes through the town, was erected a triumphal arch, ornamented with laurels and flowers, and supported by thirteen pillars, each encircled with wreaths of evergreen. On the front of the arch was inscribed, in large gilt letters,

THE DEFENDER OF THE MOTHER WILL BE THE PRO-
TECTOR OF THE DAUGHTERS.

At this place he was met by a party of matrons, leading their daughters, who were dressed in white, and who, with baskets of flowers in their hands, sung, with exquisite sweetness, the following ode, written for the occasion :—

Welcome, mighty chief, once more
Welcome to this grateful shore;
Now no mercenary foe
Aims again the fatal blow,
Aims at THEE the fatal blow.

Virgins fair and matrons grave,
Those thy conq'ring arms did save.

GILBERT & GIBSON

The Surrender of Cornwallis.

Build for thee triumphal bowers;
Strew, ye fair, his way with flowers,
Strew your HERO'S way with flowers.

At the last line, the flowers were strewed before him. After receiving such proofs of affectionate attachment, he arrived at New-York, and was inaugurated first President of the United States, on the thirtieth of April. In making the necessary arrangements of his household, he publicly announced, that neither visits of business nor of ceremony would be expected on Sunday, as he wished to reserve that day sacredly to himself.

In an impressive address to both houses of Congress, he declared, with characteristic modesty, his "incapacity for the mighty and untried cares before him," and offered his "fervent supplications to that Almighty Being whose providential aid can supply every human defect, that his benediction would consecrate to the liberties and happiness of the people of the United States, a government instituted by themselves for these essential purposes; and would enable every instrument, employed in its administration, to execute, with success, the functions allotted to his charge."

At the close of the revolution, the people anticipated independence and peace; but they were somewhat disappointed; debts, contracted during the war, bore heavily upon the people.

To remedy these evils, Congress applied to the states for a grant of the power to regulate commerce, and to collect a revenue from it. New-York alone refused; but as unanimity was requisite, her single negative defeated the project. In the mean time the distress increased, and in Massachusetts, where it was the greatest, urged to insurrection a portion of the inhabitants. Near the close of the year 1786, they assembled to the number of two thousand, in the northwestern part of the state; and choosing Daniel Shays for their leader, demanded that the collection of debts should be suspended, and that the legislature should authorise the emission of paper money for general circulation.

Two bodies of militia, drawn from those parts of the state where disaffection did not prevail, were immediately

despatched against them, one under the command of General Lincoln, and the other of General Shepherd. They were easily dispersed; and afterwards abandoning their seditious purposes, accepted the proffered indemnity of the government.

It was a question whether the general government should be supported or abandoned, or whether the object of the revolution should be realized or lost.

In May, 1787, commissioners were appointed and assembled at Philadelphia; George Washington was unanimously elected president. They deliberated with closed doors, and happily it was agreed to sacrifice local interest on the altar of public good.

An abstract of this constitution, with its several subsequent amendments, follows: it is extracted from Mr. Webster's Elements of Useful Knowledge.

Of the Legislature. "The legislative power of the United States is vested in a congress, consisting of two houses or branches, a senate, and a house of representatives. The members of the house of representatives are chosen once in two years, by the persons who are qualified to vote for members of the most numerous branches of the legislature, in each state. To be entitled to a seat in this house, a person must have attained to the age of twenty-five years, been a citizen of the United States for seven years, and be an inhabitant of the state in which he is chosen.

Of the Senate. "The senate consists of two senators from each state, chosen by the legislature for six years. The senate is divided into three classes, the seat of one of which is vacated every second year. If a vacancy happens during the recess of the legislature, the executive of the state makes a temporary appointment of a senator until the next meeting of the legislature. A senator must have attained to the age of thirty years, been a citizen of the United States nine years, and be an inhabitant of the state for which he is chosen.

Of the powers of the two Houses. "The house of representatives choose their own speaker, and other officers, and have the exclusive power of impeaching public officers, and originating bills for raising a revenue. The

vice-president of the United States is president of the senate; but the other officers are chosen by the senate. The senate tries all impeachments; each house determines the validity of the elections and qualifications of its own members, forms its own rules, and keeps a journal of its proceedings. The members are privileged from arrest, while attending on the session, going to, or returning from the same, except for treason, felony, or breach of the peace.

Of the powers of Congress. “The congress of the United States have power to make and enforce all laws, which are necessary for the general welfare—as to lay and collect taxes, imposts, and excises; borrow money, regulate commerce, establish uniform rules of naturalization, coin money, establish post roads and post offices, promote the arts and sciences, institute tribunals inferior to the Supreme Court, define and punish piracy, declare war and make reprisals, raise and support armies, provide a navy, regulate the militia, and to make all laws necessary to carry these powers into effect.

Of Restrictions. “No bill of attainder, or retrospective law, shall be passed; the writ of habeas corpus cannot be suspended except in cases of rebellion or invasion; no direct tax can be laid, except according to a census of the inhabitants; no duty can be laid on exports; no money can be drawn from the treasury, unless appropriated by law; no title of nobility can be granted, nor can any public officer, without the consent of congress, accept of any present or title from any foreign prince or state. The states are restrained from emitting bills of credit, from making any thing but gold or silver a tender for debts, and from passing any law impairing private contracts.

Of the Executive. “The executive power of the United States is vested in a president, who holds his office for four years. To qualify a man for president, he must have been a citizen at the adoption of the constitution, or must be a native of the United States; he must have attained to the age of thirty-five years, and been fourteen years a resident within the United States. The president and vice-president are chosen by electors designated in such a

manner as the legislature of each state shall direct. The numbers of electors, in each state, is equal to the whole number of senators and representatives.

Of the powers of the President. “The president of the United States is commander in chief of the army and navy, and of the militia, when in actual service. He grants reprieves and pardons; nominates, and, with the consent of the senate, appoints ambassadors, judges, and other officers; and, with the advice and consent of the senate, forms treaties, provided two thirds of the senate agree. He fills vacancies in offices which happen during the recess of the senate. He convenes the congress on extraordinary occasions, receives foreign ministers, gives information to Congress of the state of public affairs, and, in general, takes care that the laws be faithfully executed.

Of the Judiciary. “The judiciary of the United States consists of one supreme court, and such inferior courts as the Congress shall ordain. The judges are to hold their offices during good behaviour, and their salaries cannot be diminished during their continuance in office. The judicial power of these courts extends to all cases in law and equity, arising under the constitution or laws of the United States, and under treaties; to cases of public ministers and consuls; to all cases of admiralty and maritime jurisdiction; to controversies between the states, and in which the United States are a party; between citizens of different states; between a state and a citizen of another state, and between citizens of the same state claiming under grants of different states; and to causes between one of the states or an American citizen, and a foreign state or citizen.

Of Rights and Immunities. “In all criminal trials except impeachment, the trial by jury is guaranteed to the accused. Treason is restricted to the simple acts of levying war against the United States, and adhering to their enemies, giving them aid and comfort; and no person can be convicted, but by two witnesses to the same act, or by confession in open court. A conviction of treason is not followed by a corruption of blood, to disinherit the heirs of the criminal, nor by a forfeiture of estate, except

during the life of the offender. The citizens of each state are entitled to all privileges and immunities of citizens in the several states. Congress may admit new states into the Union; and the national compact guarantees to each state a republican form of government, together with protection from foreign invasion and domestic violence.

It has already been stated, that in April, 1789, General Washington took the chair as the first president of the United States, Messrs. Jefferson, Hamilton, and General Knox, appointed secretaries, and Edmund Randolph, attorney-general.

The secretary of the treasury was directed to prepare a plan for the support of public credit, and report the same at their next meeting.

After the adjournment of congress, the president made a tour through New-England, where he was received by the inhabitants with an affection bordering on adoration. People of all classes crowded to behold the man whose virtues and talents exalted him, in their view, above the heroes of ancient and modern times; and to present to him the undissembled homage of their grateful hearts. But to none did his visit give more exquisite pleasure than to the officers and soldiers of the "patriot army," who had been his companions in suffering and in victory, who were endeared to him by their bravery and fidelity in war, and by the magnanimity with which, in peace, they endured unmerited neglect and poverty.

At the next session of congress, which commenced in January, 1790, Mr. Hamilton, the secretary of the treasury, made his celebrated report upon the public debts contracted during the revolutionary war. Taking an able and enlarged view of the advantages of public credit, he recommended that, not only the debts of the continental congress, but those of the states, arising from their exertions in the common cause, should be funded or assumed by the general government; and that provision should be made for paying the interest, by imposing taxes on certain articles of luxury, and on spirits distilled within the country:

Upon this report, an animated debate took place. Its

recommendations were opposed by that party who had seen, or thought they had seen, in the constitution, many features hostile to freedom, and who remembered that Mr. Hamilton, when a member of the convention, had proposed that the president and senate should be appointed to hold their offices during good behaviour. They now expressed their fears, that the assumption of these debts would render the government still stronger, by drawing around it a numerous and powerful body of public creditors, who, in all the contests with the states or the people, would be bound, by the strongest of all ties, that of interest, to support it, whether right or wrong. This party, existing principally in the southern states, and professing an ardent attachment to the equal rights of man, took the name of republican.

Mr. Madison proposed, that whenever the public securities had been transferred, the highest price which they had borne in the market should be paid to the purchaser, and the residue to the original holder. After an eloquent debate, this proposition was rejected. The party denominated federal, and existing principally in the northern states, supported throughout, with great ability and force of reasoning, the plans of the secretary; but on taking the vote in the house of representatives, they were rejected by a majority of two.

Afterwards this national measure was connected, as is too frequently the case in legislative bodies, with one which had excited much local feeling. It was understood that, should the seat of government be fixed for ten years at Philadelphia, and afterwards permanently at a place to be selected on the Potomac, some southern members would withdraw their opposition to the funding system. A law to that effect was accordingly enacted. The former discussion was then resumed. The plans of the secretary were adopted in the senate, and afterwards in the house, two members representing districts on the Potomac changing their votes. The debt funded amounted to a little more than seventy-five millions of dollars; upon a part of which three per cent., and upon the remainder six per cent. interest was to be paid.

The effect of this measure was great and rapid. The

price of the public paper, which had fallen to twelve or fifteen cents on the dollar, suddenly rose to the sum expressed on the face of it. This difference was gained, in most instances, by purchasers of the securities, who, feeling indebted, for this immense accession of wealth, to the plans of the secretary, regarded him with enthusiastic attachment. But in others, this wealth, suddenly acquired without merit, excited envy and dissatisfaction. These joined the republican party; who fancying they were witnessing the fulfilment of their prediction, became more active in their opposition.

The recommendation of the secretary to impose additional duties, was not acted upon until the next session of congress. Those on distilled spirits were proposed in order to render the burdens of the inhabitants beyond the Allegany mountains, where no other spirits were consumed, equal to those of the inhabitants on the sea coast, who consumed most of the articles on which an impost duty was paid. In the beginning of year 1791, they were laid as proposed. A national bank, recommended also by the same officer, was in the same year incorporated. Both measures met a violent opposition from the republican party.

When the new government was first organized, but eleven states had ratified the constitution. Afterwards, North Carolina and Rhode Island, the two dissenting states, adopted it; the former in November, 1789, the latter in May, 1790. In 1791, Vermont adopted it, and applied to congress to be admitted into the union. The territory of this state, situated between New-Hampshire and New-York, was claimed by both, and both had made grants of land within its limits.

In 1777, the inhabitants, refusing to submit to either, declared themselves independent. Although not represented in the continental congress, yet, during the war they embraced the cause of their brethren in the other states, and to them their aid was often rendered, and was always efficient. Agreeably to their request, an act was now passed, constituting Vermont one of the members of the union. An act was also passed, declaring that the district of Kentucky, then a part of Virginia, should be

admitted into the union on the first day of June, in the succeeding year.

In 1791, was completed the first census or enumeration of the inhabitants of the United States. They amounted to 3,921,326, of which number 695,655 were slaves. The revenue, according to the report of the secretary of the treasury, amounted to 4,771,000 dollars, the exports to about nineteen, and the imports to about twenty millions. A great improvement in the circumstances of the people began at this period to be visible. The establishment of a firm and regular government, and confidence in the men whom they had chosen to administer it, gave an impulse to their exertions, which bore them rapidly forward in the career of prosperity.

In 1790, a termination was put to the war, which, for several years, had raged between the Creek Indians and the state of Georgia. Pacific overtures were also made to the hostile tribes inhabiting the banks of the Scioto and the Wabash. These being rejected, an army of 1400 men, commanded by General Harmer, was despatched against them. Two battles were fought near Chilicothe, in Ohio, between successive detachments from this army, and the Indians, in which the latter were victorious.

Emboldened by these successes, they made more vigorous attacks upon the frontier settlements, which suffered all the distressing calamities of an Indian war. Additional troops were raised, and the command of the whole was given to General St. Clair. With near 2000 men, he marched, in October, into the wilderness. By desertion and detachments, this force was reduced to fourteen hundred men. On the third of November they encamped a few miles from the villages on the Miami, intending to remain there until joined by those who were absent.

But, before sunrise the next morning, just after the troops were dismissed from the parade, they were attacked unexpectedly by the Indians. The new levies, who were in front, rushed back in confusion upon the regulars. These, who had been hastily formed, were thrown into disorder. They, however, with great intrepidity, advanced into the midst of the enemy, who retired from covert to covert, keeping always beyond reach, and again

John Hancock.

General Wayne.

returning as soon as the troops were recalled from pursuit. In these charges, many brave and experienced officers were killed; the loss of men was also great, and no permanent impression was made upon the enemy.

At length, after a contest of three or four hours, St. Clair, whose ill health disabled him from performing the active duties of commander, determined to withdraw from the field the remnant of his troops. The instant that the directions to retire were given, a disorderly flight commenced. Fortunately for the survivors, the victorious Indians were soon recalled from pursuit to the camp, by their avidity for plunder; and the vanquished continued their retreat unmolested to the frontier settlements.

In this battle, the numbers engaged on both sides were supposed to be equal. Of the whites, the slaughter was almost beyond example. Six hundred and thirty were killed and missing, and two hundred and sixty were wounded—a loss which proves at once the obstinacy of the defence, and the bravery of the assailants. On receiving information of this disaster, congress, resolving to prosecute the war with increased vigour, made provision for augmenting, by enlistment, the military force of the nation to 5000 men.

About the first of August, 1794, General Wayne advanced upon the banks of the Miami, at a distance of about thirty miles from the enemy's fort, where he received an additional force from Kentucky under the command of General Scott.

The general made one more effort to settle a peace with the Indians, by inviting them to meet him in a council; but failing in this, he marched against them with his whole force down the Miami, until he reached the rapids, when his advanced guard, under Major Price, fell into an Indian ambuscade.

A rapid and vigorous charge roused the savages from their coverts, and they were driven more than two miles at the point of the bayonet. Broken and dismayed, they fled without renewing the combat. The general returned to his former station by easy marches, and laid waste the Indian villages and cornfields.

By means of this victory over the Miamis, a genera

war with the Six Nations, and all the tribes northwest of the Ohio, was prevented. The Americans had thirty-three killed, viz. 1 captain, 1 lieutenant, 3 sergeants, 28 privates. Wounded—4 captains, 2 lieutenants, 1 ensign, 4 sergeants, 3 corporals, 2 musicians, 84 privates. Total, one hundred.

We learn, by a deserter from the fort to General Wayne, that a counsel of Indians was held a few days after the defeat, in which the British agents endeavoured to persuade them to risk another action; but this they refused to do, expressing a willingness to bury the bloody hatchet, and return to their homes.

Their loss they declared to be 200 killed, besides a large number wounded and missing.

The brave and heroic conduct of every officer and private belonging to the American army, merit the approbation of every American citizen.

In the autumn of 1792, General Washington was again unanimously elected president of the American republic, and in March, 1793, was inducted into office. Mr. Adams was re-elected vice-president, in opposition to George Clinton, of New-York. In the progress of these elections, but little party feeling was exhibited; the repose of society was not disturbed, but the citizens raised to posts of the highest honour, those whom their judgments and affections designated as the most worthy.

Early in April, information was received of the declaration of war by France, against England and Holland. The United States were greatly interested for the success of France, which had assisted us during our revolution.

The French people, at the same time, regarded the Americans as their brethren, bound to them by the ties of gratitude; and when the kings of Europe, dreading the establishment of republicanism in her borders, assembled in arms to restore monarchy to France, she looked across the Atlantic for sympathy and assistance. The new government, recalling the minister whom the king had appointed, despatched the citizen Genet, of ardent temper, and a zealous republican, to supply his place. In April, 1793, he arrived at Charleston, in South Carolina, where he was received, by the governor and the citizens, in a

manner expressive of their warm attachment to his country, and their cordial approbation of the change in her institutions.

Flattered by his reception, and presuming that the nation and the government were actuated by similar feelings, he assumed the authority of expediting privateers from that port to cruise against the vessels of nations who were enemies to France, but at peace with the United States, a procedure forbidden by the laws of nations, and derogatory to the government of the country. Notwithstanding this illegal assumption of power, he received, on his journey to Philadelphia, extravagant marks of public attachment; and, on his arrival there, "crowds flocked from every avenue of the city, to meet the republican ambassador of an allied nation." Intoxicated by these continued and increased demonstrations of regard, he persisted in forming and executing schemes of hostility against the enemies of France.

Mr. Hammond and the American cabinet disapproved of these proceedings, and laid them before the president who appealed to the French government, and they resolved that Genet should be succeeded by Mr. Fauchet and Mr. Monroe was sent out to France to succeed Mr. Morris. The first day of January, 1794, Mr. Jefferson the secretary, resigned, and was succeeded by Edmund Randolph.

Ever since the peace of 1783, the United States and Great Britain complained of each other as violating the stipulation contained in the treaty. The latter was accused of carrying away negroes, and the former for preventing the loyalists from regaining possession of their estates, and British subjects from recovering the debts contracted before the commencement of hostilities. Mr. John Jay was appointed envoy extraordinary to the court of Great Britain, and succeeded in negotiating a treaty with the court of St. James, in June, 1795.

Mr. Hamilton retired from the office of secretary, and was succeeded by Oliver Wolcott, of Connecticut.

As the time for a new election of president approached, Washington signified his intention to retire from public life, and published, at the same time, his farewell address

CHAPTER XIV

Adams's Administration.

In February, 1797, John Adams was declared to be elected president for the term of four years, commencing 4th of March, and Mr. Jefferson, vice-president. Washington retired to Mount Vernon, having established his fame as the greatest hero, and most distinguished statesman of the age. He there devoted his time to the cultivation of an extensive farm, and to the enjoyment, once more, of the sweets of private life.

March 4th, Mr. Adams entered upon the duties of his office. The numerous tribes of Indians on the western territories, had been taught, by arms and justice, to respect the United States, and continue at peace. Treaties had been formed with Algiers and Tripoli, so that the Mediterranean was opened to American vessels.

The administration of Mr. Adams was met at the threshold, by open indignity on the part of France, in her refusing to accept Mr. Pinckney in exchange for Mr. Monroe. This refusal roused the sensibilities of Mr. Adams, and he immediately nominated two others, Mr. Marshall and Mr. Gerry, who were sent out to France to co-operate with Mr. Pinckney, if possible, to settle an accommodation with the directory.

To command the armies of the United States, President Adams, with the unanimous advice of the senate, appointed George Washington. He consented, but with great reluctance, to accept the office; declaring, however, that he cordially approved the measures of the government.

No opportunity was presented of testing the skill and courage of the American troops. At sea, a desperate action was fought between the frigate *Constellation*, of 38 guns, commanded by Commodore Truxton, and the French frigate *L'Insurgente*, of 40 guns. The latter, although of superior force, was captured. The same intrepid officer, in a subsequent action, compelled another French frigate of 50 guns to strike her colours, but she afterwards escaped in the night.

George Washington.

John Adams.

The United States, in arms at home, and victorious on the ocean, commanded the respect of their enemy.—The directory made overtures of peace. The president immediately appointed ministers, who, on their arrival at Paris, found the executive authority in the possession of Bonaparte as first consul. They were promptly accredited, and in September, 1800, a treaty was concluded satisfactory to both countries.

While this negotiation was in progress, the whole American people were overshadowed with gloom, by the sudden death of the father of his country. On the 14th of December, 1799, after an illness of one day only, General Washington expired. Intelligence of this event, as it rapidly spread, produced spontaneous, deep, and unaffected grief, suspending every other thought, and absorbing every different feeling.

Congress, then in session at Philadelphia, immediately adjourned. On assembling the next day, the House of Representatives resolved, “that the speaker’s chair should be shrouded in black, and the members wear black during the session; and that a joint committee should be appointed to devise the most suitable manner of paying honour to the memory of the MAN, first in war, first in peace, and first in the hearts of his countrymen.”

The senate, on this melancholy occasion, addressed a letter of condolence to the president of the United States. “This event,” they observe, “so distressing to all our fellow citizens, must be particularly heavy to you, who have long been associated with him in deeds of patriotism. Permit us, sir, to mingle our tears with yours. On this occasion, it is manly to weep. To lose such a man, at such a crisis, is no common calamity to the world. Our country mourns a father. The Almighty Disposer of human events has taken from us our greatest benefactor and ornament. It becomes us to submit with reverence to HIM who maketh darkness his pavilion.

“With patriotic pride we review the life of our WASHINGTON, and compare him with those of other countries who have been pre-eminent in fame. Ancient and modern names are diminished before him. Greatness and guilt have too often been allied; but his fame is

whiter than it is brilliant. The destroyer of nation stood abashed at the majesty of his virtues. It reproved the intemperance of their ambition, and darkened the splendour of victory.

“Such was the man whom we deplore. Thanks to God, his glory is consummated. Washington yet lives on earth in his spotless example—his spirit is in heaven. Let his countrymen consecrate the memory of the heroic general, the patriotic statesman, and the virtuous sage: let them teach their children never to forget that the fruits of his labours, and of his example, *are their inheritance.*”

Agreeably to the report of the committee, and the unanimous resolves of congress, a funeral procession moved from the legislative hall to the German Lutheran Church, where an oration was delivered by General Lee, a representative from Virginia. The procession was grand and solemn, the oration impressive and eloquent. Throughout the union similar marks of affliction were exhibited. A whole bereaved people appeared in mourning. In every part of the republic, funeral orations were delivered, and the best talents of the nation were devoted to an expression of the nation's grief.

In 1800, congress removed from Philadelphia to a place which had been previously selected; and public buildings were erected on the Potomac, a few miles above Mount Vernon, to which the name of Washington was given, and congress commenced its session for the first time at this place in November.

President Adams' first term was drawing nigh to a close, and the people were to give their votes for the next president.

The federalists supported Mr. Adams, and General Pinckney; the republicans, Mr. Jefferson and Colonel Burr.

The strife of the two parties during the time of electioneering, was spirited. Mr. Jefferson and Mr. Burr received a very small majority, and their votes were equal, each having seventy-three. The house of representatives was called to make a decision. After thirty-five trials, Mr. Jefferson was chosen president, and Mr. Burr vice-president. At this period the population amounted to

5,319,763, having increased about one million four hundred thousand, in ten years.

Mr. Jefferson entered upon the duty of president March 4th, 1801. Mr. Jefferson took a bold and decided stand, as may be seen by the following extract from his message :

“ Equal and exact justice to all men, of whatever state or persuasion, religious or political,—peace, commerce, and honest friendship, with all nations, entangling alliances with none ; the support of the state governments in all their rights, as the most competent administration for our domestic concerns, and the surest bulwarks against anti-republican tendencies :—the preservation of the general government in its whole constitutional vigour, as the sheet anchor of our peace at home, and safety abroad :—a jealous care of the right of election by the people, a mild and safe corrective of abuses which are lopped by the sword of revolution where peaceable remedies are unprovided :—absolute acquiescence in the decisions of the majority, the vital principle of republics, from which is no appeal but to force, the vital principle, and immediate parent of despotisms :—a well-disciplined militia, our best reliance in peace, and for the first moments of war, till regulars may relieve them :—the supremacy of the civil over the military authority :—economy in the public expense, that labour may be lightly burthened.

“ The honest payment of our debts, and sacred preservation of the public faith :—encouragement of agriculture, and of commerce as its hand-maid :—the diffusion of information, and arraignment of all abuses at the bar of public reason :—freedom of religion ; freedom of the press ; and freedom of person, under the protection of the habeas corpus :—and trial by juries impartially selected.” “ These principles,” added Mr. Jefferson, “ should be the creed of our political faith—and should we wander from them in moments of error or of alarm, let us hasten to retrace our steps, and to regain the road which alone leads to peace, liberty, and safety.”

In 1802, Ohio was admitted as an independent state into the union. It derived its name from the River Ohio, which sweeps the southern border of the state. Louisi-

ana was purchased by the United States in April, 1803 for the sum of fifteen millions of dollars.

The Tripolitan cruisers continued to harass the vessels of the United States, and congress determined to act with greater vigour against them. Accordingly, a squadron was fitted out, and the command given to Commodore Preble. On arriving before Tripoli, Captain Bainbridge, in the frigate *Philadelphia*, of 44 guns, was sent into the harbour to reconnoitre. While in eager pursuit of a small vessel, he unfortunately advanced so far that the frigate grounded, and all attempts to remove her were in vain. The sea around her was immediately covered with Tripolitan gun-boats, and Captain Bainbridge was compelled to surrender. The officers were considered as prisoners of war; but the crew, according to the custom of Barbary, were treated as slaves.

At the capture of this frigate, the enemy rejoiced and exulted beyond measure. Lieutenant Stephen Decatur conceived the design of retaking, or destroying her. Commodore Preble, applauding the spirit of the youthful hero, granted him permission to make the attempt. In February, 1804, he sailed from Syracuse, in a small schooner, having on board but seventy-six men, entered undiscovered the harbour of Tripoli, and, advancing boldly, took a station alongside the frigate. Perceiving the crew in consternation, Decatur sprang on board, his men followed, and, with drawn swords, rushed upon the enemy. The decks were soon cleared, some being killed, and others driven into the sea.

A heavy cannonade upon the frigate, from the batteries on shore, and the corsairs near, was now commenced and several vessels of war were seen approaching. She was set on fire and abandoned, none of the party being killed, and but four wounded. Throughout all the piratical states, this brilliant exploit exalted the reputation of the American arms. The president, in reward of his address and bravery, promoted Lieutenant Decatur to the rank of post-captain in the navy.

The Bashaw, who might well be compared to the toad which wished to swell itself to the size of an ox, reposed in fancied security. He cast a malignant glance at the

Burning of the Frigate Philadelphia, in the harbour of Tripoli, Feb. 1804.
Page 252.

Perry's Victory on Lake Erie, September 10, 1813.—Page 287.

little squadron in which Decatur was one of the distinguished leaders. He saw in the bay, spreading before his city, his batteries, and his castles, a noble American frigate, (the Philadelphia,) and the pride of the American navy, upon which the "star spangled banner" once triumphantly waved, now added to his naval force, manned by a double crew of Tripolitans, and with the Turkish crescent waving on its mast. He saw its once gallant crew, miserable slaves in his own gloomy dungeons; and, in anticipation, feasted his cannibal appetite upon all the victims which the American squadron could add to his list of Christian slaves.

The American squadron obliged the Bashaw to smell their powder, and taste their lead, so frequently, that he was obliged to offer favourable terms of peace, which were accepted, and the war in the Mediterranean ended.

In June, 1804, Colonel Burr challenged Mr. Hamilton to settle some trifling offence by a duel, in which the latter was killed.

This year Mr. Jefferson was re-elected president, and George Clinton, vice-president; and their term of office commenced in March, 1805. This year Michigan became a government of the United States, and General Hull was appointed by Mr. Jefferson the first governor.

Burr, notwithstanding his brilliant talents, now sunk, for a time, into merited obscurity. His future conduct showed, however, that, while unobserved by his fellow-citizens, he had not been idle. In the autumn of 1806, his movements in the western country attracted the notice of government. He had purchased and was building boats on the Ohio, and engaging men to descend that river. His declared purpose was to form a settlement on the banks of the Washita, in Louisiana; but the character of the man, the nature of his preparations, and the incautious disclosures of his associates, led to the suspicion that his true object was either to gain possession of New-Orleans, and erect into a separate government the country watered by the Mississippi and its branches, or to invade, from the territories of the United States, the rich Spanish province of Mexico.

From the first moment of suspicion, he was closely

watched by the agents of the government. At Natchez while on his way to New-Orleans, he was cited to appear before the supreme court of the Mississippi territory.— But he had so enveloped his projects in secrecy, that sufficient evidence to convict him could not be produced, and he was discharged. Hearing, however, that several persons, suspected of being his accomplices, had been arrested at New-Orleans and elsewhere, he fled in disguise from Natchez, was apprehended on the Tombigbee, and conveyed a prisoner to Richmond. Two indictments were found against him, one charging him with treason against the United States, the other with preparing and commencing an expedition against the dominions of Spain.

In August, 1807, he was tried upon those indictments, before John Marshall, the chief justice of the United States. Full evidence of his guilt not being exhibited, he was acquitted by the jury. The people, however, believed him guilty; and by their desertion and contempt, he was reduced to a condition of the most abject wretchedness. The ease with which his plans were defeated, demonstrated the strength of the government; and his fate will ever be an impressive warning to those who, in a free country, listen to the suggestions of criminal ambition.

In June, 1807, an event occurred, which, for a time, concentrated upon one of the several nations the whole weight of popular indignation.

On the 22d of June, the Chesapeake weighed anchor and proceeded to sea. She passed the British ships *Belona* and *Melampus*, lying in Lynnhaven bay, whose appearance was friendly. There were two other ships that lay off Cape Henry, one of which, the *Leopard*, Captain Humphreys, weighed anchor, and in a few hours came alongside the Chesapeake.

A British officer immediately came on board, and demanded the deserters. To this, Captain Barron replied, that he did not know of any being there and that his duty forbade him to allow of any muster of his crew, except by their own officers.

During this interview, Barron noticed some proceedings of a hostile nature on board the adverse ship, but

he could not be persuaded that any thing but menace was intended by them. After the British officer departed, he gave orders to clear his gun deck, and after some time, he directed the men to their quarters secretly, and without beat of drum; still, however, without any serious apprehensions of an attack.

Before these orders could be executed, the *Leopard* commenced a heavy fire. This fire unfortunately was very destructive. In about thirty minutes, the hull, rigging, and spars of the *Chesapeake* were greatly damaged, three men were killed, and sixteen wounded; among the latter was the captain himself. Such was the previous disorder, that during this time, the utmost exertions were insufficient to prepare the ship for action, and the captain thought proper to strike his colours.

The British captain refused to accept the surrender of the *Chesapeake*, but took from her crew, Ware, Martin and Strachan, the three men formerly demanded as deserters, and a fourth, John Wilson, claimed as a runaway from a merchant ship.

This insolent attack upon a national ship,—this wanton exercise of a claim derogatory to national honour,—aroused the spirit of the republic. The distinctions of party were forgotten; numerous meetings of the citizens were held, and all concurred in the expression of a determination to support the government of their country in its efforts to obtain, whether by negotiation or war, satisfaction for this insulting outrage.

The president, by proclamation, prohibited all British ships of war from continuing in or entering the harbours of the United States. He sent instructions to the minister at London to demand satisfaction for the insult, and security against future aggression. He summoned congress to meet and decide what further measures should be adopted. The British government, promptly disavowing the act of its officer, the hostile feelings which had been excited began to subside; but delaying to render satisfaction, and refusing to adopt adequate measures to prevent a continuance of aggression, they were not extinguished nor appeased.

On the 6th of November following, the Emperor Napo-

leon issued his Berlin decree, which declared all the British isles in a state of blockade. This decree was in direct violation of the treaty between France and the United States, as well as of the law of nations.

On the 7th of January, 1807, the British government met this decree by an order in council, declaring "all vessels coasting from one port to another on the coast of France, or that of her allies, liable to seizure and condemnation."

On the 11th of November, Great Britain repeated her orders in council, by way of retaliation upon the French decrees, "declaring all nations at war with Great Britain, and all ports from which the British flag is excluded, to be under the same restrictions in point of trade and navigation, as if the same were in a state of blockade."

To retaliate upon Great Britain for her orders in council, the French emperor issued his Milan decree, declaring "all vessels denationalized, which shall have submitted to a search from a British ship, and every vessel a good prize, which shall sail to or from Great Britain, or any of her colonies or countries occupied by British troops," December 17th, 1807.

On the 22d, congress laid an indefinite embargo.

Thus balanced, America began to feel more immediately the convulsions of Europe, and to find herself involved in the contest. One grand system of intrigue now pervaded all Christendom, and paved the way for the calamities that followed.

Mr. Jefferson, being desirous of confirming the example of Washington, declined a re-election. James Madison was elected president, and George Clinton re-elected vice-president, March, 1809.

Great Britain continued to violate the laws of peace. She had ships of war stationed before the principal harbours of the United States. American merchantmen were boarded, searched, and many of them sent to British ports as legal prizes.

Commodore Rodgers, commanding the frigate *President*, was fired upon by the British sloop of war *Little Belt*, of 18 guns; but the *President* being a superior force, the *Little Belt* was soon silenced with considerable loss.

Thomas Jefferson.

James Madison.

Congress, in November, 1811, passed a law to increase the regular army to 35,000 men; empowered the president to accept the services of volunteers, and to borrow eleven million dollars.

Congress continued to make preparations for war, yet still cherishing the hope, that a change of policy in Europe would render unnecessary an appeal to arms. On the 20th of May, 1812, the *Hornet* arrived from London, bringing information that no prospect existed of a favourable change. On the first of June, the question in congress was, whether they should continue to endure their wrongs, or resort to arms.

The British government had been told, in plain terms, that if they continued to drag the American seamen from their ships, and rob the vessels of their goods, war would be inevitable.

Congress, after sitting a number of days with closed doors, declared war against Great Britain, on the 18th of June, 1812; and, on the following day, war was publicly proclaimed.

The president was authorized to receive 50,000 volunteers, and to call out one hundred thousand militia. Governor Hull, at the head of about two thousand men, was on his march to Detroit, with a view of putting an end to the Indian hostilities, when he received information of the declaration of war. This little army marched to Spring Wells, within a few miles of Detroit, July 5th; there they had some small skirmishes with the Indians, but soon compelled them to retire, and Hull proceeded, without molestation, to Sandwich. Here he was met by a superior force, under the command of General Brock. General Hull hastened back to Detroit.

On the 14th, the British took a position opposite to Detroit, and erected batteries. The next day they began a cannonade upon the American fortifications, which was returned with precision and effect. On the 16th, the enemy crossed the river, taking post about three miles above the town, and advanced towards the fort in close columns, twelve deep. The hearts of our soldiers now beat high at their approach, expecting to regain their cre-

dit. But who can describe the chagrin and mortification which took possession of these troops.

At the very moment the destruction of the enemy was certain, orders were given not to fire. The troops were ordered to stack their arms, and, to the astonishment of all, a white flag, in token of submission, was suspended from the walls. Words are wanting to express the feelings of the Americans on this occasion; they considered themselves basely betrayed, in thus surrendering to an inferior force, without firing a gun, when they were firmly convinced the enemy were in their power.

General Hull was exchanged for thirty British prisoners, brought before a court martial, charged with treason, cowardice, and unofficer-like conduct, was sentenced to death. The sentence was remitted by the president, but his name was ordered to be struck from the rolls of the army. While the nation was overspread with gloom in consequence of this disaster, they were suddenly consoled in the most pleasing manner. A new and glorious era burst upon our country, and upon the world.

At the moment of the declaration of war, a squadron under Commodore Rodgers, had rendezvoused under the order of the government, off Sandy Hook, consisting of the frigates *President*, *Congress*, *United States*, and the brig *Hornet*. On the 21st of June they put to sea, in pursuit of a British squadron, which had sailed as the convoy of the West India fleet the preceding month. While thus engaged, the British frigate *Belvidera* was discovered, to which they instantly gave chase. The chase was continued from early in the morning until past four in the afternoon, when the *President*, outsailing the other vessels, had come within gun shot, she opened a fire with her bow guns, intending to cripple the *Belvidera*, which returned it with her stern-chasers.

The firing was kept up for ten minutes, when one of the guns of the *President* burst, killed and wounded sixteen men, and fractured the leg of the commodore. By this accident, and the explosion of the passing box, the decks were so much shattered, as to render the guns on that side useless. The ship was then put about, and a broadside fired, but without the desired effect, though considerable injury

was done the *Belvidera*. This vessel, having thrown overboard every thing she could spare, now gained ground. The chase was continued until eleven o'clock at night, before it was deemed hopeless. The squadron then continued in pursuit of the convoy, which it did not give over until within sight of the British channel; then stood for the island of Madeira, and thence passing the Azores, stood for Newfoundland, and thence by Cape Sable, arrived at Boston the 30th of August, having made prize of several British vessels; but owing to the haziness of the weather, they were less successful than might have been expected.

The frigate *Essex* went to sea from New-York, on the third of July; the *Constitution* sailed from the Chesapeake on the 12th; the brigs *Nautilus* and *Vixen* were at the same time cruising off the coast; the sloop of war *Wasp* was at sea, on her return from France.

The *Constitution*, Captain Hull, had sailed from Annapolis on the 5th of July. On the morning of the 17th, off Egg Harbour, she was chased by a ship of the line, the *Africa*, and the frigates *Shannon*, *Guerriere*, *Belvidera*, and *Æolus*. These vessels were approaching rapidly, with a fine breeze, while it was nearly a calm about the *Constitution*. At sunrise the next morning, escape from the enemy was almost hopeless, as they were then within five miles. The *Constitution* was therefore cleared for action, determined to make a desperate resistance. The enemy still drawing near, Captain Hull resolved to make another effort to escape. Boats were sent ahead, with anchors, for the purpose of warping; there prevailing almost a calm. The others finding the *Constitution* gaining upon them, resorted to the same expedient. The chase continued in this manner for two days, partly sailing with light breezes, and partly warping, until the 20th, when the squadron was left entirely out of sight. This escape, from so great a disparity of force, was considered as deserving a high rank in naval exploits, and was much admired at the time, as evincing superior nautical skill. The advantage to the British, in this chase, was considerable, when we reflect that their foremost vessel had the assistance of all the boats of the squadron for the pur-

pose of towing. The superiority of Captain Hull was that of seamanship alone. This superiority was sometime afterwards proved in a most remarkable manner; while naval history lasts it will not be forgotten.

The Constitution again put to sea, on the second of September. On the nineteenth, a vessel hove in sight, and a chase instantly commenced. It was soon discovered to be the *Guerriere*, one of the best frigates in the British navy, and which seemed not averse from the rencontre, as she backed her maintopsail, waiting for the Constitution to come down. This was a most desirable occurrence to our brave tars, as this frigate had for some time been in search of an American frigate, having given a formal challenge to all our vessels of the same class. She had at one of her mast heads a flag, on which her name was inscribed in large characters, by way of gasconade, and on another, the words "not the Little Belt," in allusion to the broadsides which the President had given that vessel before the war.

The *Guerriere* had looked into several of our ports, and affected to be exceedingly anxious to earn the first laurel from the new enemy. The Constitution being made ready for action, now bore down, her crew giving three cheers. At first it was the intention of Captain Hull to bring her to close action immediately; but on coming within gunshot, she gave a broadside and filled away, then wore, giving a broadside on the other tack, but without effect. They now continued wearing, and manœuvring on both sides, for three quarters of an hour, the *Guerriere* attempting to take a raking position; but failing in this, she bore up, under her topsail and jib. The Constitution perceiving this, made sail to come up with her. Captain Hull, with admirable coolness, received the enemy's fire, without returning it.

The enemy, mistaking this conduct on the part of the American commander, for want of skill, continued to pour out his broadsides, with a view to cripple his antagonist. From the Constitution not a gun had been fired. Already had an officer twice come on deck, with information that several of the men had been killed at their guns. The gallant crew, though burning with impatience, silently

awaited the orders of their commander. The moment so long looked for, at last arrived. Sailing Master Aywin, having seconded the views of the captain with admirable skill, in bringing the vessels exactly to the station intended, orders were given, at five minutes before five, P. M. to fire broadside after broadside in quick succession. The crew instantly discovered the whole plan, and entered into it with all the spirit the circumstance was calculated to inspire. Never was any firing so dreadful. For fifteen minutes the vivid lightning of the Constitution's guns continued one blaze, and their thunder roared with scarce an intermission.

The enemy's mizenmast had gone by the board, and he stood exposed to a raking fire, which swept his decks. The *Guerriere* had now become unmanageable; her hull, rigging, and sails, dreadfully torn; when the Constitution attempted to lay her on board. At this moment, Lieutenant Bush, in attempting to throw his marines on board, was killed by a musket ball, and the enemy shot ahead, but could not be brought before the wind. A raking fire now continued for fifteen minutes longer, when his mainmast and foremast went, taking with them every spar, excepting the bowsprit. On seeing this, the firing ceased, and, at twenty-five minutes past five, she surrendered. "In thirty minutes," says Captain Hull, "after we got fairly alongside of the enemy, she surrendered, and had not a spar standing, and her hull, above and below water, so shattered, that a few more broadsides must have carried her down.

The *Guerriere* was so much damaged, as to render it impossible to bring her in; she was, therefore, set fire to the next day, and blown up. The damage sustained by the Constitution, was comparatively of so little consequence, that she actually made ready for action when a vessel appeared in sight the next day. The loss on board the *Guerriere* was fifteen killed, and sixty-three wounded; on the side of the Constitution seven killed, and seven wounded. It is pleasing to observe, that even the British commander, on this occasion, bore testimony to the humanity and generosity with which he was treated by the victors. The American frigate was somewhat superior

in force, by a few guns, but this difference bore no comparison to the disparity of the conflict. The *Guerriere* was thought to be a match for any vessel of her class and had been ranked among the largest in the British navy. The *Constitution* arrived at Boston on the 28th of August, having captured several merchant vessels.

On the 7th of September, Commodore Porter, of the *Essex*, fell in with a fleet of merchantmen, and at night cut out a brig with a hundred and fifty soldiers on board, which was ransomed for 14,000 dollars. On the 13th of August, the *Essex* fell in with the *Alert*, sloop of war, and captured her in eight minutes.

On the 8th of October, a squadron, consisting of the *President*, the *United States*, *Congress*, and the *Argus*, sailed from Boston on a cruise. On the 13th, the *United States* and *Argus* parted from the rest in a gale of wind. A few days afterwards, the *President* and *Congress* had the good fortune to capture the British packet *Swallow*, with 200,000 dollars on board; and, on the 30th of December arrived at Boston, after a very successful cruise.

The *Argus* was not less fortunate: after parting from the squadron, she cruised in every direction, between the continent and the West Indies, and, after being out ninety-six days, she returned to New-York with prizes to the amount of two hundred thousand dollars. She made various hairbreadth escapes; at one time, she was chased by a British squadron for three days, and several times almost surrounded; she was one moment within pistol shot of a seventy-four, and yet, in the midst of all this peril, she actually captured and manned one of her prizes.

The *United States*, commanded by that distinguished officer, Commodore Decatur, soon after her separation from the squadron, had the good fortune to add another victory to our Naval Chronicle, not less glorious than that of the *Constitution*. On the 25th of October, off the Western Islands, she fell in with the *Macedonian*, Capt. Carden, a frigate of the largest class, carrying 49 guns and 300 men. The *Macedonian*, being to windward, she had it in her power to choose her distance, and at no time were they nearer than musket-shot; from this circum-

Capture of the Macedonian, October 25, 1812.—Page 263.

Capture of the Frolic, October 18, 1812.—Page 264.

stance, and the prevalence of a heavy sea, the action lasted nearly two hours. The superiority of the American gunnery, in this action, was very remarkable, both for its greater rapidity and effect. From the continued blaze of her guns, the United States was, at one moment, thought by her antagonist to be on fire; a mistake of very short duration.

On board the Macedonian there were 36 killed and 68 wounded. She lost her mainmast, her main-topmast, and main yard, and was much cut up in her hull. The United States suffered so little, that a return to port was not necessary; she had only five killed, and seven wounded. Among the killed, was Lieutenant Funk, of whom the commodore spoke in the highest terms. Lieutenant Allen was on this occasion highly applauded. The commodore arrived at New-York on the 4th of December, with his prize. Commodore Decatur, already a universal favourite, experienced the same demonstrations of gratitude as were shown to Capt. Hull; nor was there denied him that new species of praise, which the generous conduct of our heroic seamen has uniformly drawn forth, the praise of the enemy; all the private property belonging to the men and officers on board the Macedonian, was restored to the captured, with the most rigid exactitude; and their treatment was the most polite and humane.

An act of generosity and benevolence on the part of our brave tars, of the victorious frigate, deserves to be honourably recorded. The carpenter, who was unfortunately killed in the conflict with the Macedonian, had left three small children to the care of a worthless mother. When the circumstance became known to the brave seamen, they instantly made a contribution amongst themselves, to the amount of eight hundred dollars, and placed it in safe hands, to be appropriated to the education and maintenance of the unhappy orphans.

The feelings of the nation had scarce time to subside, when the welcome news of another victory was received; a victory over an enemy most decidedly superior in force, and under circumstances the most favourable to him. This was the capture of the brig Frolick, of 22 guns, by the sloop of war Wasp. Captain Jones had returned from

France two weeks after the declaration of war, and on the 13th of October again put to sea. On the 16th, he experienced a heavy gale, in which the *Wasp* lost her jib-boom and two men. On the evening of the following day, the *Wasp* found herself near five strange sail, and as two of them appeared to be ships of war, it was thought proper to keep at a distance.

At day-light on Sunday morning, they were discovered to be six merchant ships, from Honduras to England, under strong convoy of a brig and two ships, armed with sixteen guns each. The brig, which proved to be the *Frolic*, Capt. Winyates, dropped behind, while the others made sail. The *Wasp*, being prepared for action, at 32 minutes past 11 o'clock, came down to the windward in handsome style, when the action was begun by the enemy's cannon and musketry. This was returned, and approaching still nearer the enemy, brought her to close action. In five minutes the main-topmast of the *Wasp* was shot away, and falling down with the main-topsail yard across the larboard fore and fore-topsail, rendered her head yards unmanageable during the rest of the action. In two minutes more her gaff and mizzen top-gallantmasts were shot away. The sea being exceedingly rough, the muzzles of the *Wasp's* guns were sometimes under water.

The English fired as their vessel rose, so that their shot was either thrown away, or touched the rigging of the Americans; the *Wasp*, on the contrary, fired as she sunk, and every time struck the hull of her antagonist.—The *Wasp* now shot ahead, raked her, and then resumed her position. The *Frolic's* fire had evidently slackened, and the *Wasp* gradually neared her, until, the last broadside, they touched her side with their rammers. It was determined to lay her by the board. The jib-boom of the *Frolic* came in between the main and mizzen-mast rigging of the *Wasp*, and, after giving a raking fire, which swept the whole deck, they resolved to board.

Lieutenant Biddle sprang on the rigging of the enemy's bowsprit, where he was at first somewhat entangled, and Midshipman Barker, in his impatience to be on board, caught hold of Biddle's coat, and fell back on the deck, but in a moment sprang up and leaped on the bowsprit,

where he found one Lang, and another seaman. His surprise can scarcely be imagined, when he found no person on deck except three officers, and the seaman at the wheel. The deck was slippery with blood, and presented a scene of havoc and ruin, such as has been seldom witnessed. As he advanced the officers threw down their swords in submission. The colours were still flying, there being no seamen left to pull them down. Lieutenant Biddle leaped into the rigging, and hauled them down with his own hands.

Thus, in forty-three minutes, complete possession was taken of the Frolic, after one of the most bloody conflicts any where recorded in naval history. The condition of this unfortunate vessel was inexpressibly shocking. The birth deck was crowded with the dead, the dying, and the wounded: and the masts, which soon after fell, covering the dead, and every thing on deck, leaving her a most melancholy wreck. Captain Jones sent on board his surgeon, and humanely exerted himself in their relief, to the utmost of his power. The loss on board the Frolic was thirty killed, and fifty wounded; on board the Wasp, five killed, and five slightly wounded. This was certainly the most decisive action fought during the war. The Wasp and Frolic were both captured that very day by a British seventy-four, the Poictiers, Captain Beresford.

On the 4th of March, 1813, Mr. Madison entered upon the second term of his office, Mr. George Clinton was elected vice-president, but soon after died, and was succeeded by Elbridge Gerry.

So great was the desire of the citizens of the western country to regain possession of the territory of Michigan, that, in order to effect it, General Harrison resolved to undertake a winter campaign. General Winchester, with a portion of the western army, proceeded in advance to Frenchtown, a village on the River Raisin, not far from Detroit. A British party, stationed in the village, was attacked, routed, and entirely dispersed.

The Americans encamped near the field of battle, a part of them being protected by close garden pickets. Although near an enemy's post, but little precaution was taken to prevent a surprise. Early in the morning of the

22d of January, they were attacked by a large force of British and Indians, the former commanded by Colonel Proctor, the latter by the Chiefs Roundhead and Splitlog. The troops in the open field were thrown into disorder. General Winchester, and other officers, made an ineffectual attempt to rally them. They fled, but, while attempting to escape, were mostly killed by the Indians. The General, and Colonel Lewis, were made prisoners.

The troops behind the pickets maintained the contest with undaunted bravery. At length Colonel Proctor assured General Winchester, that if the remainder of the Americans would immediately surrender, they should be protected from massacre; but otherwise he would set fire to the village, and would not be responsible for the conduct of the savages. Intimidated by this threat, General Winchester sent an order to the troops to surrender, which they obeyed.

Colonel Proctor, leaving the wounded without a guard, marched back immediately to Malden. The Indians accompanied them a few miles, but returned early the next morning. Deeds of horror followed. The wounded officers were dragged from the houses, killed and scalped in the streets. The buildings were set on fire. Some who attempted to escape, were forced back into the flames. Others were put to death by the tomahawk, and left shockingly mangled in the highway. The infamy of this butchery should not fall upon the perpetrators alone. It must rest equally upon those who instigated them to hostility, by whose side they fought, who were able and were bound by a solemn engagement to restrain them.

The battle and massacre at Frenchtown, clothed Kentucky and Ohio in mourning. Other volunteers, indignant at the treachery and cruelty of their foes, hastened to the aid of Harrison. He marched to the rapids of the Miami, where he erected a fort, which he called Fort Meigs, in honour of the governor of Ohio. On the first of May, it was invested by a large number of Indians, and by a party of British troops from Malden, the whole commanded by Colonel Proctor.

Five days afterwards, General Clay, at the head of 1200 Kentuckians, made an attempt to raise the siege. Divi-

ding his force into several parties, and making an impetuous onset, he drove the besiegers from their works. His troops, supposing the victory complete, and disregarding the orders of their commander, dispersed into the woods. The enemy, returning from their flight, obtained an easy victory.

Of the Americans, two or three hundred escaped into the fort; about three hundred were killed or made prisoners; the remainder fled to the nearest settlements. The enemy sustained considerable loss. The fort continued to be defended with bravery and skill. The Indians, unaccustomed to sieges, became weary and discontented. On the 8th of May, notwithstanding the entreaties of their chief, Tecumseh, they deserted their allies. On the 9th, the enemy, despairing of success, made a precipitate retreat. General Harrison, leaving General Clay in command, returned to Ohio for reinforcements; but in this quarter active operations were not resumed, until a squadron had been built and prepared for action on Lake Erie.

At Sackett's Harbour, on the northern frontier, a body of troops had been assembled, under the command of General Dearborn, and great exertions were made, by Commodore Chauncey, to build and equip a squadron, on Lake Ontario, sufficiently powerful to contend with that of the enemy. By the 25th of April, the naval preparations were so far completed, that the general, and 1700 troops, were conveyed across the lake to the attack of York, the capital of Upper Canada.

On the 27th, an advanced party, led by Brigadier-General Pike, who was born in a camp, and bred a soldier from his birth, landed, although opposed at the water's edge by a superior force. After a short but severe conflict, the enemy were driven to their fortifications. The rest of the troops having landed, the whole party pressed forward, carried the first battery by assault, and were moving towards the main works, when the enemy's magazine blew up, with a tremendous explosion, hurling upon the advancing troops immense quantities of stone and timber.

Numbers were killed; the gallant Pike received a mortal wound; the troops halted for a moment, but recover-

ing from the shock, again pressed forward, and soon gained possession of the town. Of the British troops, one hundred were killed, nearly three hundred were wounded, and the same number made prisoners. Of the Americans, three hundred and twenty were killed and wounded, and nearly all of them by the explosion of the magazine. The flag which waved over the fort, was carried to the dying Pike; at his desire it was placed under his head, when, with the smile of triumph on his lips, he expired.

The object of the expedition attained, the squadron and troops returned to Sackett's Harbour, whence the wounded and prisoners being landed, and other troops taken on board, it sailed to Fort George, at the head of the lake. After a warm engagement, the enemy abandoned, and the Americans entered the fort. The fugitives retired to the heights at the head of Burlington Bay. On their retreat, they were joined by a detachment from Fort Erie and Chippeway. Two brigades, under Generals Chandler and Winder, were despatched in pursuit. On the evening of the 5th of June, they encamped at Stoney Creek, in the vicinity of the enemy, who, considering their situation desperate, turned upon their pursuers, and attacked them in the night.

The Americans received them with coolness; but such was the darkness, that General Chandler, intending to place himself at the head of his artillery, threw himself into the midst of a British party. A few minutes afterwards, the same mistake was committed by General Winder. Satisfied with the capture of these officers, and a few other prisoners, the enemy made a precipitate retreat. The American troops returned to Fort George. The misfortune was soon followed by another. Lieutenant-Colonel Boerstler, having been sent, with five hundred men, to disperse a body of the enemy collected at the Beaver Dams, was surrounded, and the whole detachment made prisoners.

While the greater part of the American army was thus employed in Canada, the British made an attack upon the important post of Sackett's Harbour. On the 27th of May, their squadron appeared before the town. Alarm

Victory of York, U. C. Death of General Pike.—Page 268.

Capture of the Peacock by Capt. Lawrence.—Page 263.

guns instantly assembled the citizens of the neighbourhood. General Brown, of the New-York militia, commanded in chief, his whole force amounting to about one thousand men. By his orders, a slight breast-work was hastily thrown up, at the only place where the enemy could land. Behind this he placed the militia, the regulars under Colonel Backus forming a second line.

On the morning of the 29th, one thousand British troops landed from the squadron. They advanced towards the breastwork. The militia, seized with a sudden panic, fled in confusion. Colonel Mills, in a vain attempt to rally them, was mortally wounded. The regulars, after a spirited resistance, were compelled to retire towards the town, but in their retreat they took possession of the houses on the road. From these coverts they poured so destructive a fire upon the British column, that it halted and fell back.

General Brown, by a stratagem, converted this slight check into a precipitate flight. Collecting the panic struck militia, he directed their course along a road, which, while it led from the village, appeared to the British commander to lead to the place of landing. Perceiving them marching with great speed, he supposed that their object was to cut off his retreat, and re-embarked so hastily as to leave behind most of his wounded. General Brown, in recompense for his services, was appointed a brigadier in the regular army.

Meanwhile, upon the sea coast, a distressing and predatory war was carried on, by a large detachment from the powerful navy of Great Britain. One squadron, stationed in Delaware bay, captured and burned every merchant vessel which came within its reach. The inhabitants of Lewiston, in the state of Delaware, having refused to sell provisions to the enemy, the village was bombarded, and several attempts were made to land, but they were defeated by the militia.

On the fourth of February, a squadron consisting of two ships of the line, three frigates, and other vessels, made its appearance in the Chesapeake, apparently standing for Hampton Roads. The alarm was immediately caught at Norfolk, and the militia called in from the upper

part of the state. No attempt, however, was made upon the town, the enemy contenting himself with destroying the smaller vessels employed in the navigation of the bay, and effectively blockading its waters. About the same time, another squadron under the command of Commodore Beresford, appeared in the Delaware, consisting of the Poictiers, the Belvidera, and some other vessels, which in the same manner destroyed a number of small trading vessels, and attempted several times to land some of their men, who were as often repulsed by the militia, hastily collected.

On the 10th of April, Sir John Beresford made a demand on the people of the village of Lewiston, for a supply of provisions, which was spiritedly refused by Colonel Davis, commanding at that place. Captain Byron, of the Belvidera, was ordered to move near the village and bombard it, until the demand should be complied with. This was obeyed, but without effect; after a cannonade of twenty hours, they were unable to make any impression on the place. Their fire had been returned from some batteries, hastily thrown up on the bank, with considerable effect. On the 10th of May, the same squadron sent out their barges in the neighbourhood of Lewiston, to procure water. Major George Hunter was detached by Colonel Davis, with one hundred and fifty men, to oppose their landing, which the major did with so much gallantry, that he compelled them to hasten to their shipping. The squadron soon after returned to Bermuda, where sir J. Borlace Warren, who commanded on this station, was engaged in fitting out a more considerable armament, for the attack of our sea coast during the summer.

Soon after the departure of the squadron, the Spartan, and some other frigates, entered the Delaware. One of their vessels, the Martin, was discovered on the twenty-ninth of July, slightly grounded on the outer edge of Crow's Shoals. A detachment of the gun-boat flotilla immediately moved, and, anchoring in a line about three quarters of a mile from the sloop, opened a destructive fire upon her. The Junon frigate soon after came off to her relief; a cannonade was kept up during an hour, between the gunboats and these two vessels, in which the latter suffered great injury. Finding it impossible to

drive off this musqueto fleet, they manned their launches, tenders, and cutters, to cut off the gun-boats at the extremity of the line. No. 121, commanded by Sailing Master Head, was unfortunately taken, after a desperate resistance against eight times her number. The British soon after made sail, the Martin having been extricated from her situation.

Scenes of a different kind were, in the meanwhile, acting in the Chesapeake. The squadron, which returned in February, still continued to carry on a predatory war along the shores and inlets. It was here that one Cockburn, by some means an admiral in the service of the king of England, exhibited the first of those exploits, for which he afterwards became so highly celebrated, and of which he may justly claim to be the originator. At first they were directed against the detached farm houses, and seats of private gentlemen, unprepared for, and incapable of defence; these were robbed, and the owners treated in the rudest manner. The cattle which could not be carried away, were doomed to wanton destruction; the slaves were armed against their owners, and persuaded to follow the example of their new friends, to attack their master's defenceless families, and to engage in pillaging them.

It was impossible to station a force at each farm house, to repel these miserable and disgraceful incursions; yet, in several instances, Cockburn and his ruffians were bravely repelled by a collection of the neighbours, without authority, and under no leader. The spirited citizens of Maryland formed bodies of cavalry, which were stationed at intervals along the shore, to be drawn out at a moment's warning, for the purpose of repelling the sudden inroads of the enemy. Cockburn took possession of several islands in the bay, particularly Sharp's, Tilghman's, and Poplar islands, whence he could seize the opportunity of making a descent upon the neighbouring shores, when the inhabitants happened to be off their guard.

Encouraged by his success against the farmers, and his rapacity increasing by the booty which he had already obtained, Cockburn now resolved to undertake something

of a more bold and adventurous character, in which his thirst for plunder, and his love of mischief, might be gratified in a higher degree. He, therefore, directed his attention to the unprotected villages and hamlets along the bay, carefully avoiding the larger towns, the plundering of which might be attended with some danger. The first of these exploits was against the village of Frenchtown, containing six dwelling houses, two large storehouses, and several stables. It was important, however, as a place of deposit on the line of packets and stages from Philadelphia to the city of Baltimore, and Cockburn rightly conjectured, that here there might be private property to a considerable amount.

He accordingly set out on this expedition, from his ship, the Marlborough, in barges, with five hundred marines; a sufficient number to have carried the town on their backs. Some show of resistance was made by a small party of militia collected from Elkton, but which moved off as the admiral approached. The storehouses were destroyed, together with the goods they were unable to carry off, to an immense amount. Amongst other objects of wanton destruction, was an elegant drop-curtain, intended for the theatres of the cities before mentioned. The brand was applied to some of the private dwelling houses, and to several vessels lying at the wharf; after achieving this glorious victory, the admiral, fearing the approach of the militia, hastily retired to his ship.

The next exploit of the admiral was of still greater importance. The town of Havre de Grace is situated on the Susquehannah, about two miles from the head of the bay, and is a neat village, containing twenty or thirty houses. An attack on this place was the next object which entered into the plan of the admiral's operations. Accordingly, on the third of May, before day-light, his approach was announced by a few cannon shot, and the firing of rockets. The inhabitants, roused from their sleep, leaped up in the greatest consternation, and the more courageous repaired to the beach, where a few small pieces of artillery had been planted on a kind of battery for the purpose of defence against the smaller watering or plundering parties of the enemy.

After firing a few shots, with the exception of an old citizen of the place, of the name of O'Neill, they all fled on the approach of the barges, abandoning the village to the mercy of Cockburn. O'Neill alone continued to fight, loading a piece of artillery, and firing it himself, until by recoiling it ran over his thigh, and wounded him severely. He then armed himself with a musket, and limping away, still kept up a retreating fight with the advancing column of the British, who had by this time landed and formed; after which he moved off to join his five or six comrades, whom he attempted in vain to rally.

The ocean, in the mean time, had been the theatre of sanguinary conflicts, in which the victors gained untarnished laurels. Captain Lawrence, in the sloop of war *Hornet*, discovering in the neutral port of San Salvador, a British sloop of war of superior force, challenged her commander to meet him at sea. The challenge being declined, Captain Lawrence blockaded the port, until forced by a ship of the line to retire.

Soon after, on the 23d of February, the *Hornet* met the British brig *Peacock*, of about equal force. A fierce combat ensued. In less than fifteen minutes, the *Peacock* struck her colours, displaying, at the same time, a signal of distress. The victors hastened to the relief of the vanquished, and the same strength which had been exerted to conquer was now exerted to save. Their efforts were but partially successful. She sunk before all her crew could be removed, carrying down nine British seamen and three brave and generous Americans. In the battle, the loss of the *Hornet* was but one killed and two wounded; that of the *Peacock* was never ascertained.

On his return to the United States, Captain Lawrence was promoted to the command of the frigate *Chesapeake*, then in the harbour of Boston. For several weeks, the British frigate *Shannon*, of equal force, but having a selected crew, had been cruising before the port; and Captain Broke, her commander, had announced his wish to meet, in single combat, an American frigate. Inflamed by this challenge, Captain Lawrence, although his crew was just enlisted, and his officers were strangers to him

and to each other, set sail, on the first of June, in pursuit of the Shannon.

Towards evening of the same day, they met, and instantly engaged, with unexampled fury. In a very few minutes, and in quick succession, the sailing master of the Chesapeake was killed, Captain Lawrence and three lieutenants were severely wounded; her rigging was so cut to pieces that she fell on board the Shannon; her chest of arms blew up; Captain Lawrence received a second and mortal wound, and was carried below; at this instant, the position of the ships being favourable, Captain Broke, at the head of his marines, gallantly boarded the Chesapeake, when every officer who could take command being killed or wounded, resistance ceased, and the American flag was struck by the enemy.

That fortune favoured the Shannon cannot be doubted. That the event would have been the same had fortune favoured neither, is rendered probable by the astonishing effect of her fire. This unexpected defeat impelled the Americans to seek for circumstances consoling to their pride; and in the journals of the day, many such were stated to have preceded and attended the action. But nothing could allay their grief at the fall of the youthful and intrepid Lawrence. His previous victory and magnanimous conduct had rendered him the favourite of the nation, and he was lamented with sorrow, deep, sincere, and lasting. When carried below, he was asked if the colours should be struck. "No," he replied, "they shall wave while I live." When the fate of the ship was decided, his proud spirit was broken. He became delirious from excess of mental and bodily suffering. Whenever able to speak, he would exclaim, "Don't give up the ship!" an expression consecrated by his countrymen; and he uttered but few other words during the four days that he survived his defeat.

This victory was not achieved without loss. Of the crew of the Shannon, twenty-four were killed, and fifty-six wounded. Of that of the Chesapeake, forty-eight were killed, and nearly one hundred wounded. Great was the exultation of the enemy. Victories over the frigates of other nations, were occurrences too common to

excite emotion; but the capture of an American frigate was considered a glorious epoch in the naval history of Great Britain. The honours and rewards bestowed upon Captain Broke, were such as had never before been received but by the conqueror of a squadron. These demonstrations of triumph were inadvertent confessions of American superiority; and were, to the vanquished themselves, sources of triumph and consolation.

The next encounter at sea was between the American brig *Argus*, and the British brig *Pelican*. The latter was of superior force, and was victorious. Soon after, the American brig *Enterprise*, commanded by Lieutenant Burrows, captured the British brig *Boxer*, commanded by Captain Blyth. These vessels were of equal force, but the great effect of the fire of the *Enterprise*, furnished to the Americans another proof of the superior skill of their seamen. Both commanders were killed in the action, and were buried, each by the other's side, in Portland.

Commodore Porter had been cruising in the Pacific for nearly a year, in the course of which he had captured several British armed whale ships. Some of these were equipped as American cruisers and store ships; and the *Atlantic*, now called the *Essex Junior*, of twenty guns and sixty men, was assigned to Lieutenant Downes. The prizes which were to be laid up, were convoyed by this officer to Valparaiso. On his return he brought intelligence to Commodore Porter that a British squadron, consisting of one frigate, and two sloops of war, and a store ship of twenty guns, had sailed in quest of the *Essex*. The commodore took measures immediately to repair his vessel, which, having accomplished on the 12th of December, 1813, he sailed for Valparaiso, in company with the *Essex Junior*.

“It was not long after the arrival of Commodore Porter at Valparaiso, when Commodore Hillyar appeared there in the *Phœbe* frigate, accompanied by the *Cherub* sloop of war. These vessels had been equipped for the purpose of meeting the *Essex*, with picked crews, in prime order, and hoisted flags bearing the motto, ‘God and our country, British sailors’ best rights; *traitors offend them.*’

“ This was in allusion to Porter’s celebrated motto, *Free trade and sailor’s rights;*’ he now hoisted at his mizzen, ‘ God, our country, and liberty: tyrants offend them.’ On entering the harbour, the British commodore fell foul of the Essex, in such a situation as to be placed completely in the power of the latter; the forbearance of Commodore Porter was acknowledged by the English commander, and he passed his word and honour to observe the same regard to the neutrality of the port.

“ The British vessels soon after stood out, and cruised off the port about six weeks, rigorously blockading the Essex. Their united force amounted to eighty-one guns, and about five hundred men, about double that of the Essex; but the circumstance of this force being divided in two ships, rendered the disparity still greater, and was by no means counterbalanced by the Essex Junior. Commodore Porter being prevented, by this great disparity of force, from engaging, made repeated attempts to draw the *Phæbe* into action singly, either by manœuvring or sending formal challenges; but Commodore Hillyar carefully avoided the coming to action alone. The American commander, hearing that an additional British force was on its way, and having discovered that his vessel could outsail those of the British, determined to sail out, and, while the enemy was in chase, enable the Essex Junior to escape to a place of rendezvous previously appointed.

“ On the twenty-eighth of March, the wind coming on to blow fresh from the southward; the Essex parted her starboard cable, and dragging her larboard anchor to sea. Not a moment was lost in getting sail on the ship, as it was determined to seize this moment to escape. In endeavouring to pass to the windward of the enemy, a squall struck the American vessel, just as she was doubling the point, which carried away her main-topmast; both ships immediately gave chase, and being unable to escape in his crippled state, the commodore endeavoured to put back into the harbour; but finding this impracticable, he ran into a small bay, and anchored within pistol shot of the shore; where, from a supposition that the enemy would continue to respect the neutrality of the port, he thought himself secure. He soon found, however, by the manner

in which they approached, that he was mistaker. With all possible despatch, therefore, he prepared his ship for action, and endeavoured to get a spring on his cable, which he could not accomplish before the enemy commenced the attack, at fifty-four minutes past three.

“At first the *Phœbe* placed herself on his stern, and the *Cherub* on his larboard bow; but the latter soon finding herself exposed to a hot fire, changed her position, and with her consort, kept up a raking fire under his stern. The American, being unable to bring his broadside to bear on the enemy, his spring cables having been three times shot away, was obliged, therefore, to rely for defence against this tremendous attack, on three long twelve pounders, which he ran out of the stern ports, which were worked with such bravery and skill, as in half an hour to do so much injury to the enemy, as to compel them to haul off and repair.

“It was evident that Commodore Hillyar meant to risk nothing from the daring courage of the Americans; all his manœuvres were deliberate and wary; his antagonist was in his power, and his only concern was to succeed with as little loss to himself as possible. The situation of the *Essex* was most vexatious to our brave countrymen; many of whom were already killed and wounded, and from the crippled state of their ship, they were unable to bring her guns to bear upon the enemy. Her gallant crew were not disheartened; aroused to desperation, they expressed their defiance to the enemy, and their determination to hold out to the last.

“The enemy having repaired, now placed himself, with both ships, on the starboard quarter of the *Essex*, where none of her guns could be brought to bear; the commodore saw no hope but in getting under way; the flying jib was the only sail he could set; this he caused to be hoisted, cut his cable, and ran down on both ships, with the intention of laying the *Phœbe* on board. For a short time he was enabled to close with the enemy, and the firing was tremendous! the decks of the *Essex* were strewed with dead, and her cockpit filled with the wounded, she had been several times on fire, and was, in fact, a perfect wreck.

“At this moment, a feeble hope arose, that she might still be saved, in consequence of the Cherub being compelled to haul off on account of their crippled state; she, however, kept up her fire at a distance with her long guns. The Essex was unable, however, to take advantage of the circumstance, as the Phœbe edged off, and also kept up, at a distance, a destructive fire; the former being totally bereft of her sails, could not bring her to close quarters.

“Commodore Porter, finding the greater part of his crew disabled, at last gave up all hope, and attempted to run his vessel on shore, the wind at that moment favouring his design; but it suddenly changed, drove her close upon the Phœbe, exposing her to a raking fire. The ship was totally unmanageable, but as she drifted with her head to the enemy, Commodore Porter again seized a faint hope of being able to board. At this moment Lieutenant Downes came on board to receive orders, expecting that his commander would soon be a prisoner. His services could be of no avail in the present deplorable state of the Essex, and finding from the enemy's putting up his helm, that the last attempt at boarding would not succeed, Downes was directed to repair to his ship, to be prepared for defending and destroying her, in case of an attack.

“The slaughter on board the Essex now became horrible, the enemy continuing to rake her while she was unable to bring a single gun to bear. Still her commander refused to yield while a ray of hope appeared. Every expedient, that a fertile and inventive genius could suggest, was resorted to, in the forlorn hope, that he might be able, by some lucky chance, to escape from the grasp of the foe. A hawser was bent to the sheet anchor, and the anchor cut from the bows, to bring the ship's head around. This succeeded; the broadside of the Essex was again brought to bear; and, as the enemy was much crippled, and unable to hold his own, the commodore thought she might drift out of gunshot before he discovered that the Essex had anchored; but, alas! this last expedient failed; the hawser parted, and with it went the last lingering hope of the Essex.

“At this moment her situation was awful beyond descrip-

non. She was on fire both before and aft, the flames were bursting up her hatchway, a quantity of powder exploded below, and word was given that fire was near her magazine. Thus surrounded by horrors, without any chance of saving his ship, he turned his attention to the saving as many of his gallant companions as he could; the distance to the shore not exceeding three quarters of a mile, he hoped that many of them would save themselves before the ship blew up. His boats being cut up, they could only hope to escape by swimming; by some this was effected, but the greater part of his generous crew resolved to stay by the ship, and share the fate of their commander.

“They now laboured to extinguish the flames and succeeded; after this, they again repaired to their guns, but their strength had become so much exhausted, that this effort was in vain. Commodore Porter summoned a consultation of the officers of the divisions, when, to his astonishment, only one acting Lieutenant, Stephen Decatur M’Night, appeared. The accounts from every part of the ship were deplorable indeed; she was in imminent danger of sinking, and so crowded with the wounded, that even her birthdeck could hold no more, and several were killed under the surgeon’s hands. In the mean time, the enemy, at a secure distance, continued his fire; the water having become smooth, he struck the hull of the *Essex* at every shot.

“At last, despairing of saving his ship, the commodore was compelled, at twenty minutes past six, to give the painful orders to strike the colours. The enemy, probably not seeing that this had taken place, continued to fire for ten minutes after, and Porter was about to give orders that the colours should again be hoisted, under a belief that the enemy intended to give no quarters, when the firing ceased. The loss on board the *Essex* was fifty-eight killed, thirty-nine wounded severely, twenty-seven slightly, and thirty-one missing. The loss on board the British vessels was five killed and ten wounded; but they were both much cut up in their hulls and rigging; the *Phœbe* could scarcely be kept afloat until she anchored in the port of Valparaiso next morning.

“Commodore Porter was paroled, and permitted to return to the United States in the *Essex Junior*, which was converted into a cartel for the purpose. On arriving off the port of New-York, the vessel was detained by the *Saturn* razee, and, to the disgrace of the British navy, already dishonoured by the base attack upon this gallant officer, he was compelled to give up his parole, and declare himself a prisoner of war, and, as such, he informed the British officer that he would attempt his escape. In consequence of this threat, the *Essex Junior* was ordered to remain under the lee of the *Saturn*; but the next morning Commodore Porter put off in his boat, though thirty miles from shore, and notwithstanding the pursuit by those of the *Saturn*, arrived safely in New-York.”*

In the spring of 1814, Commodore Barney took the command of a small flotilla of gunboats, to protect the inlets and small rivers that fall into the Chesapeake Bay. About the 1st of June, the enemy entered the Chesapeake Bay, and renewed their ravages, with greater severity than they had done the last year. Sharp and frequent encounters took place, upon the water, and upon the land; but the enemy succeeded in laying waste the country, and carrying off the negroes, through the month of June and July.

In the midst of the various occurrences of the war, on the northern frontier, on the sea-board, and on the ocean, important preparations were making to the westward; and, although the spring and summer had passed away without any incident in this quarter worthy of being recorded, they had not passed inactive. The general attention was now turned towards it with much anxiety, and the armies of the Niagara and St. Lawrence remained almost with folded arms, awaiting the issue of Harrison's campaign, and the result of the contest for the mastership of Lake Erie.

The British, aware of the consequence of a defeat, had, with great assiduity, laboured to strengthen themselves. The reinforcements continually arriving at Fort George,

* Brackenridge.

were evidently destined to follow up the advantages which Proctor might gain, in conjunction with the commander on the lake. In the meanwhile, in the neighbouring states of Kentucky and Ohio, the people were excited in a most surprising degree; had it been necessary, they would have risen *en masse*; almost every man capable of bearing a musket, was anxious to march. The governor of Ohio had scarcely issued his proclamation, calling on volunteers, (for the obligations of law to render military service were no longer thought of,) than fifteen thousand men presented themselves, completely armed and equipped—more than five times the number required.

The venerable governor of Kentucky, Shelby, a revolutionary here, and the Nestor of the present war, made it known that he would put himself at the head of the injured citizens of that state, and lead them to seek revenge for the murder of their relatives and friends, but limited the number of volunteers to four thousand. The state of Kentucky, called by the natives, “the dark and bloody ground,” forty years ago was an uninhabited forest, possessed by no tribe of Indians, but, from time immemorial, the theatre of sanguinary wars. At this day, it blooms beneath the hand of agriculture, it is filled with beautiful towns and villages, and is the abode of peace, opulence, and refinement. The inhabitants are descended from the planters of Virginia and North Carolina, and emigrants, composed of the enterprising and intelligent of the other states.

Living in abundance, and at their ease, and more remote from the seats of commerce, they have imbibed less of foreign attachments or feelings than any of our people, and are, perhaps, more enthusiastically devoted to the institutions of freedom. They have not a little of the manners of chivalry in their generous and hospitable deportment. Fearless of danger, regarding dishonour more than death, but, with these qualities, a benevolence and humanity which has scarcely a parallel. Had the elder brethren of this confederacy acted like this younger member, the Canadas would have been ours, and Britain would never have dared to insult us with her unwarrantable pretensions.

The transactions which are now to be related, may justly rank amongst the most pleasing to our feelings and national pride, of any which took place during the contest. The campaign opened with an affair, which, though comparatively of smaller consequence than some others, is, in its circumstances, one of the most brilliant that occurred during the war. This was the unparalleled defence of Fort Sandusky, by a youth of twenty-one years of age. In August, and before the arrival of the Ohio and Kentucky volunteers, which did not take place until the following month, threatening movements had been made upon all the different forts established by the Americans on the rivers which fall into Lake Erie. After the siege of Fort Meigs, the British had been considerably reinforced by regulars, and an unusual number of Indians, under their great leader Tecumseh. It was all important to reduce these forts before the arrival of the volunteers.

Major Croghan, then commanding at Upper Sandusky, having received intimation that the enemy were about to invest the fort of Lower Sandusky, had marched to this place with some additional force, and had been occupied with great assiduity in placing it in the best posture of defence. But the only addition of importance which the time would allow him to make, was a ditch of six feet deep, and nine feet wide, outside the stockade of pickets, by which these hastily constructed forts are enclosed, but which can afford but a weak defence against artillery. He had but one six pounder, and about one hundred and sixty men, consisting of regulars, and detachments of the Pittsburgh and Petersburgh volunteers. General Harrison, not conceiving it practicable to defend the place, ordered young Croghan to retire on the approach of the enemy, after having destroyed the works. This, our young hero, taking the responsibility upon himself, determined to disobey.

On the first of August, General Proctor, having left a large body of Indians, under Tecumseh, to keep up the appearance of a siege of Fort Meigs, arrived at Sandusky with about five hundred regulars, seven hundred Indians, and some gun-boats. After the general had made such dispositions of his troops as to cut off the retreat of the

garrison, he sent a flag by Colonel Elliot and Major Chambers, demanding a surrender, accompanied with the usual base and detestable threats of butchery and cold blood massacre, if the garrison should hold out. A spirited answer was returned by Croghan, who found that all his companions, chiefly striplings like himself, would support him to the last.

When the flag returned, a brisk fire was opened from the gun-boats and howitzer, and which was kept up during the night. In the morning, they opened with three sixes, which had been planted under cover of the night, within two hundred and fifty yards of the pickets, but not with much effect. About four o'clock in the afternoon, it was discovered that the enemy had concentrated his fire against the northwest angle, with the intention of making a breach. This part was immediately strengthened by the apposition of bags of flour and sand, so that the pickets suffered but little injury. During this time, the six pounder was carefully concealed in the bastion, which covered the point to be assailed, and it was loaded with slugs and grape.

About five hundred of the enemy now advanced in close column to assail the part where it was supposed the pickets must have been injured : at the same time making several feints, to draw the attention of the besieged to other parts of the fort. Their force, being thus divided, a column of three hundred and fifty men, which were so enveloped in smoke as not to be seen until they approached within twenty paces of the lines, advanced rapidly to the assault. A fire of musketry from the fort, for a moment threw them into confusion, but they were quickly rallied by Colonel Short, their commander, who, now springing over the outer works into the ditch, commanded the rest to follow, crying out, "give the d——d Yankees no quarter!" Scarcely had these detestable words escaped his lips, and the greater part of his followers landed in the ditch, when the six pounder opened upon them a most destructive fire, killing and wounding the greater part, and amongst the first the wretched leader, who was sent into eternity before his words had died upon the air

A volley of musketry was, at the same time, fired upon those who had not ventured.

The officer who succeeded Short, exasperated at being thus treated by a few boys, formed his broken column, and again rushed to the ditch, where he, and those who dared to follow him, met with the same fate as their fellow soldiers. The small arms were again played on them—the whole British force was thrown into confusion; and, in spite of the exertions of their officers, fled to the woods, almost panic struck, whither they were soon followed by the Indians. Thus were these men, confident of success, and detestable in the intended use of victory, most signally chastised, under Providence, by a force scarce a tenth of their numbers. Terror indescribable took possession of the assailants, and they retreated towards their boats, scarcely daring to cast their eyes towards the fatal spot, while they were followed by their allies in sullen silence.

If this gallant defence deserves the applause of the brave, the subsequent conduct of the besieged deserves the praise of every friend of humanity. The scene which now ensued, deserves to be denominated sublime. The little band, forgetting in a moment that they had been assailed by merciless foes, who sought to massacre them, without regarding the laws of honourable war, now felt only the desire of relieving wounded men, and of administering comfort to the wretched. Had they been friends, had they been brothers, they could not have experienced a more tender solicitude.

The whole night was occupied in endeavouring to assuage their sufferings; provisions and buckets of water were handed over the pickets, and an opening was made, by which many of the sufferers were taken in, who were immediately supplied with surgical aid: and this, although a firing was kept up with small arms by the enemy, until some time in the night. The loss of the garrison amounted to one killed and seven wounded; that of the enemy, it is supposed, to be at least two hundred. Upwards of fifty were found in and about the ditch. It was discovered next morning, that the enemy had hastily retreated, leaving a boat, and a considerable quantity of military stores

Oliver Hazard Perry.

Daniel Boone.

Upwards of seventy stand of arms were taken, besides a quantity of ammunition. The Americans were engaged during the day, in burying the dead with the honours of war, and providing for the wounded.

This exploit called forth the admiration of every party in the United States. Croghan, together with his companions, Captain Hunter, and Lieutenants Johnson, Bayley, and Meeks, of the seventeenth; Anthony, of the twenty-fourth; and ensigns Ship and Duncan, of the seventeenth, together with the other officers and volunteers, were highly complimented by the general. They afterwards received the thanks of Congress. Croghan was promoted to the rank of lieutenant-colonel, and presented with an elegant sword by the ladies of Chilicothe.

Soon after this affair, Tecumseh raised the siege of fort Meigs, and followed Proctor to Detroit; all hope was now given up by the enemy of reducing these forts, until they could gain the ascendancy on the lake.

The utmost exertions had been made in the meanwhile by Captain Perry, to complete the naval armament on Lake Erie. By the 4th of August, the fleet was completed; but several of the vessels were with difficulty got over the bar, on which there are but five feet water. He sailed in quest of the enemy, but not meeting him, returned on the 8th, and after receiving a reinforcement of sailors, brought by Captain Elliot, sailed again on the 12th, and on the 15th anchored in the bay of Sandusky. Here, after taking in about twenty volunteer marines, he again went in quest of the enemy; and after cruising off Malden, returned to Put-in-bay, a distance of thirty miles.

His fleet consisted of the brig Lawrence, of 20 guns; the Niagara, Captain Elliot, of twenty; the Caledonia, Lieutenant Turner, three; the schooner Ariel, of four; the Scorpion, of two; the Somers of two, and two swivels; the sloop Trippe, and schooners Tygress and Porcupine, of one gun each; making a fleet of nine vessels and fifty-four guns. On the morning of the 10th of September, the enemy was discovered bearing down upon the American squadron, which immediately got under weigh, and stood out to meet him.

Superiority was decidedly in favour of the British; the

Americans had three more vessels, but this was much more than counterbalanced by the size of those of the enemy, and the number of their guns. Their fleet consisted of the *Detroit*, Captain Barclay, of nineteen guns, and two howitzers; the *Queen Charlotte*, of seventeen guns, Captain Finnis; the schooner *Lady Provost*, Lieutenant Buchan, of thirteen guns, and two howitzers; the brig *Hunter*, of ten guns; the sloop *Little Belt*, of three; and the schooner *Chippewa*, of one gun and two swivels; in all, six vessels and sixty-three guns.

When the Americans stood out, the British fleet had the weather gage; but the wind soon after changed, and brought the American fleet to windward. The line of battle was formed at eleven, and fifteen minutes before twelve, the enemy's flag ship, the *Queen Charlotte*, opened her fire upon the *Lawrence*, which she sustained for ten minutes, before she could approach near enough for her carronades to return. She therefore bore up, making signals for the other vessels to hasten to her support, and about twelve, brought her guns to bear upon the enemy.

Unfortunately, the wind being too light, the remainder of the squadron could not be brought up to her assistance, and she was compelled to contend, for two hours, with two ships of equal force. The contest was, notwithstanding, kept up with unshaken courage, and a degree of coolness which deserves admiration. By this time the brig, which had so long borne the brunt of the whole of the British force, had become entirely unmanageable; every gun was dismounted, and, with the exception of four or five, her whole crew either killed or wounded. Perry now, with admirable presence of mind, and which drew forth the praise of the gallant officer to whom he was opposed, resolved to shift his flag, leaped into his boat, and heroically waving his sword, passed unhurt to the *Niagara*.

At the moment he reached the *Niagara*, he saw with anguish the flag of his ship come down; she was utterly unable to make further resistance, and it would have been a wanton waste of the remaining lives to continue the contest; the enemy was not able to take possession of

her. Captain Elliot, seconding the design of the commodore, volunteered to bring up the rest of the fleet; for at this critical moment the wind had providentially increased. Perry now bore down upon the enemy with a fresh ship; and passing ahead of the *Detroit*, *Queen Charlotte*, and *Lady Provost*, poured a destructive broadside into each from his starboard, and from his larboard into the *Chippewa* and *Little Belt*. In this manner, cutting through the line, he was within pistol shot of the *Lady Provost*, which received so heavy a fire as to compel her men to run below. At this moment the *Caledonia* came up, and opened her fire; several others of the squadron were enabled soon after to do the same. For a time, this novel and important combat mingled with indescribable violence and fury.

The issue of a campaign, the mastery of a sea, the glory and renown of two rival nations, matched for the first time in squadron, were the incentives to the contest. But it was not long before the scale turned in favour of Perry, and his ship, the *Lawrence*, was again enabled to hoist her flag. The *Queen Charlotte*, having lost her captain and all her principal officers, by some mischance ran foul of the *Detroit*, and the greater part of the guns of both ships were rendered useless. They were now compelled to sustain, in turn, an incessant fire from the *Niagara*, and the other vessels of the squadron. The flag of Captain Barclay was soon after struck, and those of the *Queen Charlotte*, the *Lady Provost*, the *Hunter*, and the *Chippewa*, came down in succession; the *Little Belt* attempted to escape, but was pursued by two gun boats and captured.

Thus, after a contest of three hours, was this unparalleled naval victory achieved, in which every vessel of the enemy was captured, the first occurrence of the kind ever recorded. If any thing could heighten this glorious victory, it was the modest and yet sublime manner in which it was announced by the incomparable Perry: WE HAVE MET THE ENEMY, AND THEY ARE OURS. Britain had been beaten in single combat—she was now beaten in squadron, where she had conceived herself invincible. The loss in this bloody affair was very great, in proportion to

the numbers engaged. The Americans had twenty-seven killed, and ninety-six wounded; amongst the first were Lieutenant Brooks, of the marines, and Midshipman Laub; amongst the latter were Lieutenant Yarnell, sailing-master Taylor, purser Hamilton, and Midshipmen Claxton and Swartwout.

The loss of the British was about two hundred in killed and wounded; and the number of prisoners amounted to six hundred, exceeding the whole number of the Americans. Commodore Barclay, a gallant officer, who had lost an arm at the battle of Trafalgar, was severely wounded, and the loss of officers, on the side of the British, was unusually great. Among the officers particularly spoken of on this occasion, were Captain Elliot, Lieutenants Turner, Edwards, Forest, Clark, and Cummings, besides those already mentioned.

The victory of Commodore Perry left the Americans in peaceable possession of Lake Erie, but Detroit and Malden still remained in possession of the British. The triumph of the American arms seemed to unite conflicting parties; and the kindness extended to the British captives, reflected the brightest glory on our country. But the territory still occupied by the enemy was to be retaken. For the accomplishment of this purpose, Colonel Johnson, with a body of his faithful Kentuckians, were destined to act against Detroit, and General Harrison was to march against Malden.

Finding Malden untenable, the British general destroyed, and then evacuated it. On the 2d of October, General Harrison, with about 3,500 men, commenced a pursuit, and on the 5th, the enemy was overtaken. Colonel Johnson, who had formed a junction with General Harrison, was sent forward to reconnoitre the British and Indian forces, gave intelligence that the enemy were prepared for action, at the distance of a few miles. On their left was the river, and their right consisting of Indians, under Tecumseh, rested on a swamp.

The American force consisted of Ohio militia, and four thousand Kentuckians, the flower of their state, commanded by Governor Shelby, who arrived at the camp of General Harrison on the 7th of September. When the

troops approached the River Raisin, which had been the scene to such wanton barbarities, they halted to contemplate for a while the tragic spot. With feelings which language must fail to describe, they gathered up the undistinguishable bones of friends and foes, and consigned them to one common grave, with affecting demonstrations of grief.

The enemy was drawn up under cover of the beech trees by which the narrow strip of land was covered. The Americans were soon formed in battle array. General Trotter's brigade formed the front line, supported by Desha's divisions on the left. The brigade of General King formed the second line, in rear of General Trotter's, and Chile's acted as a corps of reserve, both under the command of Major General Henry. The brigades averaged five hundred men each. Governor Shelby occupied the angle formed by the brigades of Trotter and Desha. The regular troops, numbering only one hundred and twenty men, were formed into columns, and occupied the narrow space between the river and the road, for the purpose of seizing the artillery, should the enemy be repulsed. The order of General Harrison was, to form Colonel Johnson's mounted men in two lines, in front of the Indians, but the underwood being too close for cavalry to be effective, he determined on a new mode of attack.

Knowing the dexterity of the backwoodsmen in riding through forests, and the little inconvenience to them of carrying their rifles in such a situation, he determined to refuse his left to the Indians, and charge on the regulars drawn up among the beech trees; the mounted regiment was accordingly drawn up in front. The army moved on but a short distance in this way, when the mounted men received the enemy's fire, and were instantly ordered to charge. The horses in front of the column at first recoiled from the fire, but soon after got in motion, and immediately at full speed broke through the enemy with irresistible force. In one minute the contest was over in front. The mounted men instantly formed in the rear, and poured a destructive fire, and were about to make another charge, when the British officers, finding it impossible to form their broken ranks, immediately surrendered.

Upon the left the onset was begun by Tecumseh with great fury. Colonel R. M. Johnson, who commanded on that flank of his regiment, received a galling fire, which he returned with effect, while the Indians advanced towards the point occupied by Governor Shelby; and at first made an impression on it; but the aged warrior brought a regiment to its support. The combat now raged with increasing fury; the Indians, to the number of twelve or fifteen hundred, seemed determined to maintain their ground to the last.

The terrible voice of Tecumseh could be distinctly heard encouraging his warriors; and although beset on every side, excepting on that of the morass, they fought with more determined courage than had ever been witnessed in these people. An incident soon occurred, however, which decided the contest. Colonel Johnson rushed towards the spot where the warriors, clustering around their undaunted chief, appeared resolved to perish by his side; in a moment a hundred rifles were aimed at the American, whose uniform, and white horse which he rode, rendered a conspicuous object; his holsters, dress, and accoutrements, were pierced with bullets, his horse and himself receiving a number of wounds. At the instant his horse was about to sink under him, the daring Kentuckian, covered with blood from his wounds, was discovered by Tecumseh; the chief having discharged his rifle, sprang forward with his tomahawk, but struck with the appearance of the warrior who stood before him, hesitated for a moment, and that moment was his last. The Kentuckian levelled a pistol at his breast, and they both, almost at the same instant, fell to the ground. The Kentuckians rushed forward to the rescue of their leader, and the Indians, no longer hearing the voice of Tecumseh, soon after fled. Near the spot where this scene occurred, thirty Indians were found dead, and six whites.

Thus fell Tecumseh the most celebrated Indian warrior that ever raised the tomahawk against us, and with him fell the last hope of our Indian enemies. This mighty warrior was the determined foe of civilization, and had for years been labouring to unite all the Indian tribes in opposing the progress of the settlements to the west.

ward. Had such a man opposed the European colonists on their first arrival, this continent, in all probability, would still have been a wilderness. To those who prefer a savage, uncultivated waste, inhabited by wolves and panthers, and by men more savage still, to the busy city, to the peaceful hamlet and cottage, to science and the comforts of civilization, to such it may be a source of regret that Tecumseh came too late.

But if the cultivation of the earth, and the cultivation of the human intellect and the human virtues, are agreeable in the sight of the Creator, it may be a just cause of felicitation that this champion of barbarism was the ally of Great Britain, at a period when he could only draw down destruction on his own head, by savagely daring what was beyond his strength. But Tecumseh fell, respected by his enemies as a great and magnanimous chief. Although he seldom took prisoners in battle, he treated well those that had been taken by others; and at the defeat of Dudley, actually put to death a chief whom he found engaged in the work of massacre. He had been in almost every engagement with the whites since Harmer's defeat, although, at his death, he scarcely exceeded forty years of age.

Tecumseh had received the stamp of greatness from the hand of nature, and had his lot been cast in a different state of society, he would have shone as one of the most distinguished of men. He was endowed with a powerful mind, with the soul of a hero. There was an uncommon dignity in his countenance and manners; by the former he could be easily discovered even after death, among the rest of the slain, for he wore no insignia of distinction. When girded with a silk sash, and told by General Proctor that he was made a brigadier in the British service, for his conduct at Brownstown and Magagua, he returned the present with respectful contempt. Born with no title to command but his native greatness, every tribe yielded submission to him at once, and no one ever disputed his precedence. Subtle and fierce in war, he possessed uncommon eloquence,—his speeches might bear a comparison with those of the most celebrated orators of Greece and Rome. His invective was terrible, as we had

frequent occasion to experience, and as may be seen in the reproaches which he applied to Proctor, a few days before his death, in a speech which was found amongst the papers of the British officers. His form was uncommonly elegant, his stature about six feet, his limbs perfectly proportioned. He was honourably interred by the victors, by whom he was held in much respect, as an inveterate, but a magnanimous enemy.

The loss of the Americans, in this engagement, was more than fifty killed and wounded, among whom was Colonel Whitely, a revolutionary soldier, killed. The loss of the British was nineteen killed, and fifty wounded. Six hundred were taken prisoners; of the Indians, one hundred and twenty were left on the field. Several pieces of cannon, taken in the revolution, and which had been surrendered by General Hull, were trophies of this victory. General Proctor fled when the charge was made, and escaped down the Thames, by means of fleet horses, though closely pursued. His carriage, together with his private papers, was left in his haste to retreat.

The time was now come, which would prove whether the stigma past upon the chivalrous people of Kentucky, by the infamous Proctor, in order that his own atrocious conduct might escape notice, was founded in truth. It was now seen whether, to use the words of this monster, they were a "ferocious and mortal foe, using the same mode of warfare with the allies of Britain." The recollection of the affair of the River Raisin might have justified revenge: and what is more, the instruments who perpetrated those horrid deeds were now at their disposal; bereft of hope by this signal defeat, and the loss of their great leader, the savages sued for peace; and as an earnest of their sincerity, offered to raise their tomahawks on the side of the United States, and to inflict upon the British prisoners, the same abominable cruelties they had practised on the Americans.

But the Kentuckians, to their honour, far from giving way to the passions of revenge, forebore even a word, or look of insult; there was not even an allusion to the murder of their brothers and friends; the prisoners were distributed in small parties, in the interior towns, and al

though extremely insulting in their deportment, were not merely treated with humanity, but in many places actually caressed and fed with dainties by the compassionate inhabitants. This treatment was carried to an excess, which might properly deserve the name of folly, were it not a noble mode of revenge for what our countrymen at that moment endured in the British dungeons on the land, and in the floating prisons on the sea, where they underwent every species of distress, wretchedness, and torture.

The Indian war now ceased, and our frontier rested in security. Most of the volunteers returned home. General Harrison stationed General Cass at Detroit, with about one thousand men, and proceeded with the remainder to join the central army at Buffalo. About this time, at the request of General Vincent, a correspondence was opened between him and General Harrison, relative to the treatment of the British prisoners. After assuring the British general that the request to treat his prisoners with humanity, was unnecessary, he referred him to the treatment experienced by American captives, and referred him to the scenes which had transpired at the River Raisin, the Miami, others of a similar complexion, and wished to be informed whether the Indians should be permitted to repeat those cruelties. His words are worthy of remembrance.

“Use, then, I pray you, your authority and influence to stop the dreadful effusion of innocent blood which proceeds from the employment of those savage monsters, whose aid, as must now be discovered, is so little to be depended on when most wanted, and which can have so trifling an effect on the issue of war. The effect of their barbarities will not be confined to the present generation. Ages yet to come will feel the deep rooted hatred and enmity which they must produce between the two nations.”

The reply of General Vincent was not unlike that of Sir Sidney Beckwith, vague and evasive. He expressed himself perfectly satisfied on the score of the treatment of the prisoners, but, with respect to the other topics, he declined saying any thing; it was beyond his power to give an explicit answer; but he pledged his honour, that,

to the utmost of his power, he would join with General Harrison in alleviating the calamities of war. Although General Harrison pledged himself to produce proofs of every thing which he stated, General Vincent chose to be silent upon the subject; neither disavowing that such acts were sanctioned by the British government, nor calling the truth of them in question.

The successes of the northwestern army, and the victory on Lake Erie, prepared the way for the invasion of Canada. A more formidable force was collected on the frontier than heretofore, under more experienced officers, and the Indians had declared against the enemy. The public mind was elated, and a fit opportunity presented for the invasion of Canada.

General Armstrong was at the head of the war department, and much was expected from his experience and zeal. Improvements were introduced, especially in the selection of officers. The secretary proceeded to the northern frontier to put his plans into operation. The plan was, perhaps, judicious, but the season was too far advanced to accomplish his intentions.

General Dearborn resigned, and General Wilkinson was called from the southern army to supply his place. He issued an order, which gave general satisfaction, and much was expected from his military science. The force directly under his command, amounted to eight thousand men, and he expected to be joined in October by the force under General Harrison. General Hampton commanded about four thousand men at Plattsburg. The plan was, to descend the St. Lawrence, pass the British posts above, form a junction with General Hampton, and invade Montreal.

The army, which had been distributed in different corps, and stationed at various points, was now to be concentrated at some place most convenient for its embarkation. For this purpose Grenadier's Island, which lies between Sackett's Harbour and Kingston, was selected on account of its contiguity to the St. Lawrence, as the most proper place of rendezvous. On the second of October, General Wilkinson left Fort George, with the principal body of the troops, and soon reached the island, where

he occupied himself incessantly in making the necessary preparations for the prosecution of his enterprise. He several times visited Sackett's Harbour, at which place the troops first arrived, and, after receiving their necessary supplies, proceeded to the place of rendezvous. Colonel Scott, whom he had left in command at Fort George, was ordered to embark with his regiment of artillery, and Colonel Randolph's infantry, on board a vessel of the squadron, and proceed to the island. Colonel Dennis was left in the command of Sackett's Harbour; and the general having provided a sufficient number of boats to transport the artillery through the St. Lawrence, proceeded to put the troops in motion. By the twenty-third, the troops thus collected exceeded seven thousand men, and were composed of Colonel Porter's light artillery, a few companies of Colonel Scott's and Macomb's regiments of artillery, twelve regiments of infantry, and Forsythe's rifle corps.

General Brown, now a brigadier in the service of the United States, was ordered to take the command of the advance of the army at this place. On the first of November, a British squadron made its appearance near French Creek, with a large body of infantry; a battery of three eighteen pounders, skilfully managed by Captains M'Pherson and Fanning, soon forced them to retire. The attack was renewed the next morning, but with no better success; and as the other corps of the army now daily arrived, the enemy thought proper to move off.

On the sixth the army was put in motion, and in the evening landed a few miles above the British fort Prescott. After reconnoitering the passage at this place, and finding that the fort commanded the river, General Wilkinson directed the fixed ammunition to be transported by land to a safe point below, and determined to take advantage of the night to pass with the flotilla, while the troops were marched to the same point, leaving on board the boats merely a sufficient number to navigate them. Availing himself of a heavy fog which came on in the evening, the commander endeavoured to pass the fort unobserved; but, the weather clearing up, and the moon

shining, he was discovered by the enemy, who opened a heavy fire.

General Brown, who was in the rear with the flotilla thought it prudent to land for the present, until the night should grow darker. He then proceeded down the river, but not without being discovered, and again exposed to a severe cannonade: notwithstanding which, not one of three hundred boats suffered the slightest injury. Before ten o'clock the next day, they had all safely arrived at the place of destination. A messenger was now despatched to General Hampton, informing him of the movement of the army, and requiring his co-operation.

The enemy having discovered the design of the Americans, determined to counteract it. Parties were posted where they could annoy our boats by musket shot, and the illness of the commander in chief augmented alarmingly.

The army was delayed for half a day in extricating two schooners loaded with provisions, which had been driven into a part of the river near Ogdensburgh, by the enemy's fire. A corps d'elite of twelve hundred men, under Colonel Macomb, being despatched to remove the obstructions to the descent of the army, at three o'clock he was followed by the main body. On passing the first rapids of the St. Lawrence, the barge of the commander in chief was assailed by two pieces of artillery, but without any other injury than cutting the rigging. The attention of the enemy was soon diverted by Lieutenant Colonel Eustis, who returned their fire from some light barges, while Major Forsythe, at the same time, landed some of his riflemen, attacked them unexpectedly, and carried off three pieces of their artillery. The flotilla came to about six miles below, and the dragoons attached to the first divisions of the enemy, had been collected at a place called the White House, at a contraction of the river; to which point the flotilla was ordered the next morning to proceed. On arriving at this place on the eighth, General Brown was ordered to go forward with his brigade, to reinforce Colonel Macomb, and take command of the advance, while the commander in chief directed the transportation of the dragoons

across the St. Lawrence. The last was completed during the night.

The British now determined to harass the Americans. On the 9th, a skirmish occurred between the American riflemen and a party of militia and Indians. In the course of the day, the cavalry and four pieces of artillery, under Captain M'Pherson, were ordered to clear the coast as far as the head of the *Longue Saut*; and in the evening the army arrived at the place called the Yellow House, which stands near the Saut. As the passage of this place was attended with considerable difficulty, on account of the rapidity of the current and of its length, it was deemed prudent to wait until the next day, and in the meanwhile it became necessary to use the utmost precaution.

On the morning of the tenth, General Brown, with the troops under his command, excepting two pieces of artillery, and the second regiment of dragoons, was ordered to march in the advance of the army. A regard for the safety of the men, had induced the commander in chief to retain as few of the troops in the boats as possible, on account of the exposure to which they would be subject, in the long and dangerous passage of these rapids, and where the enemy had in all probability established batteries for the purpose of impeding their descent. The second regiment of dragoons, and a considerable portion of the other brigades, which had been withdrawn from the boats, were ordered to follow, under General Boyd, the steps of General Brown, to prevent the enemy, who were still hanging on the rear of the army, from making any advantageous attack.

General Brown now commenced his march at the head of his troops, consisting principally of Colonel Macomb's artillery, and a part of Scott's regiment of light artillery, the riflemen, and the sixth, fifteenth, and twenty-second regiments. It was not long before he found himself engaged with a strong party at a block house near the Saut, which, after a contest of a few minutes, was repulsed by the riflemen under Forsythe, who was severely wounded.

About the same time, some of the enemy's galleys approached the flotilla, which had landed, and commenced a fire upon it, by which a number of boats were injured;

two eighteen pounders, however, being hastily run on shore, a fire from them soon compelled the assailants to retire. The day being now too far spent to attempt the Saut, it was resolved to postpone it until the day following.

At ten o'clock on the eleventh, at the moment that the flotilla was about to proceed, and when, at the same time, the division under General Boyd, consisting of his own, and the brigades of Generals Covington and Swartwout, were drawn up in marching order, an alarm was given, that the enemy was discovered approaching in column. The commander in chief and General Lewis, being both too much indisposed to take the command, General Boyd was ordered to face about and attack the approaching army.

The enemy's galleys had at the same time approached for the purpose of attacking the rear of the American flotilla. General Boyd now advanced with his detachment formed in three columns, and ordered a part of General Swartwout's brigade to move forward, and bring the enemy to action. Colonel Ripley, accordingly, at the head of the 21st regiment, passed the wood which skirts the open ground called Chrystler's field, and drove in several of the enemy's parties. On entering the field, he met the advance of the British, consisting of the forty-ninth and the Glengary fencibles. Colonel Ripley immediately ordered a charge, which was executed with surprising firmness, so that these two regiments, nearly double his numbers, were compelled to retire; and on making a stand, were a second time driven before the bayonet, and compelled to pass over the ravines and fences, by which the field was intersected, until they fell on their main body.

General Covington had, before this, advanced upon the right of the enemy, where his artillery was posted; and at the moment Colonel Ripley had assailed the left flank, the right was forced by a determined onset, and success appeared scarcely doubtful. Unfortunately, however, General Covington, whose activity had rendered him conspicuous, became a mark for the sharp shooters of the enemy, stationed in Chrystler's house, and he was shot from his horse. The fall of this gallant officer arrested the progress of the brigade, and the artillery of the ene-

ly threw it into confusion, and caused it to fall back in disorder. The British commander now wheeled part of his line into column, with the view of capturing some pieces of artillery, which were no longer supported. A body of dragoons, under the Adjutant-General Walbach, attempted, in a very gallant manner, to charge the British column, but from the nature of the ground was not successful.

At this critical moment, Colonel Ripley, who had been engaged with the enemy's left flank, threw his regiment between the artillery and the advancing column, and frustrated their design. The British fell back with precipitation. The regiments which had broken, had not retired from the field, but still continued to keep up an irregular fight with various success; and the twenty-first having by this time expended its ammunition, and being much exposed, was withdrawn to another position, and in the meanwhile the enemy again attempted to possess themselves of the artillery. One piece was unfortunately captured by them, in consequence of the death of Lieutenant William S. Smith, who commanded it; the others were brought off by the coolness and bravery of Captain Armstrong Irvine. The action soon after ceased, having been kept up for two hours, by little better than raw troops against an equal number of veterans. The British force consisted of detachments from the forty-ninth, eighty-fourth, hundred and fourth, the Voltigeurs, and the Glen-gary regiment. The enemy soon after retired to their camp, and the Americans to their boats.

In this battle, the loss of the Americans in killed and wounded, amounted to three hundred and thirty-nine, of whom one hundred and two were killed; among these were Lieutenants Smith, Hunter, and Olmstead: among the wounded were General Covington, who afterwards died; Colonel Preston; Majors Chambers, Noon, and Cummings; Captains Townsend, Foster, Myers, Campbell, and Murdock; and Lieutenants Heaton, Williams, Lynch, Pelham, Brown, and Creery. The British loss could not have been less than that of the Americans.

This appears to have been a drawn battle; the British and Americans both leaving the ground. On the 11th,

the army joined the advance near Barnhart. The commander in chief received information from General Hampton, which put an end to the design against Montreal.

On the sixth, a few days before the battle of Chrystler's field, the commander in chief had given orders to General Hampton to meet him at St. Regis; but soon after this order, a letter was received from General Hampton, in which, after stating that from the disclosure of the state of General Wilkinson's supply of provisions, and the situation of the roads to St. Regis, which rendered it impossible to transport a greater quantity than could be carried by a man on his back, he had determined to open a communication from Plattsburgh to Conewago, or by any other point on the St. Lawrence, which the commander in chief might indicate.

General Hampton, some time before this, with a view to a further movement of troops, had descended the Chateaugay river, about the same time that the army was concentrated on Lake Ontario. Sir George Prevost, perceiving this movement towards Montreal, had collected all his force at this point to oppose the march of Hampton. On the twenty-first of October, this officer crossed the line, but soon found his road obstructed by fallen timber, and the ambuscade of the enemy's militia and Indians. A wood of considerable extent would have to be passed, before they could reach the open country; and while the engineers were engaged in cutting their way through, Colonel Purdy was detached with the light troops, and one regiment of the line, to turn their flank, and then seize on the open country below. In this he succeeded, and the army by the next day reached the position of the advance.

But it was discovered, that about seven miles further there was a wood which had been felled, and formed into an abattis, and that a succession of breastworks, some of them well supplied with artillery, had been formed by the main body of the enemy. Colonel Purdy, on the 25th, was ordered to march down the river on the opposite side, and, on passing the enemy, to cross over, and attack him in his rear, whilst the brigade under General Izard would attack him in front. Colonel Purdy had not march

ed far when his orders were countermanded ; but, on his return, he was attacked by the enemy's infantry and Indians, and at first thrown into confusion, but the assailants were soon after repulsed ; they came out at the same moment in front, and attacked General Izard, but were compelled to retire behind their defences.

General Hampton, finding that the enemy was gaining strength, determined to retreat. A council of officers was called by the commander in chief, and the army retired to winter quarters at French Mills.

Thus determined a campaign which gave rise to dissatisfaction, proportioned to the high expectations which had been indulged ; this unexpected turn of affairs appeared to cast a shade upon all the brilliant series of success which had preceded. Opinion was much divided as to the causes of the failure, and as to the parties who ought to bear the blame.

While these things were taking place on the land, the commander of our squadron on the lake was not idle. Commodore Chauncey, it has been seen, after his first attempt to bring the enemy to action, returned to Sackett's Harbour, for the purpose of obtaining a fresh supply of provisions. After being reinforced by a new schooner, he again sailed on a cruise ; and, on the seventh of September, discovered the British squadron near the Niagara, and immediately stood for it. Sir James, on perceiving the Americans, made sail to the northward, and was pursued during four days and nights ; but owing to the dull sailing of a greater part of the pursuers, he was enabled to keep out of their reach.

On the fourth day, off Genessee River, Commodore Chauncey, having a breeze, while Sir James lay becalmed, endeavoured to close with him ; this he was not able to accomplish, the enemy taking the breeze also, when the American squadron had approached within half a mile. After a running fight of more than three hours, the British escaped, but the next morning ran into Amherst Bay, whither the American commodore, for want of a pilot, did not think it prudent to follow, but contented himself with forming a blockade. In the running fight the British sustained considerable injury ; that of the Americans

was very trifling. The blockade was continued until the seventeenth of September, when, in consequence of a heavy gale which blew from the westward, the commodore was compelled to leave his station, and the British escaped into Kingston.

After remaining but a short time in Sackett's Harbour, Commodore Chauncey again sailed towards Niagara, where he arrived on the 24th, having passed Sir James at the False Ducks, without noticing him, intending to draw him into the lake. A few days after, the American commodore received information, that the enemy was in the harbour of York; he, therefore, made sail to that place, as fast as his dull sailing schooners would permit; and, on the twenty-seventh, early in the morning, discovered the enemy in motion in the bay, and immediately stood for him. This being perceived by Sir James, he stood out, and endeavoured to escape to the southward, but finding that the American was close upon him, tacked his squadron in succession, and commenced a well directed fire at the Pike, in order to cover his rear, and attacking the rear of his opponent as he passed to leeward; this was prevented by the skilful manœuvring of Chauncey, by bearing down in line on the centre of the enemy's squadron, which was thrown into confusion; Yeo immediately bore away, but not before his ship had been roughly handled by that of the commodore. In twenty minutes, the main and mizentopmast, and mainyard of the Wolfe, were shot away; the British commander set sail upon his foremast, and keeping dead before the wind, was enabled to outsail the greater part of Chauncey's squadron. The chase was continued until three o'clock, the Pike having the Asp in tow, and, during the greater part of this time, reach of the enemy's shot. Captain Crane, in the *Mauison*, and Lieutenant Brown, of the *Oneida*, used every exertion to close with the enemy, but without success. The chase was at length reluctantly given up, as it came on to blow almost a gale, and there was no hope of closing with the enemy before he could reach the British batteries, and without great risk of running ashore. The commodore was justly entitled to claim a victory in this affair; although the enemy were not captured, they were

certainly beaten; two of his vessels were at one moment completely in the commodore's power; but from his eagerness to close with the whole fleet, they effected their escape. In addition to the general policy of Sir James Yeo, the late affair on Lake Erie had rendered him particularly careful to avoid an engagement. The loss on board the Pike was considerable, owing to her having been so long exposed to the fire of the enemy's fleet; the most serious, however, was occasioned by the bursting of one of her guns, by which twenty-two men were killed and wounded; the total amounted to twenty-seven. The vessel was a good deal cut up in her hull and rigging.

Shortly after this affair, the commodore having communicated with General Wilkinson on the subject of the expedition then on foot, was advised to continue to watch the enemy's squadron; and, if possible, to prevent its return to Kingston. About the beginning of October, the commodore again chased the enemy's fleet for several days, and forced it to take refuge in Burlington Bay; the next morning, on sending the Lady of the Lake to reconnoitre, it was discovered that Sir James had taken advantage of the darkness of night, and escaped to Kingston. Much pleasantry was indulged at this time, at the shyness of the British knight, and his ungallant escape from the Lady of the Lake. The chase was now renewed, and, favoured by the wind, the commodore came in sight of seven schooners, and captured five of them, in spite of their efforts to escape by separating. Before sundown, three of them struck to the Pike, and another to the Sylph and the Lady of the Lake, and a fifth was afterwards captured by the Sylph. They turned out to be gun vessels, bound to the head of the lake as transports. Two of them were the Julia and Growler, which had been lost by the Americans. On board were three hundred soldiers belonging to the De Watteville regiment. It was ascertained that the ship of Sir James Yeo, and the Royal George, had suffered very considerable injury, as well as loss in killed and wounded. Commodore Chauncey remained master of the lake during the remainder of the season.

The consequence of leaving a large force of the enemy in the rear, and withdrawing the troops from Niagara were soon felt. General Harrison arrived at Buffalo soon after the departure of the commander in chief, but could not follow for want of transports. He embarked after the main body had gone into winter quarters. The fort was left under command of General M'Clure, who commanded militia whose term of service had nearly expired. This force was soon reduced to a handful of men, and the place was no longer tenable. The enemy was in march with a large force. The fort was blown up, and the few troops crossed the river, just in time to escape the British. But this retreat was preceded by an act which every American ought to condemn. Newark, a handsome little village, near the fort, would greatly favour a besieging army; and orders were given by the secretary, that if necessary for the *defence* of the fort, the village should be destroyed, to prevent the enemy from taking shelter in it. By an astonishing misconception of these orders, the general gave notice to the inhabitants to retire, and left the village in flames. The act was promptly disavowed by the government. The order, so misconceived, was soon enclosed to Sir George Prevost, expressing regret, and declaring the act unauthorized.

Sir George Prevost, however, did not wait for the disavowal of the American government; he had already inflicted a retaliation sufficient to satisfy the vengeance of the fiercest enemy. At daylight, on the nineteenth of December, Fort Niagara was surprised by Colonel Murray, with about four hundred men; and the garrison, nearly three hundred in number, and principally invalids, was put to the sword; not more than twenty being able to escape. The commanding officer, Captain Leonard, appears to have been shamefully negligent, or perhaps bought by the enemy: he was absent at the time, and had used no precautions against an assault. Having possessed themselves of this place, they soon after increased their force, and immediately proceeded to lay waste the Niagara frontier with fire and sword. The militia, hastily collected, could oppose no resistance to a large body of British regulars and seven hundred Indians. A spirited,

but unavailing attempt, was made by Major Bennett to defend Lewistown; this village, together with that of Manchester, Young's Town, and the Indian village of the Tuscaroras, were speedily reduced to ashes, and many of the inhabitants butchered.

Major Mellory advanced from Slosser, to oppose the invaders, but was compelled by superior numbers to retreat. On the thirtieth, a detachment landed at Black Rock, and proceeded to Buffalo; General Hall had organized a body of militia, but on the approach of the enemy, they could not be induced to hold their ground. Great exertions were made by Majors Staunton and Norton, and Lieutenant Riddle, but to no purpose. The village was soon after reduced to ashes, and the whole frontier, for many miles, exhibited a scene of ruin and devastation. Here was indeed ample vengeance for the burning of Newark. Even the British general was satisfied, as appears by his proclamation of the twelfth of January: "the opportunity of punishment has occurred, and *a full measure of retribution has taken place*:" and he declared his intention of "pursuing no further a system of warfare so revolting to his own feelings, and so little congenial to the British character."

We think indeed it was time to stop, and we are well persuaded that those who venerate the *lex talionis*, must be satisfied that the measure of vindictive vengeance was full to overflowing.

About this time a very interesting subject was submitted to the consideration of congress. Twenty-three American soldiers taken at the battle of Queenstown, in the autumn of 1812, were detained in close confinement as British subjects; and sent to England to undergo a trial for treason. On this being made known to our government, orders were given to General Dearborn to confine a like number of British prisoners taken at Fort George and to keep them as hostages for the safety of the Americans; which was carried into effect, and soon after made known to the governor of Canada. The British government was no sooner informed of this, than Governor Prevost was ordered to place forty-six American officers and

non-commissioned officers in confinement, to ensure the safety of the British soldiers.

This subject was the theme of very immediate debate in congress, which was at this time in session.

The result of this debate was, a determination to maintain with firmness the position which the administration had taken; and if Great Britain persisted in the fell resolution of rendering the war bloody beyond the example of modern times, the United States must, reluctantly, pursue a course to be lamented by every man of common humanity.

Notwithstanding the intemperate opposition on the floor of congress, the war was evidently gaining ground; the conduct of the enemy in the prosecution of hostilities, was such as to awaken the feelings of every American; and the rejection of the Russian mediation staggered many, who confidently predicted its prompt acceptance. The victories which we had obtained at sea, came home to the feelings of the whole nation, and were claimed exclusively by the opposition, as having always been the best friends to the navy. The British actually complained that those whom she considered her friends in America, should rejoice in her misfortunes; and accused them of faithlessness and inconstancy, because they permitted their love of country to overcome their hatred for the men in power. But this was a delightful proof of nationality, such as might have been expected from Britain herself, or from France, though not from a nation so recently composed of independent jarring states, not yet perfectly cemented.

It becomes every virtuous man to rejoice in the good fortune of his country, however he may dislike the present rulers. This sentiment was gradually gaining ground; the warlike appearances every where displayed, interested the ardent minds of the young and enterprising, and the feats of arms daily recounted, awakened the desire of being distinguished. The contagion of military pursuits was rapidly spreading. The habits of a people who had been thirty years at peace, and constantly occupied in their industrious avocations, could not be changed suddenly. But man is every where by nature warlike, and

cannot exist long in the midst of martial scenes and preparations, without catching their spirit. It would not have been difficult to predict, that the foreign enemy, which was at first regarded only as the enemy of a party, would soon become the enemy of the country.

Our affairs in the southward had assumed a serious aspect, and no sooner had the northern armies retired into winter quarters, than the public attention was kept alive by the interesting events which transpired in the country of the Creeks during the winter. That ill fated people had at length declared open war.

In consequence of the threatening appearances to the south, and the hostilities which already prevailed with the Indians inhabiting the Spanish territory, Governor Mitchell, of Georgia, was required, by the secretary at war, to detach a brigade to the Oakmulgee river, for the purpose of covering the frontier settlements of the state. Governor Holmes, of the Mississippi territory, was, at the same time, ordered to join a body of militia to the volunteers under General Claiborne, then stationed on the Mobile. In the course of the summer, the settlers in the vicinity of that river, became so much alarmed from the hostile deportment of the Creeks, that the greater part abandoned their plantations, and sought refuge in the different forts; while the peace party amongst the Creeks had, in some places, shut themselves up in forts, and were besieged by their countrymen.

The commencement of hostilities was witnessed by one of the most shocking massacres that can be found in the history of our Indian wars. The settlers, from an imperfect idea of their danger, had adopted an erroneous mode of defence, by throwing themselves into small forts or stations, at great distances from each other, on the various branches of the Mobile. Early in August, it was ascertained, that the Indians intended to make an attack upon all these stations, and destroy them in detail. The first place which they would attempt, would probably be Fort Mims, in which the greatest number of families had been collected.

Towards the latter part of August, information was brought that the Indians were about to make an attack on

this post, but unfortunately too little attention was paid to the warning. During the momentary continuance of the alarm, some preparations were made for defence, but it seems that it was almost impossible to rouse them from their unfortunate disbelief of the proximity of their danger. The fort was commanded by Major Beasley, of the Mississippi territory, (a brave officer, and, as a private citizen, highly respected,) with about a hundred volunteers under his command. By some fatality, notwithstanding the warnings he had received, he was not sufficiently on his guard, and suffered himself to be surprised on the thirtieth, at noon-day.

The sentinel had scarcely time to notify the approach of the Indians, when they rushed, with a dreadful yell, towards the gate, which was wide open; the garrison was instantly under arms, and the major flew towards the gate with some of his men, in order to close it, and, if possible, expel the enemy; but he soon after fell mortally wounded. The gate was at length closed, after great slaughter on both sides; but a number of the Indians had taken possession of a block house, from which they were expelled, after a bloody contest, by Captain Jack. The assault was still continued for an hour on the outside of the pickets; the port holes were several times carried by the assailants, and retaken by those within the fort.

The Indians now for a moment withdrew, apparently disheartened by their loss, but, on being harangued by their chief, Weatherford, they returned with augmented fury to the assault; having procured axes, they proceeded to cut down the gate, and, at the same time, made a breach in the pickets, and possessing themselves of the area of the fort, compelled the besieged to take refuge in the houses. Here they made a gallant resistance, but the Indians at length setting fire to the roofs, the situation of these unfortunate people became altogether hopeless. The agonizing shrieks of the unfortunate women and children at their unhappy fate, would have awakened pity in the breasts of tigers; it is only by those who have some faint idea of the nature of Indian warfare, that the horror of their situation can be conceived. The terror of the scene had already been sufficient to have bereft

them of their senses ; but what heart does not bleed at the recital of its realities. Not a soul was spared by these monsters ; from the most aged person to the youngest infant, they became the victims of indiscriminate butchery ; and some, to avoid a worse fate, even rushed into the flames. A few only escaped by leaping over the pickets, while the Indians were engaged in the work of massacre.

About two hundred and sixty persons, of all ages and sexes, thus perished, including some friendly Indians, and about one hundred negroes. The panic caused at the other posts or stations, by this dreadful catastrophe, can scarcely be described ; the wretched inhabitants, fearing a similar fate, abandoned their retreats of fancied security in the middle of the night, and in their endeavours to escape to Mobile, encountered every species of suffering. The dwellings of these settlers, (who were probably as numerous as the whole tribe of Creeks,) were burnt, and their cattle destroyed.

On the receipt of this disastrous intelligence, the Tennessee militia, under the orders of General Jackson and General Cocke, immediately marched to the country of the Creeks. On the second of November, General Coffee was detached, with nine hundred men, against the Tallushatches towns, and reached the place about daylight the next morning. The Indians, apprised of his approach, were prepared to receive him. Within a short distance of the village, the enemy charged upon him, with a boldness seldom displayed by Indians. They were repulsed, and after a most obstinate resistance, in which they would receive no quarters, they were slain almost to a man, and their women and children taken prisoners.-- There were nearly two hundred of the warriors killed in this affair. The loss of the Americans was five killed and forty wounded.

Late in the morning of the seventh, a friendly Indian brought intelligence to General Jackson, that about thirty miles below his camp, were a number of Creeks collected at a place called Talledega, where they were engaged in besieging a number of friendly Indians, who must inevitably perish unless speedily relieved. This officer, whose resolutions were as rapidly executed as they were formed,

marched at twelve o'clock the same night, at the head of twelve hundred men, and arrived within six miles of the place the next evening.

At midnight he again advanced—by seven o'clock was within a mile of the enemy, and immediately made the most judicious arrangements for surrounding them. Having approached in this manner almost unperceived, within eighty yards of the Indians, the battle commenced on their part with great fury; but being repulsed on all sides, they attempted to make their escape, but soon found themselves enclosed; two companies having at first given way, a space was left through which a considerable number of the enemy escaped, and were pursued to the mountains with great slaughter. In this action, the American loss was fifteen killed and eighty wounded. That of the Creeks was little short of three hundred; their whole force exceeded a thousand.

General Cocke, who commanded the other division of the Tennessee militia, on the 11th detached General White from Fort Armstrong, where he was encamped, against the hostile towns on the Tallapoosa river. After marching the whole night of the seventeenth, he surprised a town at daylight, containing upwards of three hundred warriors, sixty of whom were killed, and the rest taken prisoners. Having burnt several of their villages, which had been deserted, he returned on the twenty-third, without losing a single man.

The Georgia militia, under General Floyd, advanced into the Creek country, about the last of the month. Receiving information that a great number of Indians were collected at the Autossee towns, on the Tallapoosa river, a place which they called their beloved ground, and where, according to their prophets, no white man could molest them; General Floyd, placing himself at the head of nine hundred militia, and four hundred friendly Creeks, marched from his encampment on the Chatahouchie. On the evening of the twenty-eighth, he encamped within ten miles of the place, and resuming his march at one o'clock, reached the towns about six, and commenced an attack upon both at the same moment. His troops were met by the Indians with uncommo

✱

bravery; and it was not until after an obstinate resistance, that they were forced, by his musketry and bayonets, to fly to the thickets and copses in the rear of the towns. In the course of three hours the enemy was completely defeated, and the villages in flames. Eleven Americans were killed and fifty wounded, among the latter the general himself; of the enemy, it is supposed that beside the Autosse and Tallasse kings, upwards of two hundred were killed.

This just retribution, it was hoped, would bring these wretched creatures to a proper sense of their situation; but unfortunately it had not this effect; they still persisted in their hostilities against us. In the month of December, General Claiborne marched a detachment against the towns of Eccanachaca, on the Alabama river. On the twenty-second, he came suddenly upon them, killed thirty of their warriors, and after destroying their villages, returned with a trifling loss.

After the battle of Talledega, General Jackson was left with but a handful of men, in consequence of the term of service of the militia having expired. On the fourteenth of January he was fortunately reinforced by eight hundred volunteers from Tennessee, and soon after several hundred friendly Indians.

He was also joined by General Coffee with a number of officers, his militia having returned home. On the seventeenth, with a view of making a diversion in favour of General Floyd, and at the same time of relieving Fort Armstrong, which was said to be threatened, he penetrated the Indian country. On the evening of the twenty-first, believing himself, from appearances, in the vicinity of a large body of Indians, he encamped with great precaution, and placed himself in the best attitude for defence. Some time in the night, one of his spies brought information that he had seen the enemy a few miles off, and from their being busily engaged in sending away their women and children, it was evident they had discovered the Americans, and would either escape or make an attack before morning.

While the troops were in this state of readiness, they were vigorously attacked on their left flank about day

light; the enemy was resisted with firmness, and after a severe contest, they fled in every direction. This was however soon discovered to be a feint; General Coffee having been despatched with four hundred men, to destroy the enemy's camp, with directions not to attack it, if strongly fortified, returned with information that it would not be prudent to attempt it without artillery; half an hour had scarcely elapsed, when the enemy commenced a fierce attack on Jackson's left flank. It seems they had intended, by the first onset, to draw the Americans into a pursuit, and by that means create confusion; but this was completely prevented by Jackson's causing his left flank to keep its position.

General Coffee, with about fifty of his officers, acting as volunteers, assailed the Indians on the left, while about two hundred friendly Indians came upon them on the right. The whole line giving them one fire, resolutely charged; and the enemy being disappointed in their plan, fled with precipitation. On the left flank of the Indians the contest was kept up some time longer; General Coffee was severely wounded, and his aid, A. Donaldson, killed; on being reinforced by a party of the friendly Indians, he compelled the enemy to fly, leaving fifty of their warriors on the ground.

General Jackson, being apprehensive of another attack, fortified his camp for the night; the next day, fearing a want of provisions, he found it necessary to retreat, and before night reached Enotachopco, having passed a dangerous defile without interruption. In the morning he had to cross a defile still more dangerous, where he might expect that the enemy had formed an ambuscade; he therefore determined to pass at some other point. The most judicious arrangements having been made for the disposition of his force in case of attack, he moved forward towards the pass which he had selected. The front guard, with part of the flank columns, together with the wounded, had scarcely crossed the creek, when the alarm was given in the rear.

Jackson immediately gave orders for his right and left columns to wheel on their pivot, and crossing the stream above and below, assail the flanks and rear of the enemy

and thus completely enclose them. But, to his astonishment and mortification, when the word was given for these columns to form, and a few guns were fired, they precipitately gave way. This unaccountable flight had well nigh proved fatal; it drew along with it the greater part of the centre column, leaving not more than twenty-five men, who, being formed by Colonel Carrol, maintained their ground for a time against overwhelming numbers. All that could now be opposed to the enemy, were the few who remained of the rear guard, the artillery company, and Captain Rupel's company of spies. Their conduct, however, was admirable. Lieutenant Armstrong, with the utmost coolness and intrepidity, dragged, with the assistance of a few more, the six pounder up the hill, although exposed to a heavy fire; and having gained his position, loaded the piece with grape, and fired it with such effect, that, after a few discharges, the enemy was repulsed.

The Indians were pursued for several miles by Colonel Carrol, Colonel Higgins, and Captains Elliot and Pipkins. Captain Gordon, of the spies, had partly succeeded in turning their flanks, and, by this impetuous charge, contributed greatly to restore the day. The Americans now continued their march without further molestation. In these different engagements, about twenty Americans were killed, and seventy-five wounded; in the last, about one hundred and eighty of the Creeks were slain.

Meanwhile, General Floyd was advancing towards the Indian territory, from the Chatahouchie river. On the twenty-seventh of January his camp was attacked by a large body of Indians about an hour before day. They stole upon the sentinels, fired upon them, and then rushed with great impetuosity towards the line. The action soon became general; the front of both flanks was closely pressed, but the firmness of the officers and men repelled their assaults at every point. As soon as it became sufficiently light, General Floyd strengthened his right wing, and formed his cavalry in the rear, then directed a charge; the enemy were driven before the bayonet, and being pursued by the cavalry, many of them were killed. The loss of General Floyd was seventeen killed, and one

hundred and thirty-two wounded. That of the Indians could not be ascertained; thirty-seven of their warriors were left dead on the field, but it is thought their loss was very considerable.

By this time it might be supposed that the Creeks had been satisfied with the experiment of war, but they appear to have been infatuated in a most extraordinary degree. From the influence of their prophets over their superstitious minds, they were led on from one ruinous effort to another, in hopes that the time would at last arrive, when their enemies would be delivered into their hands.

General Jackson, having received considerable reinforcements from Tennessee, and being joined by a number of friendly Indians, set out on an expedition to the Tallapoose River. He proceeded from the Coose on the twenty-fourth of March, reached the southern extremity of the New-Youca on the twenty-seventh, at a place called the Horse-shoe-bend of the Coose. Nature furnishes few situations so eligible for defence; and here the Creeks, by the direction of their prophets, had made their last stand. Across the neck of land they had erected a breastwork of the greatest compactness and strength, from five to eight feet high, and provided with a double row of port holes artfully arranged. In this place they considered themselves perfectly secure. The assailants could not approach without being exposed to a double and cross fire from the Indians who lay behind. The area thus enclosed by the breastworks was little short of one hundred acres. The warriors from Oakfuskee, Oakshaya, Hilebees, the Fish Ponds, and Eupata towns, had collected their force at this place, in number exceeding a thousand.

Early in the morning of the twenty-seventh, General Jackson, having encamped the preceding night within six miles of the bend, detached General Coffee, with the mounted men, and nearly the whole of the Indian force, to pass the river at a ford about three miles below their encampment, and to surround the bend in such a manner that none of them should escape by attempting to cross the river. With the remainder of his force, General Jackson advanced to the point of the breastwork, and a

half past ten planted his artillery on a small eminence within eighty yards of the nearest point of the work, and within two hundred and fifty of the farthest. A brisk cannonade was opened upon the centre, and a severe fire was kept up with musketry and rifles, when the Indians ventured to show themselves behind their defences.

In the meantime, General Coffee, having crossed below had advanced towards the village ; when within half a mile of that which stood at the extremity of the peninsula, the Indians gave their yell ; Coffee, expecting an immediate attack, drew up his men in order of battle, and in this manner continued to move forward. The friendly Indians had previously taken possession of the bank, for the purpose of preventing the retreat of the enemy ; but they no sooner heard the artillery of Jackson, and the approach of Coffee, than they rushed forward to the banks ; while the militia, apprehending an attack from the Oakfuskee villages, were obliged to remain in order of battle.

The friendly Indians, unable to remain silent spectators, began to fire across the stream, about one hundred yards wide, while some plunged into the river, and swimming across, brought back a number of canoes ; in these the greater part embarked, landed on the peninsula, then advanced into the village, drove the enemy from their huts up to the fortifications, and continued to annoy them during the whole action. This movement of the Indians rendered it necessary that a part of Coffee's line should take their place.

General Jackson, finding that his arrangements were complete, at length yielded to the earnest solicitations of his men to be led to the charge. The regular troops, led by Colonel Williams and Major Montgomery, were in a moment in possession of the nearest part of the breast works ; the militia accompanied them with equal firmness and intrepidity. Having maintained, for a few minutes, a very obstinate contest, muzzle to muzzle, through the port holes, they succeeded in gaining the opposite side of the works. The event could no longer be doubtful.

The enemy, although many of them fought with that kind of bravery which desperation inspires, were cut to

pieces. The whole margin of the river which surrounded the peninsula, was strewed with the slain. Five hundred and fifty-seven were found, besides those thrown into the river by their friends, or drowned in attempting to escape. Not more than fifty could have escaped. Among their slain was their great prophet Manahoe, and two others of less note. About three hundred women and children were taken prisoners. Jackson's loss was twenty-six white men killed, and one hundred and seven wounded; eighteen Cherokees killed, and thirty-six wounded; and five friendly Creeks killed, and eleven wounded.

This most decisive victory put an end to the Creek war. The spirit and power of these misguided men were completely broken; Jackson soon after scoured the countries on the Coose and Tallapoose. A party of the enemy, on the latter river, on his approach fled to Pensacola. The greater part of the Creeks now came forward, and threw themselves on the mercy of the victors. A detachment of militia from North and South Carolina, under the command of Colonel Pearson, scoured the country on the Alabama, and received the submission of a great number of Creek warriors and their prophets.

In the course of the summer, a treaty of peace was dictated to them by Jackson, on severe but just terms. They agreed to yield a portion of their country as an indemnity for the expenses of the war; they conceded the privilege of opening roads through their country, together with the liberty of navigating their rivers. They also stipulated to hold no intercourse with any British or Spanish post or garrison, and to deliver up the property they had taken from whites or friendly Indians. The general, on the part of the United States, undertook to guarantee their territory, to restore all their prisoners, and in consideration of their destitute situation, to furnish them gratuitously with the necessaries of life, until they could provide for themselves. They also engaged to establish trading houses, and endeavour to bring back the nation to their former state.

It has already been stated, that after the failure of the campaign against the British provinces, the army retired

into winter quarters. It remained inactive till the latter part of February. The Secretary of War gave orders to withdraw to Plattsburgh, and that two thousand men should be marched to Sackett's Harbour, under General Brown, with a proportion of field pieces and battering cannon. The general destroyed his barracks, and retired to the place assigned him. The British detached a large force under Col. Scott, who destroyed the public stores, and pillaged the citizens.

Towards the latter end of March, General Wilkinson determined to erect a battery at a place called Rouse's point, where his engineer had discovered a position from which the enemy's fleet, then laid up at St. John's, might be kept in check. The ice breaking up on Lake Champlain sooner than usual, defeated his plan; a body of the enemy, upwards of two thousand strong, on discovering his design, had been collected at La Colle mill, three miles from Rouse's point, for the purpose of opposing him. With a view of dislodging this party, and at the same time of forming a diversion in favour of General Brown, who had marched against Niagara, the commander in chief, at the head of about four thousand men, crossed the Canada lines on the thirtieth of March.

After dispersing several of the enemy's skirmishing parties, he reached La Colle mill, a large fortified stone house, at which Major Hancock commanded. An eighteen pounder was ordered up, but owing to the nature of the ground over which it had to pass, the transportation was found impracticable; a twelve pounder and a five inch *howitzer, were therefore substituted. These pieces, under the direction of Captain M'Pherson, and Lieutenants Larabee and Sheldon, were posted at the distance of two hundred paces from the house, and covered by the second Brigade, with part of Colonel Clark's command, under General Smith on the right; and the third brigade, under General Bissel, on the left. Colonel Miller was ordered to take a position with the twelfth and thirteenth regiments, in order to cut off the enemy's retreat; while the reserve, composed of four select corps of the first brigade, was placed under the command of General Macomb.

These arrangements being made, the battery opened

upon the house, and the fire was promptly returned. The different corps were greatly exposed to the fire from the house; it was found impossible to effect a breach, although the guns were managed with great skill. Captain M'Pherson was wounded at the commencement of the attack, but continued, notwithstanding, at his post, until a second shot had broken his thigh, his next officer, Larabee, was shot through the lungs; Lieutenant Sheldon kept up the fire until the end of the affair, and behaved in a manner which drew forth the praise of his general.

The British commander, perceiving that the Americans persisted in bombarding the house, made a desperate sortie, and several times charged upon the cannon, in which he was repulsed by the covering troops, and compelled to retire to his fortress with loss. It being now found impracticable to make an impression on this strong building, whose walls were of unusual thickness, the commander in chief, calling in his different parties, fell back in good order. The loss of the Americans in this affair was upwards of one hundred and forty in killed and wounded; that of the British is not ascertained.

Many were the difficulties under which the army laboured. Lack of system, a severe climate, sickness, unforeseen expenses, abuses in every department, and want of experience and education in the subalterns; and the disgraceful conduct of many of the frontier inhabitants, in supplying the enemy with provisions, are among the number of misfortunes under which the country laboured. Besides which, the enemy was regularly informed of every thing which transpired on the American side.

Shortly after the affair of La Colle, the greater part of the British force was collected at St. John's and the Isle Aux Noix, for the purpose of securing the entrance of the squadron into Lake Champlain, on the breaking up of the ice. This was effected early in May. Some time before this, on the suggestion of General Wilkinson, Commodore M'Donough had fortified the mouth of Otter River, so as to secure a passage for his flotilla, which then lay at Vergennes, higher up the river, waiting for its armament. This precaution proved of great service. The commodore had laboured, with indefatigable industry, a

provide a naval force on this lake, to cope with that of the enemy; the vessels had been built during the autumn and winter, but their armament did not arrive before spring.

The first object of the enemy, when they found the navigation open, was to attempt the destruction of the fleet, before it could move upon it. element, prepared to meet them. On the 12th of May, not long after the erection of the battery on the cape, at the entrance of the river, a bomb vessel, and three large gallies, were stationed by the enemy across the creek, for the purpose of blockading the squadron, and, at the same time, to intercept naval supplies, which it was supposed would be sent by water, for the purpose of completing its armament. Captain Thornton, of the light artillery, and Lieutenant Cassin, with a number of sailors, were ordered to the defence of the battery. Indications being, at the same time, discovered, of an attempt by the enemy to assail the battery in the rear, General Davis, of the Vermont militia, called part of his brigade, in order to oppose the landing.

At day-break, on the 14th, the enemy commenced an attack upon the works, but were so effectually resisted, that they were compelled to withdraw from their position with the loss of two gallies, which they were obliged to abandon. Soon after, the whole squadron moved down the lake, but not without some skirmishing with General Wright, of the militia, as they passed Burlington. Commodore M'Donough had attempted to bring some of the American vessels to the mouth of the river, but the British squadron had disappeared before he could attain his object.

While the naval preparations were making on Lake Champlain, the winter and spring were taken up with the preparations for a contest of superiority on Lake Ontario. The British converted it, however, into a contest in building the greatest number, and the largest ships. At Kingston a ship of extraordinary size was building; for the enemy no longer trusted, as they had done with other nations, to superior seamanship and valour. Commodore Chauncey was under the necessity of building additional vessels, for the purpose of maintaining, as nearly as possi-

ble, an equality of force. The enemy was, however, not satisfied in endeavouring to conquer us in ship building; they made numerous attempts to destroy, by insidious means, those already built by the Americans. On the twenty-fifth of April, three of the enemy's boats, provided with the means of blowing up the vessels, succeeded in getting close into Sackett's Harbour undiscovered, but before they could execute their purpose, they were detected, and fired upon by Lieutenant Dudley, the officer of the guard, on which they threw their powder into the lake, and pulled off. Failing in all these attempts, from the vigilance of the Americans, they next formed the determination to intercept the naval stores on their way from Oswego, where they had been deposited. Thither Sir James proceeded with his whole fleet, and having on board a large body of troops under General Drummond, proceeded, on the fifth of May, with the determination of storming the town, and capturing the equipments destined for the new vessels.

The British commenced a heavy bombardment, which was kept up for several days; the unexpected and gallant resistance of the garrison, consisting of three hundred men under Lieutenant Colonel Mitchell, was in vain against such superior force. The schooner Growler, then in Oswego Creek to receive the cannon, was sunk, to prevent her from being taken, and all the tents that could be procured were pitched on the village side, to give the appearance of a large force of militia. The sailors of the Growler, under Lieutenant Pearce, were added to the garrison; the shore battery was commanded by Captain Boyle, seconded by Lieutenant Legate. At one o'clock, fifteen barges, filled with troops, moved towards the shore, preceded by several gun-boats, while a heavy cannonade was commenced by the larger vessels. They were so warmly received by the battery on shore, that the boats were twice repulsed, and one of the largest fell into the hands of the Americans.

The squadron now stood off, but this was evidently for the purpose of renewing the attack, in such a manner as to render it effectual. They again approached on the sixth, having resolved to land under cover of her ships

they accordingly kept up a heavy fire for three hours, while their land forces, two thousand in number, under General De Watteville, succeeded in gaining the shore, after being gallantly opposed by Lieutenant Pearce and his seamen. Colonel Mitchell now abandoned the fort, and joining his corps to the marines and seamen, engaged the enemy's flank, and did great execution. Finding further resistance useless, he fell back, formed his troops, and took up his march to the falls of Oswego, destroying the bridges in his rear.

Hither, to the inexpressible disappointment of the British, the naval stores had been removed, and all their trouble, and the loss which they sustained, procured them nothing more than a few barrels of provisions and some whiskey. This was purchased with the loss of two hundred and thirty-five men, in killed and wounded; they were certainly entitled to the victory, but they never thought proper to claim it. The loss of the Americans was sixty-nine in killed, wounded and missing; among the first, a promising officer, Lieutenant Blaney.

On the evening of the same day, a part of the force proceeded to Pultneyville, and demanded the public stores. The inhabitants were unable to repel the invaders, who indulged themselves in their usual depredations; when General Swift, of the New-York militia, opportunely arriving, with a part of his brigade, put them to flight. The British, soon after, hearing that the Superior, which had lately been launched, had received her equipments from the interior, broke up the blockade and returned to Kingston.

Another new ship, the Mohawk, was at this time on the stocks, and as she would have to be supplied with her equipments from the same place, it was determined, since the British had disappeared, to transport them by water, and avoid the expense and delay of land transportation. To deceive the enemy, who had numerous gunboats hovering about the different creeks, a report was circulated that it was intended to forward the stores to the Oneida lake. Nineteen barges were loaded at Oswego, and Major Appling was despatched by General Gaines, with a detachment to aid Captain Woolsey, in their defence.

On the 28th of May, Captain Woolsey, finding the coast clear, reached the village by sunset, and taking advantage of the darkness of the night put into the lake. The next day they reached Sandy creek, and ascending it a few miles, despatched a boat to look out for the British on the lake; this boat was discovered by some gun vessels, and immediately chased. Major Appling and Captain Woolsey determined to draw them into an ambuscade. As had been anticipated, the enemy pushed their gunboats and cutters up the creek, while a party landed and ascended along the bank.

The Americans now rushed suddenly upon them, and in a few moments, after one fire, by which a number of them were killed and wounded, the whole party was taken prisoners, consisting of four lieutenants of the navy, two lieutenants of the marines, and one hundred and thirty men, together with all their boats and cutters. Major Appling, for this affair, was brevetted, and his officers, Lieutenants Smith, M^cIntosh, Calhoun, M^cFarland, and Armstrong, and Ensign Austin, were publicly thanked. The conduct of Captain Woolsey and his officers was not less applauded.

“The consequences of this affair, were severely felt by the British; they lost a number of their best seamen and officers, and Commodore Chauncey was once more master of the lake. He accordingly sailed out, and several times presented himself before Kingston, but Sir James did not think it prudent to stir out, until his large ship of one hundred and twelve guns, then on the stocks, should be completed. This mode of warfare was exceedingly expensive, but more to the British than to the Americans; it is ascertained that it cost the former more than twice what was expended by the Americans, in consequence of their greater difficulties of transportation.

“General Brown had, in the mean time, reached the Niagara frontier, and it was expected that the enemy would be immediately expelled from the American territory; but his situation did not permit the attempt, and with the exception of a few partial encounters, tranquillity prevailed along the Niagara frontier during the summer. It would be improper to pass over in silence, how-

ever, an affair which took place in this quarter. Colonel Campbell crossed the lake from Erie, with about five hundred men, and landing at Dover, a small village on the Canada side, proceeded to destroy the mills, together with the greater part of the private dwellings. The expedition was undertaken without orders, and his conduct in this affair, though otherwise a meritorious officer, was greatly reprobated; a court of inquiry, at which General Scott presided, was instituted. The court decided, that the destruction of the distilleries and mills might be justified by the usages of war, as they furnished the British troops with their necessary supplies; but with respect to the other part of his conduct, although excused, in some measure, by the example of the enemy, in the destruction of the villages on the Niagara, it was nevertheless condemned.

Early in the spring, intelligence was received that a body of regulars, militia, and Indians, was collected on the River Thames. Captain Lee succeeded in gaining their rear, and made prisoners of several officers, and among them Colonel Baubee, who commanded a party of Indians in their depredations on the frontier of New-York.

“A gallant affair was soon after achieved by Captain Holmes, a youth of the most promising talents, and brother to the governor of the Mississippi territory. With a party of about one hundred and sixty rangers and mounted men, he proceeded, on the twenty-first of February, against some of the enemy's posts. About the beginning of March, he received intelligence that a British force, which afterwards proved to be double his own, was descending the River Thames.

Captain Holmes, finding himself not in a situation to give battle, from the fatigues which his men had already encountered, and his ignorance of the strength of the enemy's party, fell back a few miles, and chose a strong position, where he was confident of being able to defend himself until he could obtain the necessary information of the British. He despatched a small body of rangers for this purpose, but which soon returned, pursued by the enemy, but without being able to learn his strength. The

British, perceiving the strength of Captain Holmes' position, resorted to stratagem for the purpose of drawing him from it. They feigned an attack, and then retreated taking care not to show more than sixty or seventy men. Captain Holmes now pursued, but with caution; and after proceeding about five miles, discovered their main body drawn up to receive him, on which he immediately returned to his former position. Having disposed of her troops in the most judicious manner, he firmly waited for them; being protected in front by a deep ravine, and the approaches on the other side somewhat difficult.

The attack was commenced at the same moment on every point, with savage yells, and the sound of bugles, the regulars charging up the heights from the ravine; the other sides were rapidly assailed by militia and Indians. The first approached within twenty paces of the American lines, against a very destructive fire; but the front section being cut to pieces, those who followed, severely wounded, and many of their officers cut down, they retired to the woods, within thirty or forty paces, and the firing continued with great spirit on both sides. The American regulars being uncovered, were ordered to kneel, that the brow of the heights might assist in screening them from the enemy; but the enemy's covering was insufficient, a single tree affording no shelter even to one, from the extended line of the Americans, much less to the squads that stood together.

On the other sides, the attack was sustained with equal coolness, and with considerable loss to the foe; the Americans had, on three sides, thrown together some logs hastily, and no charge being made, they could aim their pieces at leisure, with that deadly certainty which belongs to the backwoodsman. The British, after an hour of hard fighting, ordered a retreat; and as the night approached, Captain Holmes thought it not advisable to pursue; besides, his men were much fatigued, and many of them had nearly worn out their shoes on the hard frozen ground. The American loss on this occasion did not amount to more than six killed and wounded. According to the statement of the British, their loss was sixty-five killed and wounded, besides Indians. In consequence of his good conduct in

this affair, Captain Holmes was promoted to the rank of major.

The northern sea coast, which had thus far experienced little molestation from the enemy, became the object of attack early in the spring. On the seventh of April a body of sailors and marines, to the number of two hundred, ascended the Connecticut River, as far as Saybrook, where they spiked the cannon, and destroyed the shipping; they proceeded thence to Brockway's ferry, where they did the same; and afterwards, unapprehensive of attack, carelessly remained twenty-four hours. In the meantime, a body of militia, together with a number of marines and sailors, under Captain Jones, and Lieutenant Biddle, had collected for the purpose of cutting off their retreat; but the British, taking advantage of a very dark night, and using muffled oars, escaped to their fleet, after having destroyed two hundred thousand dollars worth of shipping.

About this time the coasting trade was almost destroyed by a British privateer, the *Liverpool Packet*, which cruised in the sound. Commodore Lewis sailed with a detachment of thirteen gun-boats, and succeeded in chasing her off. On his arrival at Saybrook, he found upwards of fifty vessels bound to the eastward, but afraid to venture out. The commodore consented to take them under convoy, but was not able to promise them protection against the squadron then blockading New-London. They, however, being disposed to run the risk, he sailed with them on the twenty-fifth, and, in the afternoon of the same day, was compelled to throw himself between his convoy and a British frigate, a sloop of war and a tender, and kept up a contest until the coasters had safely reached New-London.

Having attained his object, he determined to try what he could do with his gun-boats against the enemy's ships. Furnaces being hastily constructed, he began to throw hot balls at the enemy's sides, and repeatedly set their ships on fire, without receiving any injury himself. The sloop soon withdrew, and the fire was principally directed against the frigate. One shot passed through her very near her magazine; her lieutenant, and a great number of

her men were already killed; her captain was on the point of striking, when he observed that the gun-boats had ceased firing. The night soon after coming on, the gun-boats desisted from the attack, determined to wait until morning. At daylight they perceived the squadron towing away; it was resolved to pursue them, but several other frigates soon made their appearance, and put a stop to this design. This affair, together with that of Craney Island, revived the discussion on the utility of gun-boats in the defence of harbours, and the coast. Great services had been rendered by Captain Lewis, on this, as well as on many other occasions.

Formidable squadrons were kept up before the ports of New-York, New-London, and Boston; and the whole eastern coast was exposed to the enemy. The war was carried on here in a very different manner from that at the south. Commodore Hardy would not permit any wanton outrages upon private property, or upon defenceless individuals. In spite, however, of his general demeanour, there were particular instances of the contrary on the part of the officers commanding smaller parties, and actuated by a thirst for plunder. At the towns of Wareham and Scituate, they burned all the vessels at their moorings; and, at the former, they set fire to an extensive cotton manufactory. At a place called Boothbay, they met with a spirited resistance, and were repeatedly repulsed in various desperate attacks.

An invasion of a more serious nature was made in July. On the eleventh of that month, Sir Thomas Hardy, with a strong force, made a descent on Moose Island, and after taking possession of Eastport, declared all the islands and towns on the eastern side of Passamaquoddy Bay, to appertain to his Britannic majesty, and required the inhabitants to appear within seven days, and take the oath of allegiance. About two thirds of the inhabitants submitted; but, in the month of August, the council of the province of New-Brunswick declared, that notwithstanding the oath of allegiance, they should be considered as a conquered people, and placed under military government. Eastport was soon after strongly fortified but it was found extremely difficult for the enemy to sub

sist his troops, and the desertions were so frequent as to render it almost impossible to keep up a garrison.

The commodore soon after sailed with a part of his squadron, for the purpose of attacking Stonington. The appearance of this force excited much alarm, which was not diminished when they received a message from the commodore, to remove the women and children, as he had received orders to reduce the place to ashes. The inhabitants, although with very trifling means of defence, determined to make an attempt to save their property.—The handful of militia of the place repaired to a small battery erected on the shore, and to a breastwork thrown up for musketry, and at the same time despatched an express to obtain assistance from General Cushing, commanding at New-London.

In the evening, five barges and a large launch, filled with men, approached the shore, under cover of a heavy fire from the ships. The Americans, reserving their fire until the enemy were within short grape distance, opened their two eighteen pounders, and soon compelled the invaders to retire out of the reach of their battery.—They next proceeded to another part of the town, which they supposed defenceless; but a part of the militia being detached thither with a six pounder, the barges were again repulsed; the enemy then retired to their ships, but determined to renew the attack in the morning; and, in the meantime, kept up a bombardment until midnight. The next morning it was discovered, that one of the enemy's vessels had approached within pistol shot of the battery, and the barges advanced in still greater numbers than the day before; these were again gallantly repulsed, and the vessel driven from her anchorage. The squadron then renewed the bombardment of the town, but without effect; and on the twelfth, the commodore thought proper to retire.

The inhabitants, after this gallant defence, which, considering the means with which it was effected, and the great disparity of force opposed to them, deserve much praise, once more occupied their dwellings in security. It was not long after this that the British occupied all that part of the district of Maine, between Penobscot river

and Passainaquoddy Bay, and declared it to be held as a colony.

On the first of September, the Governor of Nova Scotia and Admiral Griffith entered the Penobscot River, and took possession of Castine, which the garrison had previously evacuated. A proclamation was then issued, declaring that possession of that part of the province of Maine, east of the Penobscot, was formally taken in the name of his Britannic majesty. The country, which contained about thirty thousand inhabitants, was then gradually occupied, and possessed until the conclusion of the war.

The naval incidents of eighteen hundred and fourteen, are as grateful to American feelings as those of the two former years. An occurrence took place in the very beginning of the year, which afforded to us as much cause for triumph, as of mortification to the enemy. In the month of February, Commodore Rodgers, on his return from a cruise in the *President*, found himself off Sandy Hook, within a short distance of three large British ships of war, the nearest of which was the *Plantagenet*, a seventy-four. Believing that an engagement with one or all of them was unavoidable, he cleared his ship for action, determined not to surrender, without selling his ship as dearly as he could. But notwithstanding he fired several guns to windward, as a proof of his willingness to engage, the British vessels did not think proper to approach, and he safely reached New-York. Captain Lloyd of the *Plantagenet*, after returning to England, accounted for his conduct, by alleging a mutiny in his ship, and several of his sailors were executed on the charge.

Another affair took place soon after, which furnished a still stronger proof of the now acknowledged superiority of America upon the ocean, an acknowledgment more strongly expressed than by words. In the month of April, Captain Stewart was also on his return in the *Constitution*, after a cruise, when he was chased by two British frigates and a brig, but escaped, by superior seamanship, into Marblehead. Some time before, after capturing the public schooner *Pictou*, he fell in with the British frigate *La Pique*, Captain Maitland, who fled on the

approach of the Constitution, and finally escaped during the night, after a long chase. Captain Maitland was complimented by the board of admiralty, for thus obeying their instructions, in not fighting an American frigate singly; it having been determined, that not less than two frigates could be a match for an American.

The enemy had become equally shy of the gun-boat flotilla. Commodore Lewis repeatedly beat off the British vessels near Sandy Hook, and facilitated the return of the American ships. The Regent, loaded with a very valuable cargo, was chased by the Belvidera, when Commodore Lewis, throwing himself, with eleven of his gun-boats between them, the frigate moved off without returning the shot of the gun-boats.

That brave and adventurous seaman, Commodore Porter, terminated this year his glorious cruise in the Pacific. From Lima, in the neighbourhood of which he had chastised the pirates of the ship *Nereyda*, he proceeded to the Gallipagos, where he cruised from April, 1813, until October; and, in the course of that time, captured twelve British armed whale ships, carrying, in all, one hundred and seven guns, and three hundred and two men.

Several of these were equipped as American cruisers and store-ships; and the *Atlantic*, now called the *Essex Junior*, of twenty guns, and sixty men, was assigned to Lieutenant Downes. The prizes which were to be laid up, were convoyed by this officer to Valparaiso. On his return, he brought intelligence to Commodore Porter, that a British squadron, consisting of one frigate, and two sloops of war, and a store ship of twenty guns, had sailed in quest of the *Essex*. The commodore, having been almost a year at sea, with little intermission, found it absolutely necessary that his ship should undergo considerable repairs. With this view he steered to the island of *Nooaheeva*, or *Madison's Island*, which he so named in honour of the President.

Here he found a fine bay, and a situation in every respect suitable to his wishes, the inhabitants apparently friendly. But it was not long before he found that his situation would be unsafe, in consequence of a war which prevailed between the inhabitants of a neighbouring vil

lage, and those among whom he had been received. These insisted upon his joining them in their wars, and threatened to drive him away if he did not. The commodore was compelled, by a regard to his own safety, to send a party of sailors with the natives, who, by their assistance, defeated their enemies; and, by the interference of the commodore, a peace was brought about between them. In consequence of this the natives erected a village for the commodore, freely traded with him for provisions, and for some time the greatest harmony prevailed.

His safety was again threatened by the conduct of the Typees, an inland tribe, one of the most warlike on the island, and which still continued hostile, and who were continually urging the friendly Indians to destroy the strangers.

The commodore found his situation growing every day more critical. He, therefore, resolved to pursue the course necessary to ensure his safety, and which has always been held justifiable in our intercourse with uncivilized men, who are only to be restrained from violence and injustice, by terror. He had succeeded thus far by peaceable means, and, by the permission of the natives, in placing his vessel in a state to be repaired; but should the tribes around him become inimical, (and what confidence can any one repose in the faith of a savage, who regards only force,) he might be in greater danger in his present situation.

He was very unwilling to engage in war with them; to prevent the necessity he sent them a present, and requested that they would remain quiet, and be at peace. This had no other effect than to increase their insolence to the Americans, whom they represented as a cowardly race, or they would not have condescended to beg for peace. This enmity was naturally enough engendered by their jealousy of the tribes who had the benefit of the traffic with the whites, and by this means obtained articles from them, according to their estimation, of great value.

The commodore now discovered that his safety depended entirely upon making these people feel his strength, as it was impossible for him, in his present situation, to leave the island until his vessel could be repaired, and

while the greater part of his effects were actually on shore. He therefore set off, at the head of thirty-five men, against these people, determined to give them battle, and, by showing the efficacy of his weapons, compel them to be at peace. The tribes, heretofore friendly, were on the point of breaking out into hostilities, and were only induced to wait the result of this expedition, of which they were little more than silent spectators. The commodore had in vain endeavoured to convince them of the destructive nature of his fire-arms, by shooting at rocks and trees; war was absolutely unavoidable. But the small force with which he marched, was insufficient to make any impression.

Their country being exceedingly mountainous, and abounding in thickets, rendered it easy for them to escape. The commodore was therefore compelled to return in a worse situation than before. To prevent the friendly Indians from rising, he found it necessary to inform them that he would proceed the next day with the greater part of his men. A large body was now marched across the mountains, notwithstanding the extreme difficulties of the route, and penetrated into their valley; but the natives, as usual, took refuge in their inaccessible fastnesses. The only mode of causing them to feel the consequences of their conduct, was in the destruction of their villages; nine of them were accordingly burnt, after which the party retreated.

The Typees now gladly accepted terms of peace, and all the tribes on the island, soon after, were reconciled to each other; a circumstance which the oldest amongst them did not recollect to have seen; and they vied with each other in friendship towards the whites while the commodore remained.

We have now to record a most singular fact, and one which speaks volumes for the prowess of our little navy.

During the third year, every naval combat, without a single exception, where there was any thing like an equality of force, terminated in favour of the Americans. The sloop of war *Peacock*, launched in October, performed a cruise during the winter, and on her return was chased into St. Mary's. She soon after put to sea again, and on

the twenty-ninth of April discovered the brig of war *Epervier*, Captain Wales, having several vessels under convoy. Captain Warrington engaged the *Epervier*, while the others were making their escape. At the first broadside, the foreyard of the *Peacock* was totally disabled by two round shot in the starboard quarter. By this she was deprived of the use of her fore and fore-topsail, and was obliged to keep aloof during the remainder of the action, which lasted forty-two minutes. In this time she received considerable damage in her rigging, but her hull was not at all injured.

The *Epervier* struck, having five feet water in her hold, her topmasts over her side, her main boom shot away, her foremast cut nearly in two, her rigging and stays shot away, her hull pierced by forty-five shot, twenty of which were within a foot of her water line. Eleven of her crew were killed, and her first lieutenant and fourteen men wounded. She was immediately taken possession of by Lieutenant Nicholson, first officer of the *Peacock*, who, with Lieutenant Vorhees, of the same ship, had been already distinguished in another naval action. The sum of one hundred and eighteen thousand dollars in specie was found in her, and transferred to the *Peacock*. Captain Warrington immediately repaired, with his prize, to one of the southern ports.

The day following, the captain discovered two frigates in chase. At the suggestion of Lieutenant Nicholson, he took all the prisoners on board the *Peacock*, and leaving a sufficient number on board the *Epervier* for the purpose of navigating her, he directed her to seek the nearest port. By skilful seamanship the captain succeeded in escaping from the enemy's ships, and reached Savannah, where he found his prize. Lieutenant Nicholson, by his good management, had brought her in, after encountering very great difficulties.

The new sloop of war *Wasp*, Captain Blakeley, sailed from Portsmouth on the first of May, and after capturing seven merchantmen, fell in with the British brig of war the *Reindeer*, Captain Manners, which she captured after an action of eighteen minutes. On the sixth of July, being in chase of two vessels, he discovered the *Reindeer*

and immediately altered his course, and hauled by the wind in chase of her. At fifteen minutes past one, Captain Blakeley prepared for action; but it was not before fifteen minutes after three, in consequence of their manœuvring, and the endeavours of the Reindeer to escape, that they approached sufficiently near to engage. Several guns were fired from the Wasp before her antagonists could bring her guns to bear; her helm was then put alee, and at twenty-six minutes after three, Captain Blakeley commenced the action with his after carronades on the starboard side, and fired in succession. Shortly after, the larboard bow coming in contact with the Wasp, Captain Manners gave orders to board, but the attempt was gallantly repulsed by the crew of the Wasp, and the enemy was several times repelled; at forty-four minutes past three, orders were given to board in turn. Throwing themselves with promptitude upon her deck, they succeeded in the execution of their orders; and, at forty minutes past four the flag of the enemy's ship came down. She was almost cut to pieces, and half her crew was killed and wounded. The loss of the Wasp was five killed, and twenty-one wounded; among the latter, Midshipmen Langdon and Toscan, both of whom expired some days after. The Reindeer having been found altogether unmanageable, was blown up, and Captain Blakeley steered for L'Orient, to provide for the wounded of both crews.

After leaving L'Orient, and capturing two valuable British merchantmen, Captain Blakeley fell in with a fleet of ten sail, under convoy of the Armada seventy-four, and a bomb ship. He stood for them, and succeeded in cutting out of the squadron a brig laden with brass and iron cannon, and military stores, from Gibraltar; after taking out the prisoners, and setting her on fire, he endeavoured to cut out another, but was chased off by the seventy-four. In the evening, at half past six, he descried two vessels, one on his starboard, and one on his larboard bow, and hauled for that which was farthest to windward. At seven she was discovered to be a brig of war, and at twenty-nine minutes past nine she was under the lee bow of the Wasp. An action soon after commenced, which

lasted until ten o'clock, when Captain Blakeley, supposing his antagonist to be silenced, ceased firing, and demanded if he had surrendered. No answer being returned, he commenced firing, and the enemy returned broadside for broadside for twelve minutes, when, perceiving that the two last were not returned, he hailed again, and was informed that she was sinking, and that her commander had struck.

Before the *Wasp's* boat could be lowered, a second brig of war was discovered : the crew were instantly sent to their quarters, and the *Wasp* was standing to for the approach of the stranger, when two other brigs appeared ; he now made sail, and endeavoured to draw the first one after him, but without effect. The name of the prize has since been ascertained to have been the *Avon*, Captain Arbuthnot, of the same force as the *Reindeer*. She sunk immediately after the last man had been taken out of her. She had eight killed, and thirty-one wounded, including her captain, and several other officers.

The *Wasp* soon repaired her damage, and continued on her cruise. On the twenty-first of September, she captured, off the *Madeiras*, her thirteenth prize, the British brig *Atalanta*, of eight guns, and the only one she sent into port. The return of this vessel, after her brilliant cruise, was for a long time fondly looked for by our country ; but all hope has at last vanished of ever seeing her again. There is but little doubt that the brave commander, and the gallant crew, have found a common grave in the waste of ocean ; but they will always live in the fond gratitude and recollection of their country.

The loss of the frigate *President* was severely felt at the time, of which the following is an unvarnished tale.

The blockade of Commodore Decatur's squadron, at New-London, having been continued until after the season had passed in which there existed any prospect of escape, the ships were ordered up the river, and dispersed, while the commodore, with his crew, were transferred to the *President*, then at New-York. A cruise was contemplated, in conjunction with the *Peacock*, the *Hornet*, and the *Tom Bowline* store ship. The commodore, thinking it more safe to venture out singly, appointed a place of rendezvous, and ordered the other vessels to follow. In

consequence of the negligence of the pilot, the **President** struck upon the bar, and remained there thumping for two hours, by which her ballast was deranged, and her trim for sailing entirely lost. The course of the wind prevented from returning into port; he put to sea, trusting to the excellence of his vessel. At daylight, he fell in with a British squadron, consisting of the **Endymion**, **Tenedos** and **Pomone** frigates, and the **Majestic** razee. In spite of every exertion, they gained upon him; the foremost, the **Endymion**, got close under his quarters and commenced firing. The commodore determined to bear up and engage her, with the intention of carrying her by boarding, and afterwards escaping in her, and abandoning his own ship. In this he was prevented by the manœuvring of the enemy, who protracted the engagement for two hours, until the rest of the squadron were fast gaining upon them.

He now assailed the **Endymion**, and in a short time completely silenced her, leaving her a wreck. The **President** was also considerably damaged, having lost twenty-five men, killed and wounded; among the former, Lieutenant **Babit** and **Hamilton**, and acting Lieutenant **Howell**; among the latter, the commodore himself, and midshipman **Dale**, who afterwards died. On the approach of the squadron, the gallant commodore, unwilling to sacrifice the lives of his men in a useless contest, on receiving the fire of the nearest frigate, surrendered. On this occasion we cannot pass in silence the dishonorable conduct of the British officers of the navy, where such ought least to have been expected.

The generous and heroic character of **Decatur** is acknowledged wherever the American flag is known, and requires no testimony in its support, for the British themselves have often declared their admiration of this chivalrous officer. The commodore was taken on board the **Endymion**, for the purpose of acting the miserable farce of surrendering his sword to the officer of a frigate of equal size, but which would have fallen into the hands of the commodore, but for the approach of the squadron. **Decatur** indignantly refused to give up his sword to any one but the commander of the squadron. Another arti-

fice was actually resorted to, in order to satisfy the good people of England that the President was a seventy-four in disguise: she was lightened, laid in dock along side of an old seventy-four, diminished to appearance by being deeply laden. Thus, it seems, a British frigate had captured an American seventy-four. The naval superiority of Great Britain was therefore no longer doubted.

The following account of several naval victories seems almost incredible, but they are too well authenticated to leave a doubt on the mind of those who are willing to credit on the best of human testimony.

Not the least among the exploits of our naval heroes, was the capture of two of the enemy's ships of war by the Constitution, Captain Stewart. Having sailed on a cruise, he discovered two ships, one of which bore up for the Constitution, but soon after changed her course, to join her consort. The Constitution gave chase to both, and at six P. M. ranged ahead of the sternmost, brought her on the quarter, her consort on the bow, and opened a broadside, which was immediately returned. An exchange of broadsides continued until both ships were enveloped in smoke, upon the clearing away of which, the Constitution finding herself abreast of the headmost ship, Captain Stewart ordered both sides to be manned, backed topsails, and dropped into his first position.

The ship on the bow backed sails also. The Constitution's broadsides were then fired from the larboard battery, and in a few moments the ship on the bow, perceiving her error in getting sternboard, filled away with the intention of tacking athwart the bows of the Constitution, while the other fell off entirely unmanageable. The Constitution then filled away in pursuit of the former, and coming within a hundred yards, gave her several raking broadsides, and so crippled her that no further apprehensions were entertained of her ability to escape; the captain therefore returned to the first, which immediately struck. Possession was then taken of her by Lieutenant Hoffman, and proved to be the frigate Cyane, Captain Gordon Falcon, of thirty-four guns.

Captain Stewart then steered in pursuit of the other

vessel, and after a short resistance, in which she suffered considerably, she struck, with five feet water in her hold. She proved to be the sloop of war *Levant*, of eighteen thirty-two pound carronades. The loss on board the two ships amounted to about eighty in killed and wounded; on board the *Constitution* there were four killed and eleven wounded; but the ship received a very trifling injury. On the tenth of March, Captain Stewart entered the harbour of Port Praya with his prizes, and on the eleventh, a British squadron of two sixty gun ships and a frigate appeared off the entrance of the harbour; Captain Stewart, having no faith in his security in this neutral port, made sail with his prize, the *Cyane*, and though closely pursued, had the good fortune to escape into the United States. The *Levant* was recaptured in a Portuguese port, in contempt of the neutral state. These are acts of injustice in which no nation can ever prosper.

The *Peacock*, *Hornet*, and *Tom Bowline*, left New-York a few days after the President, without having received information of her capture. On the 23d of January, 1815, the *Hornet* parted company, and directed her course to Tristan d'Acuna, the place of rendezvous. On the 23d of March, she descried the British brig *Penguin*, Captain Dickinson, of eighteen guns and a twelve pound carronade, to the eastward and southward of the island. Captain Biddle hove to, while the *Penguin* bore down; at forty minutes past one, the British vessel commenced the engagement. The firing was hotly kept up for fifteen minutes, the *Penguin* gradually nearing the *Hornet* with the intention to board, her captain having given orders for this purpose, but was killed by a grape shot; her lieutenant then bore her up, and running her bowsprit between the main and mizzen rigging of the *Hornet*, gave orders to board. His men, however, perceiving the crew of the *Hornet* ready to receive them, refused to follow him.

At this moment, the heavy swell of the sea lifted the *Hornet* ahead, and the enemy's bowsprit carried away her mizzen shrouds and spanker boom, and the *Penguin* hung upon the *Hornet's* quarter, with the loss of her foremast and bowsprit. Her commander then called out that he had surrendered; and Captain Biddle ordered his men

to cease firing. At this moment an officer of the *Hornet* called to Captain Biddle, that a man was taking aim at him in the enemy's shrouds ; he had scarcely changed his position, when a musket ball struck him in the neck, and wounded him severely. Two marines immediately levelled their pieces at the wretch, and killed him before he brought his gun from his shoulder. The *Penguin* had, by that time, got clear of the *Hornet*, and the latter wore round to give the enemy a fresh broadside, when they cried out a second time that they had surrendered. It was with great difficulty that Captain Biddle could restrain his crew, who were exasperated at the conduct of the enemy.

In twenty-two minutes after the commencement of the action, she was taken possession of by Lieutenant Mayo, of the *Hornet*. The *Penguin* was so much injured, that Captain Biddle determined on taking out her crew and scuttling her ; and afterwards sent off his prisoners by the *Tom Bowline*, which by this time had joined him with the *Peacock*. The enemy lost fourteen in killed, and twenty-eight wounded ; the *Hornet*, one killed and eleven wounded ; among the latter, her Lieutenant, Conner, dangerously.

Captain Biddle, being compelled to part from the *Peacock* by the appearance of a British ship of the line, after being closely pursued for several days, effected his escape into St. Salvador, where the news of peace soon after arrived. The capture of the *Cyane*, the *Levant*, and the *Penguin*, took place before the expiration of the time limited by the second article of the treaty of peace.

The exploits of the privateers continued to rival those of our national vessels. In one instance the enemy was compelled to pay dearly for his disregard of the sanctuary of a neutral port. The privateer *Armstrong* lay at anchor in the harbour of Fayal, when a British squadron consisting of the *Carnation*, the *Plantagenet*, and the *Rota*, hove in sight. Captain Reid, of the privateer, discovering, by the light of the moon, that the enemy had put out his barges, and was preparing to attack him cleared for action, and moved near the shore. Four boats, filled with men, approached, and making no answer

on being hailed, a fire was opened upon them, which was returned, but they soon called out for quarters, and were permitted to haul off. They then prepared for a more formidable attack; the privateer was now anchored within a cable's length of the shore, and within pistol shot of the castle.

The next day they sent a fleet of boats, supported by the *Carnation*, which stood before the harbour, to prevent the escape of the privateer. At midnight the boats approached a second time, to the number of twelve or fourteen, manned with several hundred men. They were suffered to approach along side of the privateer; and, without waiting an attack, they were assailed with such astonishing fury, that, in forty minutes, scarcely a man of them was left alive. During these attacks the shores were lined with the inhabitants, who, from the brightness of the moon, had a full view of the scene. The governor, with the first people of the place, stood by and saw the whole affair. After the second attack, the governor sent a note to the commander of the *Plantagenet*, Captain Lloyd, requesting him to desist, but was answered, that he determined to have the privateer at the risk of knocking down the town.

The American consul having communicated this information to Captain Reid, he ordered his crew to save their effects as fast as possible, and to carry the dead and wounded on shore. At daylight the *Carnation* stood close to the *Armstrong*, and commenced a heavy fire; but being considerably cut up by the privateer, she hauled off to repair. Captain Reid now thinking it useless to protract the contest, on her re-appearance, scuttled his vessel, and escaped to shore. The British loss amounted to the astonishing number of one hundred and twenty killed, and one hundred and thirty wounded; that of the Americans was only two killed and seven wounded. Several houses in the town were destroyed, and some of the inhabitants wounded.

Before closing this chapter, it may not be improper to make a few remarks on war generally. In its most *civilized* modes of destruction, it is, indeed, a dreadful scourge. The distress which it occasions is incalculable

and immeasurable; and we may venture a declaration, that all the benefit ever derived from the practice of mutual destruction, can never balance the evils, even could they be realized.

That the mode of savage warfare is more dreadful than that of the more civilized, is undoubted; but the inference is not, therefore, in favour of hostilities in any degree. That the loss of blood, and treasure, and moral feeling, are more than a fair equivalent for any supposed benefits in expectation, is evident to every reflecting mind, even without bringing into the account the dreadful inroads which it makes in the domestic circle. But, if we add to this the violence which it does to the principles of the Christian religion, who shall fathom it?

CHAPTER XV.

Operations of the Army on the Frontiers.

General Brown, and his officers, were employed in disciplining the troops, and collecting forces, destined to dislodge the British from the American posts which they still occupied. In the beginning of July, the American forces amounted to but two brigades of regulars, and one of New-York volunteers, under Generals Porter and Swift, with a few Indians.

In the meantime, the force of the enemy, under General Drummond, had been greatly increased, by the addition of a number of veteran regiments, which, since the pacification of Europe, Great Britain had been enabled to send to this country.

The first attack was on Fort Erie, which was garrisoned by one hundred and seventy men, which was taken by surprise. The second attempt was upon Major General Riall, who occupied an entrenched camp at Chippewa. This led to the first regular pitched battle during the war, and victory declared for the Americans, and the British were compelled to retire into the camp.

The events of the war now began to thicken, and us

character assumed the most sanguinary aspect. The victory already obtained by the Americans over men superior in numbers and discipline, enraged General Drummond to madness. But the enemy was obliged to fall back to Queenstown, and finally took post at Burlington Heights. The flush of victory on one side, and the pride of military glory on the other, led to deeds of intrepid daring unexampled in the former progress of the war. Skirmishing was constant and severe, and every movement seemed to be of a decisive character. In these rencontres, the loss on both sides, especially of officers, was very great.

A specimen of the obstinate perseverance of the American troops, was exhibited near the cataracts of Niagara, which has few parallels. The enemy occupied an eminence well fortified, and defended by thrice the number of men mustered by the Americans, while the latter sustained the unequal conflict more than an hour, when orders were given to *advance, and charge the enemy's heights*, and break the British line. But the order was countermanded.

The British now pressed forward on the ninth, which, with wonderful firmness, withstood the attack of their overwhelming numbers; but reduced at length to nearly one half, and being compelled, at every moment, to repel fresh charges of the British, Colonel Leavenworth despatched a messenger to General Scott, to communicate its condition. The general rode up in person, roused the flagging spirits of his brave men with the pleasing intelligence that reinforcements were expected every moment, and besought them to hold their ground.

Lieutenant Riddle, already well known as a reconnoitering officer, was the first to come to the assistance of his fellow soldiers, having been drawn to the place by the sound of the cannon while out with a scouting party. The same circumstance induced General Brown to proceed rapidly to the scene of action, giving orders to General Ripley to follow with the second brigade. On his way he was met by Major Jones, and, from his information, he was induced to order up General Porter, with the volunteers together with the artillery.

So far, the Americans had repelled every attack with the most unyielding courage, but the situation of the brigade was very critical. The desperate efforts of the troops led General Riall to overrate the numbers to which he was opposed, and he sent to General Drummond for reinforcements.

About this time an awful pause ensued between the two armies; for a time no sound broke upon the stillness of the night, but the groans of the wounded, mingling with the distant din of the cataract of Niagara. The shattered regiments were consolidated into one brigade, and placed as a reserve under Colonel Brady, who, though severely wounded, refused to quit the field. The silence was once more interrupted by the arrival of General Ripley's brigade, Major Hindman's artillery, and General Porter's volunteers, and, at the same time, of General Drummond, with reinforcements.

In the meantime, that accomplished young officer, Major Jessup, who had been ordered, in the early part of the action, to take post on the right, had succeeded, during the engagement, after encountering great difficulty, in turning the left flank of the enemy. At the present moment, taking advantage of the darkness of the night, and the incaution of the enemy, he threw his regiment in the rear of their reserve, and, surprising one detachment after another, made prisoners of so many of their officers and men, that his progress was greatly impeded. The laws of war would have justified him in putting them to death; "but the laurel, in his opinion, was most glorious when entwined by the hand of mercy;" he, therefore, spared them, under circumstances where they certainly would not have spared him.

One of his officers, Captain Ketchum, had the good fortune to make prisoner of General Riall, and of the aid of General Drummond; the latter a most fortunate circumstance, as it prevented the concentration of the British force, contemplated by that officer, before the Americans were prepared for his reception. After disposing of his prisoners, Major Jessup felt his way to the place where the hottest fire was kept up on the brigade to which he belonged, and drew up his regiment behind a fence on

the side of the Queenstown road, but in the rear of a party of British infantry, drawn up on the opposite side of the same road; he suddenly gave them a destructive fire, on which they broke and fled. "The major," says General Brown, "showed himself to his own army in a blaze of fire." He was ordered to form on the right of the second brigade.

The following instance of generalship, by which this sanguinary contest was decided, is of so daring a nature, and so completely develops the American character, that it will be inserted entire.

General Ripley's brigade had by this time been formed for action, when orders were given for it to advance to the support of General Scott, against whom a fire was now directed, which he could not long withstand. General Ripley, with the quick discernment which characterizes the real commander, seeing that too much time would be lost before he could make his way through the skirt of the woods in the darkness of the night, decided at once, upon his own responsibility, to adopt the only measure from which he saw a hope; and which being made known to the commander in chief, he instantly sanctioned.

The enemy's artillery occupied a hill, which was the key to the whole position, and it would be in vain to hope for victory, while they were permitted to retain it.

Addressing himself to Colonel Miller, he inquired, whether he could storm the batteries at the head of the twenty-first, while he would himself support him with the younger regiment, the twenty-third. To this the wary but intrepid veteran replied, in an unaffected phrase, **I WILL TRY, SIR**;—words, which were afterwards given as the motto of his regiment.

The twenty-third was formed in close column, under its commander, Major M'Farland, and the first regiment, under Colonel Nicholas, was left to keep the enemy in check. The two regiments moved on to one of the most perilous charges ever attempted; the whole of the artillery opened upon them as they advanced, supported by a powerful line of infantry. The twenty-first advanced steadily to its purpose; the twenty-third faltered on receiving the deadly fire of the enemy, but was soon rallied

by the personal exertions of General Ripley. When within a hundred yards of the summit, they received another dreadful discharge, by which Major M'Farland was killed, and the command devolved on Major Brooks. To the amazement of the British, the intrepid Miller firmly advanced, until within a few paces of their line, when he impetuously charged upon the artillery, which, after a short but desperate resistance, yielded their whole battery, and the American line was in a moment formed in the rear, upon the ground previously occupied by the British infantry.

During the charge, General Riall was taken prisoner, and the effect may easily be imagined. But this brilliant exploit seemed to spur on the enemy to redoubled exertions. Being reinforced, the British marched with quick step on the Americans, who reserved their fire until it could become deadly. The whole British division came within twenty paces of the lines, when the well directed fire from our troops put them into confusion. But they rallied to the attack, and the conflict became tremendous. But the enemy yielded, and retired down the hill. The contest was, however, soon renewed by the British, with the same results.

Disheartened by these repeated defeats, the British were on the point of yielding the contest, when they received fresh reinforcements from fort Niagara, which revived their spirits, and induced them to make another and still more desperate struggle. After taking an hour to refresh themselves, and recovering from their fatigue, they advanced with a new and more extended line, and with confident hopes of being able to overpower the Americans, who thus far had been denied both refreshment and repose.

Our countrymen had stood to their arms during all this time, their canteens exhausted, and many almost fainting with thirst; and, from the long interval, they had begun to cherish hopes that the enemy had yielded. In this they were disappointed; but on discovering the approach of the British, their courageous spirit returned, and they resolved never to yield the glorious trophies of their victory, until they could contend no longer.

Battle of Sackett's Harbour, May 29, 1813.—Page 269.

Battle of Bridgewater, July 25, 1813.—Page 345.

The British delivered their fire at the same distance as on the last onset, which was returned by the Americans with the same deadly effect; but they did not fall back with the same precipitation; a fresh line supplied the place of the first, and the whole steadily advanced.

A conflict, dreadful beyond description, ensued; the twenty-first, under its brave leader, firmly withstood the shock. The right and left repeatedly fell back, but were again rallied by the general, by Colonels Miller, Nicholas, and Jessup. At length the two lines closed with each other on the very summit of the hill, which they contested with terrific violence at the point of the bayonet.

Such was the obstinacy of the contest, that many battalions, on both sides, were forced back, and the contending parties became mingled with each other. Nothing could exceed the desperation of the conflict at the point where the cannon was stationed. The enemy having forced himself into the very midst of Major Hindman's artillery, this officer was compelled to spike two of his pieces, and was warmly engaged across the carriages and guns. General Ripley now pressing upon the enemy's flanks, compelled them to give way, and the centre soon following the example, the whole British line fled a third time, and no exertions of their officers could restrain them, until they placed themselves out of the reach of the musketry and artillery. The British being now completely beaten, retired beyond the borders of the field, leaving their dead and wounded.

The loss on this occasion was in proportion to the obstinacy of the conflict, the whole being seventeen hundred and twenty-nine; of which the British amounted to twenty-seven more than the Americans.

The intention of the American commander was to renew the action in the morning, but finding that he had but fifteen hundred men fit for duty, and that the British were drawn up in considerable force, General Ripley determined not to commence an attack. He then retreated to Erie, and extended its defences. Having been reinforced by a thousand men, the enemy appeared before Fort Erie on the 3d of August, and commenced with regular approaches. By the 7th, the defences were sufficient to keep the enemy

at bay. Until the 14th, the cannonade was incessant, and the enemy gained ground, but in skirmishes, the Americans were generally victorious.

General Gaines now commanded at Erie, and Colonel Drummond was preparing to assail him. At half-past two in the morning, the attack was commenced by three columns. On the second attempt, the British gained the parapet, and the enemy received the orders of Colonel Drummond, to "*give no quarter!*" The order was faithfully executed, and a terrible strife ensued. Colonel Drummond was shot in the breast, but the enemy still maintained their position; but they were finally defeated.

The British loss in this assault was two hundred and twenty-two killed, including fourteen officers of distinction; one hundred and seventy-four wounded, and one hundred and eighty-six prisoners. The Americans lost seventeen killed, fifty-six wounded, and ten prisoners.

Nothing further of particular importance transpired, until the seventeenth of September, when General Brown, observing that the enemy had just completed a battery, which could open a most destructive fire, the next day planned a sortie, which has been considered a military chef d'œuvre. The British force consisted of three brigades, of one thousand five hundred men each, one of which was stationed at the works in front of Fort Erie, the other two occupied a camp two miles in the rear.—The design of General Brown was to "storm the batteries, destroy the cannon, and roughly handle the brigade on duty, before those in reserve could be brought up." A road had previously been opened by Lieutenants Riddle and Frazer, in a circuitous course through the woods, within pistol shot of the flank of the line of batteries, and with such secrecy as to have escaped the notice of the enemy.

At two o'clock, the troops were drawn up in readiness to make the sortie. The division commanded by General Porter, was composed of riflemen and Indians under Colonel Gibson, and two columns, one on the right, commanded by Colonel Wood, the left commanded by General Davis, of the New-York militia; this was to proceed through the woods, by the road which had been opened

while the right division of the troops, in the ravine already mentioned, was to be stationed between the fort and the enemy's works, under General Miller, with orders not to advance until General Porter should have engaged their flank.

The command of General Porter advanced with so much celerity and caution, that when they rushed upon the enemy's flank they gave the first intimation of their approach. A severe conflict for a moment ensued, in which those gallant officers, Colonel Gibson, and Colonel Wood, fell at the head of their columns, and the command devolved on Lieutenant Colonel M'Donald, and Major Brooks. In thirty minutes possession was taken of both batteries in this quarter, together with a block-house in the rear, and the garrison made prisoners. Three twenty-four pounders were rendered useless, and their magazine blown up by Lieutenant Riddle, who narrowly escaped the effects of the explosion.

At this moment the division of General Miller came up; General Brown having heard the firing had ordered it to advance. In conjunction with Colonel Gibson's column, he pierced between the second and third line of batteries, and, after a severe contest, carried the first of these. In this assault General Davis fell, at the head of his volunteers. The whole of these batteries, and the two block houses, being in the possession of the Americans, General Miller's division inclined to the more formidable batteries toward the lake shore. At this moment they were joined by the reserve under General Ripley. Here the resistance was more obstinate, the work being exceedingly intricate, from the successive lines of entrenchments, contrived with studied complexity; a constant use of the bayonet was the only mode of assailing them; the enemy had, also, by this time, received considerable reinforcements. General Miller continued to advance, although suffering severe loss in some of his valuable officers: Colonel Aspinwall was badly wounded, and Major Trimble dangerously. The twenty-first, under Lieutenant Colonel Upham, forming a part of the reserve, and part of the seventeenth uniting with the corps of General Miller, charged rapidly upon the remaining bat-

tery, which was instantly abandoned by the British infantry and artillery.

General Ripley now ordered a line to be formed, for the protection of the detachments engaged in destroying the batteries, and was engaged in making arrangements for following up, against the rear of General Drummond, the success which had so far transcended expectation, when he received a wound in the neck, and fell by the side of Major Brooks; he was immediately transported to the fort. The objects of the sortie having been completely effected, General Miller called in his detachments, and retired in good order, with the prisoners, and the trophies of this signal exploit. The American loss in this affair was five hundred and eleven, that of the enemy upwards of a thousand, besides their cannon.

On the eighteenth of October, a detachment of nine hundred Americans was ordered to destroy some stores at Lyon's Creek, which they effected, after encountering a party of twelve hundred. The object was effected, after the loss of sixty-seven killed, wounded and missing.

During the season several expeditions were planned, but to little purpose. Major Croghan commanded one destined to regain Michilimackinack, but the main object was unsuccessful. He effected a landing, but his force was too feeble, and the plan was given up as hopeless. He merely destroyed the establishments at St. Mary's and St. Joseph. General M'Arthur made an incursion into Canada, dispersing some detachments, destroying their stores, and taking one hundred and fifty prisoners, returned without loss.

In the spring of 1814, Commodore Barney took the command of a small flotilla of gunboats to protect the inlets, and small rivers, that fall into Chesapeake Bay. About the 1st of June the enemy entered the Chesapeake Bay, and renewed their ravages with greater severity than they had done the past year. Sharp and frequent rencounters took place upon the water, and upon the land; but the enemy succeeded in laying waste the country, and carrying off the negroes, through the months of June and July.

About the middle of August, the British entered the

Chesapeake with a fleet of about sixty sail, including transports, under Admiral Cockburn, and landed about six thousand men at Benedict, on the Patuxent, under the command of General Ross.

On the 22d, General Ross reached the Wood-yard, (so called) twelve miles from Washington, where Commodore Barney caused a large flotilla of gunboats to be destroyed, to prevent their falling into the hands of the enemy.

On the 23d, General Ross reached Bladensburg, six miles from Washington, where he dispersed the militia, after a short resistance, and advanced to the city. Commodore Barney had assembled a small force in defence of the capital, with several eighteen pounders, and made a stand; but he was soon overpowered by numbers, wounded and taken prisoner, and the capital fell into the hands of the enemy. The navy yard was destroyed.

By order of General Ross, the capitol, the president's house, and executive offices, were burnt. The enemy retired on the night of the 25th, by rapid marches, regained their ships, and embarked.

The American ladies, always conspicuous in the history of America, for their patriotic conduct in times of difficulty and danger, never appeared so lovely in their zeal for their country.

The first object of attack, it was rightly conjectured, would be Baltimore. The cities of Philadelphia and New-York waited the result with as much anxiety, as if their fate depended upon its successful issue. In this they perhaps had reason; for should Baltimore fall, during the panic which succeeded the capture of Washington, and before the other cities would have time to place themselves in an attitude of defence, they could make but a feeble resistance.

After the first moment of despondency, occasioned by the capture of Washington, had subsided in Baltimore, and it was discovered that the place would not be assailed immediately, the inhabitants set about making preparations for defence. Under the direction of General Smith, a ditch was opened, and a breastwork thrown up by the inhabitants, on the high ground to the north-east, (to effect which every class of people united,) so as completely to

protect the town in the only quarter in which it was accessible by land forces.

In a few days, a considerable number of militia arrived from Pennsylvania and Virginia; and the spirits of the inhabitants were greatly animated by the arrival of the naval veteran, Commodore Rogers, with his marines, who took possession of the heavy batteries on the hill.

A brigade of Virginia volunteers, together with the regulars, was assigned to General Winder, and the city brigade to General Striker; the whole under command of Major-General Smith; the two latter, distinguished revolutionary officers. General Striker had served from the commencement to the conclusion of that war, and shared in many important battles. The approach to the city by water, was defended by Fort M'Henry, commanded by Major Armistead, with about sixty artillerymen, under Captain Evans, and two companies of sea fencibles, under Captains Bunbury and Addison; of these, thirty-five were on the sick list.

As this number was insufficient to man the batteries, Major Armistead was furnished with two companies of volunteer artillery, under Captain Berry and Lieutenant Pennington, and a company under Judge Nicholson, (chief justice of Baltimore county,) which had tendered its services. Besides these, there was a detachment of Commodore Barney's flotilla, under Lieutenant-Colonel Stewart and Major Lane, consisting of detachments from the twelfth, fourteenth, and thirty-sixth regiments of the United States troops, which were encamped under the walls of the fort. The total amounted to about one thousand men.

Two batteries on the right of Fort M'Henry, upon the Patapsco, to prevent the enemy from landing during the night, in the rear of the town, were manned, the one by Lieutenant Newcomb, with a detachment of sailors; the other, by Lieutenant Webster, of the flotilla; the former was called Fort Covington, the latter, the City Battery.

It was equally important to the safety of the city, that in the event of an attack by land and naval forces, both should be repelled; for in case Fort M'Henry was silenced by the shipping, there would be nothing to prevent the

destruction of the town; and if the land forces of the enemy were successful, the fort could no longer be of any avail, and would even be untenable. To the defence of Fort M'Henry, and to the repulse of the British from the lines, the inhabitants looked for safety. Independently of the devastating orders of Cochrane, and the recent scenes at Washington and Alexandria, this city was a selected object of the vengeance of the enemy, in consequence of her active and patriotic exertions during the war. No one can imagine to himself a just picture of the state of anxious feeling, among fifty thousand people of all ages and sexes, for the approaching crisis, which would determine the safety or destruction of their city.

And even in case of successful resistance, the most painful incertitude hung over the fate of those who were to risk their lives in its defence; not strangers or mercenaries, but their bosom friends, their brothers, their sons and husbands: every one, even old men and boys, who could wield a musket, were found in the ranks.

The committee of safety, composed of those advanced in life, and the most influential citizens, (among whom was the respectable Colonel Howard, a hero of the revolution,) took a large share in the preparations to meet the approaching danger.

The British army having re-embarked on board the fleet in the Patuxent, Admiral Cochrane moved down the river, and proceeded up the Chesapeake; and, on the morning of the eleventh of September, appeared at the mouth of the Patapsco, about fourteen miles from the city of Baltimore, with a fleet of ships of war, and transports, amounting to fifty sail.

On the next day, the land forces, to the number of at least six thousand men, the veterans of Wellington, debarked at North Point, and, under the command of General Ross, took up their march for the city.

General Stricker claimed, for the city brigade under his command, the honour of being the first to meet the invader, and was accordingly detached by General Smith, in anticipation of the landing of the British troops. On the eleventh General Stricker proceeded on the road to North Point, at the head of three thousand and two hun-

dred effective men, consisting of the fifth regiment, under Lieutenant Colonel Sterett, five hundred and fifty strong; six hundred and twenty of the sixth, under Lieutenant Colonel M'Donald; five hundred of the twenty-seventh, under Lieutenant Colonel Long; five hundred and fifty of the thirty-ninth, under Lieutenant Colonel Fowler; seven hundred of the fifty-first, under Lieutenant Colonel Amey; one hundred and fifty riflemen, under Captain Dyer; one hundred and fifty cavalry, under Lieutenant Colonel Biays; and the Union Artillery, of seventy-five men, and six four pounders, under Captain Montgomery, (attorney general of the state.) A light corps of riflemen and musketry, under Major Randal, taken from General Stanbury's brigade, and the Pennsylvania volunteers, were detached to the mouth of Bear Creek, with orders to co-operate with General Stricker, and to check any landing which might be effected in that quarter.

At six o'clock, P. M. General Stricker reached the meeting-house, near the head of Bear Creek, seven miles from the city. Here the brigade halted, with the exception of the cavalry, who were pushed forward to Gorsuch's farm, three miles in advance, and the riflemen, who took post near the blacksmith's shop, two miles in advance of the encampment.

The next morning, (the twelfth,) at seven o'clock, information was received from the videttes, that the enemy were debarking troops under cover of their gun vessels, which lay off the bluff at North Point, within the mouth of the Patapsco River. The baggage was immediately ordered back under a strong guard, and General Stricker moved forward the fifth and twenty-seventh regiments, and the artillery, to the head of Long Log Lane, resting the fifth with its right on the head of a branch of Bear Creek, its left on the main road, while the twenty-seventh was posted on the opposite side of the road, in a line with the fifth. The artillery was posted at the head of the lane, in the interval between these two regiments. The thirty-ninth was drawn up three hundred yards in the rear of the twenty-seventh, and the fifty-first the same distance in the rear of the fifth; the sixth regiment was

drawn up as a reserve, within sight, half a mile in the rear of the second line.

Thus judiciously posted, the general determined to wait an attack, having given orders that the two regiments composing the front line, should receive the enemy, and, if necessary, fall back through the fifty-first and thirty-ninth, and form on the right of the sixth, posted in reserve.

The general now learned, that the British were moving rapidly up the main road; and at the moment when he expected their approach to be announced by the riflemen, stationed in the low thick pine and furs, in advance, greatly to his chagrin, he discovered this corps falling back upon the main position, having listened to a groundless rumour, that the enemy were landing on Back river, to cut them off. This part of the general's plan having been frustrated, he placed the riflemen on the right of his front line, by this means better securing that flank. The videttes soon after bringing information that a party of the enemy were, in a careless manner, carousing at Gorsuch's farm, several of the officers offered their services to dislodge him. Captains Levering's and Howard's companies, from the fifth, about one hundred and fifty in number, under Major Heath, of that regiment; Captain Aisquith's, and a few other riflemen, in all about seventy; a small piece of artillery, under Lieutenant Stiles, and the cavalry, were pushed forward, to chastise the insolence of the enemy's advance, and to evince a wish on the part of the American army to engage.

The detachment had scarcely proceeded half a mile, when they came in contact with the main body of the enemy; a sharp skirmish ensued, in which Major Heath's horse was shot under him, and several of the Americans killed and wounded, but not unrevenged, for in this affair the enemy lost their commander in chief, General Ross.

This officer had imprudently proceeded too far, for the purpose of reconnoitering, when he was killed by one of the company of Captain Howard, who was in the advance.

After the death of Ross, the command devolved on Colonel Brook, who continued to push forward, notwithstanding this occurrence. The American detachment fell

back; and the general conceiving the two companies of Howard and Levering to be too much fatigued to share in the approaching conflict, they were ordered to form on the reserve, not without a request on their part to be permitted to share in the perils of their townsmen.

At half past two o'clock, the enemy commenced throwing rockets, which did no injury; and immediately Captain Montgomery's artillery opened their fire upon them, which was returned by a six pounder and howitzer upon the left and centre. The fire was brisk for some minutes, when the general ordered it to cease on his side, with a view of bringing the enemy into close canister distance.

Perceiving that the efforts of the British were chiefly directed against the left flank, the general brought up the thirty-ninth into line on the left of the twenty-seventh, and detached two pieces of artillery on the left of the thirty-ninth; and still more completely to protect this flank, which was all important, Colonel Amey, of the fifty-first, was ordered to form his regiment at right angles with the line, resting his right on the left of the thirty-ninth. The movement was badly executed, and created some confusion in that quarter, but was soon rectified with the assistance of the general's aids and Major Stevenson, and the brigade majors, Calhoun and Frailey.

The enemy's right column now displayed, and advanced upon the twenty-seventh and thirty-ninth. Unfortunately, at this juncture, the fifty-first, from some sudden panic, after giving a random fire, broke and retreated in such confusion as rendered it impossible to rally it, and occasioned the same disorder in the second battalion of the thirty-ninth.

The fire by this time became general, from right to left; the artillery poured an incessant and destructive stream upon the enemy's left column, which endeavoured to shelter itself behind a log house, but this was instantly in a blaze; Captain Sadtler having taken the precaution to fire it, as soon as it was abandoned by him and his yagers.

About ten minutes past three, the British line came on with a rapid discharge of musketry, which was well returned by the fifth, the twenty-seventh, and the first battalion of the thirty-ninth, who maintained their ground

in spite of the example set by the intended support on the left

The whole of the general's force with this diminution, scarcely amounted to fourteen hundred, to which was opposed the whole of the enemy. The fire was incessant, until about twenty-five minutes before four o'clock, during which time General Stricker gallantly contended against four times his numbers; but finding that the unequal contest could be maintained no longer, and that the enemy was about to outflank him, in consequence of the flight of the fifty-first, he was compelled to retire upon his reserve, which he effected in good order. Here he formed his brigade, but the enemy not thinking it advisable to pursue, he fell back, and took post on the left of the line, half a mile in advance of the intrenchments, where he was joined by General Winder, who had been stationed on the west side of the city, but was now ordered with the Virginia brigade, and Captain Bird's United States dragoons, to take post on the left of General Stricker.

The conduct of the Baltimore brigade, with the exception of the fifty-first, and the second battalion of the thirty-ninth, who were seized with the panic to which raw troops are so much subject, deserved the highest praise. Veterans could not have done more. Their loss, in killed and wounded, amounted to one hundred and sixty-three, (amongst whom were some of the most respectable citizens of Baltimore,) about an eighth of the force engaged. Adjutant James Lowry Donaldson, of the twenty-seventh, (an eminent lawyer,) was killed in the hottest of the fight. Major Heath and Major Moore, and a number of other officers, were wounded. The loss of the British was nearly double that of the Americans, according to their own acknowledgment, and probably much greater. This unexpected resistance had a happy effect upon the enemy; in their official statements, they computed the American force at six thousand, a great proportion of regulars, and estimated our loss at one thousand, from which we may infer their opinion of the manner in which they were received.

In the mean time the naval attack had already com

menced from five bomb vessels, at the distance of two miles ; when finding themselves sufficiently near, they anchored, and kept up an incessant bombardment, while they were at such a distance as to be out of the reach of the guns of the fort. The situation, although painfully inactive, was highly perilous ; yet every man stood to his post without shrinking. One of the twenty-four pounders, on the south-west bastion, under Captain Nicholson, was dismounted, and killed his second lieutenant and wounded several of his men. The enemy now approached somewhat nearer, so as to be within striking distance. A tremendous fire was instantly opened from the fort, which compelled him precipitately to gain his former position. The bombardment was kept up during the whole day and night. The city, thus assailed on both sides, awaited the result with death-like silence, and yet no eye was closed in sleep.

Suddenly, about midnight, a tremendous cannonade was heard in the direction of the fort, and the affrighted population believed that all was over. Their fears were soon quieted, by the information that some barges of the enemy, the number not known, had attempted to land, but were compelled to draw off with all possible haste, after great slaughter, by Lieutenants Newcomb and Webster, who commanded the city battery and Fort Covington. By the next morning the bombardment ceased, after upwards of fifteen hundred shells had been thrown ; a large portion of which burst over the fort, and scattered their fragments amongst its defenders ; a great number fell within the works, and materially injured two of the public buildings, and two slightly.

The enemy, not willing to abide such rough handling, retreated under cover of a dark and stormy night, and in the morning General Winder was detached in pursuit, but the time which had elapsed was sufficient for embarkation, and the rear could not be cut off. The next day the fleet descended the bay, to the great joy of the inhabitants of Baltimore.

We shall now return with our readers to the operations on the northern frontier. About the first of September, Sir George Prevost led his army to Plattsburgh, while

the fleet proceeded up the lake on his left, to make a simultaneous attack by land and water. Before this, little of consequence had transpired in this quarter.

The peace in Europe permitted the English government to transport large bodies of troops, and they had already sent on a considerable army to Canada. Fourteen thousand of these were organized under Sir George, and the remainder were sent to oppose General Brown on the Niagara.

To oppose this overwhelming force, General Macomb had but fifteen hundred regulars, including new recruits and invalids. The works were in no state of defence, and the stores and ordnance were in great disorder. The British force took possession of Champlain on the third of September, and, from the proclamations and impressments of wagons and teams in this vicinity, it was soon discovered that their object was an attack on Plattsburgh. Not a minute was to be lost in placing the works in a state of defence; and in order to create an emulation and zeal among the officers and men, they were divided into detachments, and stationed in the several forts; the general declaring, in orders, that each detachment was the garrison of its own work, and bound to defend it to the last extremity. At the same time he called on General Mooers, of the New-York militia, and arranged with him plans for calling out the militia en masse. The inhabitants of Plattsburgh fled with their families and effects, excepting a few men, and some boys, who formed themselves into a company, received rifles, and were exceedingly useful.

In this extremity General Mooers collected about seven hundred militia, and small detachments were posted so as to watch and harass the enemy. Trees were felled, and every impediment put in the way of their march, and some skirmishes ensued. At daylight, on the sixth it was ascertained that the enemy were advancing in two columns by each of the roads, dividing at Sampson's, a little below Chazy village. The column on the Beckman road approached rapidly; the militia skirmished a little with its advanced parties, but which, with the exception of a few brave men, soon broke, and fled in the great-

est disorder. A detachment of two hundred and fifty men, under Major Wool, had been marched to their support, and to show them an example of firmness, but it was found unavailing.

Finding that the enemy's columns had penetrated within a mile of Plattsburgh, orders were received for Colonel Appling to return from his position at Dead Creek, and fall on the enemy's right flank. The colonel fortunately arrived just in time to save his retreat, and to fall in with the head of a column debouching from the woods. He poured a destructive fire from his riflemen, and continued to annoy the column until he formed a junction with Major Wool. Notwithstanding that considerable execution was done by the field pieces, the enemy still continued to press forward in column; considerable obstructions were, however, thrown in their way by the removal of the bridge, and by the fallen trees; a galling fire was also kept up from the galleys as they passed the creek.

Plattsburgh is on the northeast side of the Saranac, near its entrance into Lake Champlain, directly opposite the American works. The town was of course abandoned, and occupied by the British. Attempts were made to take possession of the bridge, but it was resolutely guarded by the Americans. When our troops had passed the bridge, the planks were raised, and used for a breast-work.

The enemy, now masters of the village, instead of attempting to carry the American works on the opposite side of the river, which their vast superiority of force might have enabled them to do, contented themselves with erecting works, whence they continued to annoy the Americans, and constantly skirmishing at the bridges and fords. By the eleventh, the fifth day of the siege, a considerable force of New-York and Vermont militia, which had been continually collecting, lined the Saranac, and repelled the attempts of the British to cross, while, at the same time, a considerable body was sent to harass their rear. There was scarcely an intermission to the skirmishes which took place between them and the militia who acted, after the first day, with great intrepidity

The American regulars, at the same time, laboured incessantly to extend and strengthen their works. During this time, a handsome affair was achieved by Captain M'Glassin, who, crossing the river in the night, assailed the British regulars, more than three times his number, stationed at a masked battery, which had been for some days preparing, drove them from their posts, and demolished their works.

The principal cause of delay, which was fortunate for the Americans, was the momentary expectation of the fleet, which was intended to co-operate. On the morning of the eleventh, at eight o'clock, the look out boat of Commodore M'Donough announced its approach. It consisted of the *Confiance*, carrying thirty-nine guns, twenty-seven of which were twenty-four pounders; the brig *Linnet*, of sixteen guns; the sloops *Chub* and *Finch*, each carrying eleven guns; thirteen galleys, five of which carried two, and the remainder one gun. The commodore at this moment lay at anchor in Plattsburgh bay, and intended in that situation to receive the enemy. His fleet consisted of the *Saratoga*, carrying twenty-six guns, eight of which were long twenty-four pounders; the *Eagle*, of twenty guns; the *Ticonderoga*, of seventeen, the *Preble*, seven; and ten galleys, six of which carried two, and the remainder one gun. Besides the advantage which the enemy possessed, in being able to choose their position, their force was much superior. The number of guns in the British fleet amounted to ninety-five, and of men to upwards of a thousand; while that of the Americans was eighty-six, and the number of men less by two hundred. One of the American vessels had been built with despatch almost incredible. Eighteen days before, the trees of which it was constructed, were actually growing on the shores of the lake.

The American vessels were moored in line, with five gunboats and galleys on each flank. At nine o'clock, Captain Downie, the British commander, anchored in line, abreast of the American squadron, at about three hundred yards distance, the *Confiance* opposed to the *Saratoga*; the *Linnet* to the *Eagle*; the British galleys, and one of the sloops to the *Ticonderoga*, *Preble*, and the left divi-

sion of the American galleys ; the other sloop to the right division.

The importance of the contest which was now impending, will justify us in a particular description.

In this situation the whole force on both sides became engaged ; and at the same moment, as if this had been the signal, the contest commenced between General Macomb and Sir George Prevost. One of the British sloops was soon thrown out of the engagement, by running on a reef of rocks, whence she could not be extricated, while one division of the enemy's galleys was so roughly handled as to be compelled to pull out of the way. But the fate of this interesting day, on which the two rivals for naval superiority were for the second time matched in squadron, depended chiefly on the result of the engagement between the two largest ships.

The American commodore maintained the unequal contest for two hours ; but the greater weight of the enemy's battery seemed to incline the scale of victory, although he suffered prodigiously. The chances against the *Saratoga* were accidentally increased by the commander of the *Eagle*, who not being able to bring his guns to bear as he wished, cut his cable, and anchored between the *Ticonderoga* and *Saratoga*, by which this vessel was exposed to a galling fire from the enemy's brig. The guns on the starboard side had, by this time, been either dismounted or become unmanageable ; the situation of the enemy was but little better ; to both, the fortune of the day depended on the execution of one of the most difficult naval manœuvres—to wind their vessel round, and bring a new broadside to bear.

The *Confiance* assayed it in vain, but the efforts of the *Saratoga* were successful ; a stern anchor was let go, the bower cable cut, and the ship winded with a fresh broadside on the frigate, which soon after surrendered. A broadside was then sprung to bear on the brig, which surrendered in fifteen minutes after. The sloop opposed to the *Eagle* had struck to Captain Henley sometime before, and drifted down the line. Three of the galleys were sunk, the others escaped ; all the rest of the fleet fell into the hands of Commodore M'Donough. By the

time this bloody contest was over, there was scarcely a mast in either squadron capable of bearing a sail, and the greater part of the vessels in a sinking state. There were fifty round shot in the hull of the *Saratoga*, and in the *Confiance* one hundred and five. The *Saratoga* was twice set on fire by hot shot.

The action lasted two hours and twenty minutes. The commander of the *Confiance* was killed, with forty-nine of his men, and sixty wounded. On board the *Saratoga* there were twenty-eight killed, and twenty-nine wounded. Of the first was Lieutenant Gamble; and on board the *Ticonderoga*, Lieutenant Stanbury, (son of General Stanbury, of Maryland.) Among the wounded were Lieutenant Smith, acting Lieutenant Spencer, and midshipman Baldwin. The total loss in the American squadron amounted to fifty-two killed, and fifty-eight wounded. The loss of the enemy was eighty-four killed, one hundred and ten wounded, and eight hundred and fifty-six prisoners, which actually exceeded the number of their captors.

This engagement, so deeply interesting to the two rival nations, took place in sight of the hostile armies. But they were by no means quiet spectators of the scene; a hot engagement was kept up during the whole time; the air was filled with bombs, rockets, sharpnels, and hot balls. Three desperate efforts were made by the British to cross over and storm the American works, in which they were as often repulsed, with considerable loss. An attempt to force the bridge was bravely defeated by a detachment of regulars, and Captain Grosvenor's riflemen. They attempted a ford about three miles above, but were so briskly assailed by a body of volunteers and militia posted in a wood, that the greater part of the detachment was cut to pieces.

The efforts of the enemy naturally relaxed, after witnessing the painful sight, so little expected, of the entire capture of their fleet. The firing was, however, kept up until night; at night the enemy withdrew their artillery, and raised the siege. The plans of Sir George Prevost were completely frustrated, since the Americans had now the command of the lake; even if he were to possess

himself of the American works, it would not serve him any further design; in the meantime, he would be exposed to great danger from the hourly augmentation of the American forces.

Under the cover of the night, he, therefore, sent off all his baggage and artillery, for which he found means of transportation; and, before day the next morning, his whole force precipitately retreated, leaving behind their sick and wounded. Vast quantities of military stores, and munitions of war, were abandoned by them, and still greater quantities were afterwards found hid in marshes, or buried in the ground. They were hotly pursued, a number of stragglers were picked up, and upwards of five hundred deserters came in.

Those of the British army and navy who fell, were interred with the honours of war. The humane attention of the Americans to the wounded, and the politeness and generous attention to the prisoners, were acknowledged in grateful terms by Captain Pryng, (who succeeded Captain Downie,) in his official despatch to the admiralty.

Thus was this portentous invasion most happily repelled, and another of our inland seas made glorious by the victories of free Americans. The "star spangled banner" waved in triumph on the waters of Champlain, as it did on Erie and Ontario. These noble features in our great empire will henceforth be viewed with a very different interest from what they heretofore excited.

The effect of this victory tended to allay party spirit, and produce unanimity in the national legislature. The great cause of bitter complaint against the administration, French influence, was at an end, and the recent conduct of Great Britain towards this country, rendered it impossible for any one to say that she was not wantonly pursuing hostilities, when these causes no longer existed. No one could now be the advocate of Britain.

But, in addition to other circumstances, the neglect experienced by our ministers in Europe, and the shuffling policy of Great Britain, which procrastinated a final adjustment of differences, were well understood, and had their proper effect on our citizens. Our sincere desire for peace was met by the demand for a surrender of a

large portion of territory, and a total relinquishment of the lake shores, a *sine qua non*. To these conditions it is evident our government could not accede, and few were so weak as to believe that the proposition was made with any other view than to prolong the negotiations, and take advantage of circumstances which might intervene.

About this epoch, a convention, composed of delegates from several of the New-England states, met at Hartford, the members of which were opposed to the war. This step occasioned much excitement, and was the subject of many speculations. It was charged with the design of sundering the union of the states; but after a brief session, terminated in an address and remonstrance, or petition to congress, enumerating several objections to the federal constitution. It was presented to several states for approbation, but was uniformly rejected. As to the constitutional right of assembling for the purpose of discussing national subjects, we can have but one voice, unless we abandon republican principles; but whether the motives, the time, and the expected results of this convention, were correct and judicious, is problematical. In the legislature of Pennsylvania, in which the memorial was discussed, the conduct of the memorialists was severely censured.

Our finance now appeared to revive, under the indefatigable industry and great abilities of Mr. Dallas, whom the president selected at this critical moment to fill the office of secretary of the treasury. His plans were characterized by the greatest boldness, but were unfolded in so luminous a manner, as to carry conviction to every mind. He may be said to have plucked up the sinking credit of the nation by the locks. The duties of the secretary at war were, at the same time, discharged by Colonel Monroe, in addition to his other avocations; in which undertaking he exhibited no small courage, for it had become a forlorn hope of popularity; he was happily rewarded by the most fortunate success in all his measures, and by the universal applause of his country.

While the American congress was thus occupied, the public attention was awakened by a most alarming state of affairs to the southward. The Creek war was renew-

ed, and a powerful invasion of Louisiana was threatened. General Jackson, after concluding a treaty with the Creeks, moved his head quarters to Mobile. Here, about the latter end of August, he received certain information, that three British ships of war had arrived at Pensacola, and had landed a large quantity of ammunition and guns, for the purpose of arming the Indians, and had, besides, marched into the fort with three hundred troops. He was also informed that the fleet of Admiral Cochrane had been reinforced at Bermuda, and that thirteen ships of the line, with transports, were daily expected, with ten thousand troops, for the purpose of invading some of the southern states. On the receipt of this information, he immediately wrote to the governor of Tennessee, calling for the whole quota of that state.

On the fifteenth of September, three vessels of war from Pensacola, appeared before fort Boyer, which commands the entrance to Mobile Bay. A proclamation was issued by Colonel Nichols, commanding his majesty's forces in Florida, addressed to the inhabitants of Louisiana, Kentucky, and Tennessee, inviting them to aid the British. He likewise made a proposition to a nest of pirates which infested one of the lakes which communicates with the gulf, to assist in the operations against the Americans in that quarter. This nest of desperadoes amounted to five or six hundred, and their commander, Lafitte, had been outlawed by the American government. In the summer, the establishment had been broken up by Commodore Patterson, but had again organized, and would be a dangerous force, if employed by our enemies, for which service they had large offers.

But what was most humiliating to those who could stoop so low, this alliance was indignantly rejected. Lafitte at first dissembled, until he had drawn from the colonel important information, when he dismissed him with disdain, and immediately dispatched a messenger to Governor Claiborne, who had some time before offered five hundred dollars for his apprehension, and laid before him incontestible proofs of the truth of his declaration. The governor was agreeably surprised at this unexpected trait of generosity, but at first hesitated as to the course

to be pursued; on the approach of danger, however, he issued his proclamation, in which he pledged himself, that those engaged in this illicit course of life should be forgiven, provided they would come forward and aid in the defence of the country. This was joyfully accepted by the Barratarians, as they were called, who tendered their services, and were found eminently useful.

General Jackson having in vain remonstrated with the governor of Pensacola for his unprecedented conduct, determined to march against that place. Having received a reinforcement of two thousand Tennessee militia, which had marched through the Indian country, he advanced to Pensacola to demand redress. On the sixth of November he reached the neighbourhood of that post, and immediately sent Major Peire with a flag to communicate the object of his visit to the governor; but he was forced to return, being fired on from the batteries.—Jackson then reconnoitered the fort, and finding it defended both by British and Indians, he made arrangements for storming it the next day.

The troops were put in motion at day light, and being encamped to the west of the town, the attack would be expected from that quarter; to keep up this idea, part of the mounted men were sent to show themselves on the west, whilst the remainder of the troops passed to the rear of the fort, undiscovered, to the east of the town. His whole force, consisting of a few regulars, a body of militia, and some Choctaw Indians, appeared in view when within a mile of the fort, and advanced firmly to the enemy's works, although there were seven British vessels on their left, and strong batteries of cannon in front. On entering the town, a battery of two cannons, loaded with ball and grape, was opened on the centre column, composed of regulars, and a shower of musketry was poured from the houses and gardens. The battery was soon carried and the musketry silenced.

The governor now made his appearance with a flag, begged for mercy, and offered to surrender the town immediately. This was granted, and every protection afforded to the persons and property of the inhabitants. The commandant of the fort refused to surrender until

midnight, when he evacuated it with his troops, just as the Americans were preparing to make a furious assault. The British withdrew their shipping, and Jackson, having accomplished his purpose, returned to Mobile.

Notwithstanding the negotiations for peace, preparations were made for a formidable invasion of Louisiana, and Governor Claiborne ordered the two divisions of militia to hold themselves in readiness to repel an attack. He also called on the inhabitants to turn out *en masse*, for the defence of their liberties and their homes.

In New-Orleans, the citizens, from the commencement of the war, as if sensible of the feeble help which they could expect from the general government, manifested the greatest alacrity in qualifying themselves for taking the field against an invader. Every man capable of bearing arms, had become a soldier, and perhaps in none was there such frequent and elegant displays of well disciplined volunteer companies dressed in uniform. The wonderful aptitude of the French for the profession of arms, was never more fully exhibited. There were intermingled with them, a number of men who had served in the French armies.

The free people of colour, a numerous class, were permitted, as a privilege of which they were proud, to form volunteer companies, and wear their uniform; some of these were natives, but the greater part had been refugees from St. Domingo. The American and French inhabitants, although sometimes at variance with each other, on this occasion united heartily in dislike to the English, and in a disposition to frustrate their designs.

Hearing of the danger of New-Orleans, General Jackson repaired thither for its defence, and arrived there on the second of December. He put in requisition all the powers of his mind, and took the most active measures to prevent the effects of an expected invasion.

Batteries were constructed in important situations, and every obstruction put in the way of the invaders. He called on the legislature for resources, which were promptly supplied. Colonel Monroe, acting secretary of war, had already forwarded military supplies, and called on the neighbouring governors for a considerable force.

About the fifth of December, certain intelligence was received, that the British fleet, consisting of at least sixty sail, was off the coast to the east of the Mississippi. Commodore Patterson immediately despatched five gun-boats, under the command of Lieutenant Catesby Jones, to watch the motions of the enemy. They were discovered in such force off Cat Island, as to induce the lieutenant to make sail for the passes into Lake Ponchartrain, in order to oppose the entrance of the British. The Sea Horse, Sailing Master Johnson, after a gallant resistance, was captured in the bay of St. Louis.

On the fourteenth, the gun-boats, while becalmed, were attacked by nearly forty barges, and twelve hundred men, and, after a contest of an hour, with this overwhelming force, the flotilla surrendered. The loss of the Americans was forty killed and wounded; among the latter, Lieutenant Spidden, who lost an arm: Lieutenant Jones and M'Keever were also wounded. The loss of the enemy was estimated at three hundred men.

This loss was severely felt, as the enemy was thereby enabled to choose his point of attack, and we were, in a great measure, prevented from watching his motions. But the exertions for defence were neither paralyzed nor abated. The legislature appropriated money, and offered bounties which induced numbers to serve on board the schooner Caroline, and the brig Louisiana. An embargo was laid for three days, and martial law was declared.

Lafitte and his Barratarians, about this time, joined the American forces. The city now exhibited an interesting spectacle; all classes cheerfully preparing for the reception of the invader, and reposing the utmost confidence in Jackson. All was life and bustle, and the female part of the society seemed emulous to share in this affecting scene.

All the principal bayous which communicate with the lake, and the narrow strip of land on the borders of the Mississippi, through the swamps, had been obstructed. There was, however, a communication with Lake Borgne, but little known, called the bayou Bienvenu, used by fishermen; its head near the plantation of General Villere, seven miles below the city. Major Villere had re-

ceived orders from his father to guard this bayou, and he accordingly stationed a guard near its entrance into the lake, at the cabins of some fishermen.

It afterwards appeared, that these wretches had been in the employment of the British. On the twenty-second, guided by them, the enemy came suddenly upon the American guard, and took them prisoners. The division under General Keane, by four o'clock in the morning, reached the commencement of Villere's canal, and, having disembarked, and rested some hours, proceeded through the cane-brake, and, by two o'clock, reached the bank of the river. General Villere's house was suddenly surrounded, as also that of his neighbour, Colonel La Ronde; but this officer, as well as Major Villere, was so fortunate as to effect his escape, and, hastening to the head-quarters, communicated the intelligence.

The alarm gun was fired, and the commander in chief, with that promptitude and decision for which he is so remarkable, instantly resolved on the only course to be pursued, which was, without the loss of a moment's time, to attack the enemy. Coffee's riflemen, stationed above the city, in one hour's time were at the place of rendezvous; the battalion of Major Plauche had arrived from the bayou, and the regulars and city volunteers were ready to march. By six o'clock the different corps were united on Rodrigue's canal, six miles below the city. The schooner *Caroline*, Captain Henley, at the same time dropped down the river. The command of General Coffee, together with Captain Beale's riflemen, were placed on the left, towards the woods; the city volunteers, and men of colour, under Plauche and Duquin; the whole under the command of Colonel Ross, were stationed to the right of these; and, next to them, the two regiments of regulars, the seventh and forty-fourth; the artillery and marines, under Colonel M'Rea, occupied the road. The whole scarcely exceeded two thousand men.

The British force, at this time, amounted to three thousand, and instead of pushing directly towards the city had bivouacked, fully convinced that the most difficult part of the enterprise was already achieved.

Carroll's force was posted on the Gentilly road, to pro

vide against an attack from that quarter. Coffee was directed to turn their right, which rested on the wood, at the distance of half a mile from the river, while the general assailed their strongest position near it. Commodore Patterson, who had gone on board the *Caroline*, dropped down at the same time, and was to open his fire upon the enemy as a signal of attack. The first intimation of the approach of the Americans was a raking broad side from the schooner; their fires extending from the river, enabled the assailants to take deliberate aim. Coffee's men, with their usual impetuosity, rushed upon the right, and entered their camp, while Jackson's troops in front, advanced upon them with great ardour.

The enemy, although taken by surprise, and having several hundreds suddenly killed and wounded, soon formed, and their fires being extinguished, came into action.—A thick fog, which arose shortly after, producing some confusion in the different American corps, Jackson prudently called off his troops, lay on the field that night, and at four in the morning took a position on the other side of the canal of Rodrigue, which formerly had been a mill-race.

The American loss was twenty-four killed, one hundred and fifteen wounded, and seventy-four prisoners, among whom were many of the principal inhabitants of the city. Colonel Lauderdale, of Tennessee, a brave soldier, fell, much lamented. That of the British was estimated at four hundred, in killed, wounded, and missing. They had intended to proceed to New-Orleans the next day, but were induced to be more cautious, having estimated Jackson's force at fifteen thousand men.

The general set to work immediately to fortify his position. This was effected by a simple breastwork, from the river to the swamp, with a ditch in front. To hasten the construction of these works, cotton bags were used, as the cheeks of the embrazures. As the enemy was still annoyed by the *Caroline*, they set to work in constructing batteries to attack her, and on the twenty-seventh, threw hot shot, by which she was set on fire and blown up, about an hour after she was abandoned by her crew. The *Louisiana*, which then took her station, sus

tained the fire of all the batteries, until in imminent danger. In losing her, the whole co-operative naval force would be lost. Her commander, Lieutenant Thompson, after encountering many obstacles, finally succeeded in bringing her near Jackson's position.

After the destruction of the *Caroline*, Sir Edward Pakenham, the British commander in chief, having landed the main body of his army, with a sufficient train of artillery, superintended in person the arrangements for fortifying his position.

On the twenty-eighth, the British general advanced up the levee in force, with the intention of driving Jackson from his entrenchments; and at the distance of half a mile, commenced an attack with rockets, bombs, and a heavy cannonade, as he approached the American works, which were yet unfinished. The *Louisiana*, discharging her broadside upon the enemy's column, caused great destruction; the fire from the American batteries was not less destructive; and after a violent struggle of seven hours, the British general retired.

The loss of the Americans was seven killed and eight wounded; among the former, Colonel Henderson, of Tennessee. That of the British, much more considerable.

On the morning of the first of January, 1815, Sir Edward Pakenham was discovered to have constructed batteries near the American works, and at daylight commenced a heavy fire from them, which was well returned by Jackson. A bold attempt was, at the same time, made to turn the left of the Americans; but in this the enemy was completely repulsed. The British retired in the evening from their batteries, having spiked their guns, and leaving behind a quantity of ammunition. The loss of the Americans, on this occasion, was eleven killed and twenty-three wounded.

On the fourth, General Jackson was joined by two thousand five hundred Kentuckians, under General Adair; and on the sixth, the British were joined by General Lambert, at the head of four thousand men. The British force now amounted to little short of fifteen thousand of the finest troops; that of the Americans to about six thousand, chiefly raw militia, a considerable portion un-

armed, and, from the haste of their departure, badly supplied with clothing. All the private arms which the inhabitants possessed were collected, and the ladies of New Orleans occupied themselves continually in making different articles of clothing. The mayor of the city, Mr Girod, was particularly active at this trying moment.

The British general now prepared for a serious attempt on the American works. With great labour he had completed, by the seventh, a canal from the swamp to the Mississippi, by which he was enabled to transport a number of his boats to the river. It was his intention to make a simultaneous attack on the main force of General Jackson on the left bank, and crossing the river to attack the batteries on the right.

The works of the American general were by this time completed. His front was a straight line of one thousand yards, defended by upwards of three thousand infantry and artillerists. The ditch contained five feet water, and his front, from having been flooded by opening the levees and frequent rains, was rendered slippery and muddy. Eight distinct batteries were judiciously disposed, mounting, in all, twelve guns, of different calibres. On the opposite side of the river there was a strong battery of fifteen guns, and the entrenchments were occupied by General Morgan, with the Louisiana militia, and a strong detachment of the Kentucky troops. To guard against an attack from any other quarter, Colonel Reuben Kemper, with a few men, encountering infinite difficulties, had explored every pass and bayou, and, on this subject, had placed at ease the mind of the commander in chief.

On the memorable morning of the eighth of January, General Packenham, having detached Colonel Thornton, with a considerable force, to attack the works on the right bank of the river, moved, with his whole force, exceeding twelve thousand men, in two divisions, under Major Generals Gibbs and Keane, and a reserve under General Lambert. The first of these officers was to make the principal attack; the two columns were supplied with scaling ladders and fascines.

Thus prepared, the Americans patiently waited the

attack, which would decide the fate of New-Orleans, and perhaps of Louisiana.

The British deliberately advanced in solid columns, over an even plain, in front of the American entrenchments; the men carrying, besides their muskets, fascines, and some of them ladders.

A dead silence prevailed until they approached within reach of the batteries, which commenced an incessant and destructive cannonade; they, notwithstanding, continued to advance in tolerable order, closing up their ranks as fast as they were opened by the fire of the Americans. When they came within reach, however, of the musketry and rifles, these joined with the artillery, and produced such dreadful havoc that they were instantly thrown into confusion.

Never was there so tremendous a fire as that kept up from the American lines; it was a continued stream; those behind loading for the men in front, enabled them to fire with scarcely an intermission. The British columns were literally swept away; hundreds fell at every discharge. The British officers were now making an effort to rally their men, and, in this attempt, their commander, a gallant officer, General Pakenham, was killed.

The two generals, Gibbs and Keane, succeeded in pushing forward their columns a second time; but the second approach was more fatal than the first; the continued rolling fire of the Americans resembled peals of thunder. It was such as no troops could withstand. The advancing columns broke, and no effort to rally them could avail; a few platoons only advanced to the edge of the ditch, to meet a more certain destruction. An unavailing attempt was made to rally them a third time, by their officers, whose gallantry, on this occasion, deserved a better fate, in a better cause. Generals Gibbs and Keane were carried away, severely wounded, the former mortally.

The plain between the front of the British, and the American lines, was strewn with dead; so dreadful a carnage, considering the length of time, and the numbers engaged, was perhaps never witnessed. Two thousand at the lowest estimate, pressed the earth, besides a num-

Battle of New Orleans, January 8, 1815.—Page 372.

Landing of President Jackson at Castle Garden, New-York, June 11, 1833.
Page 540.

ber of the wounded, who were not able to escape. The loss of the Americans did not exceed seven killed and six wounded. General Lambert was the only general officer left upon the field; being unable to check the flight of the British columns, he retired to his encampment.

In the meantime, the detachment under Colonel Thornton succeeded in landing on the right bank, and immediately attacked the intrenchment of General Morgan. The American right, believing itself outflanked, abandoned its position, while the left maintained its ground for some time; but finding itself deserted by those on the right, and being outnumbered by the enemy, they spiked their guns and retired. Colonel Thornton was severely wounded, and the command devolved on Colonel Gobbins, who, seeing the fate of the assault on the left bank, and receiving orders from General Lambert, recrossed the river.

On the return of General Lambert to his camp, it was resolved, in consultation with Admiral Cochrane, to retire to their shipping. This was effected with great secrecy; and during the night of the eighteenth, their camp was entirely evacuated. From the nature of the country, it was found impossible to pursue them; they left eight of their wounded, and fourteen pieces of artillery. Their loss in this fatal expedition was immense; besides their generals, and a number of valuable officers, their force was diminished by at least five thousand men.

It was in vain, as in other instances, to conceal the truth of this affair; and the sensations which it produced in Great Britain, are not easily described; the conduct of the ministry was regarded as shamefully dishonourable, in thus stretching forth one hand to receive the olive, which was tendered by America, and at the same time secretly wielding a dagger with the other.

Commodore Patterson despatched five boats, under Mr. Shields, purser on the New-Orleans station, in order to annoy the retreat of the British. This active and spirited officer succeeded in capturing several of their boats, and in taking a number of prisoners.

The glorious defence of New-Orleans, produced the most lively joy throughout the United States, mingled,

however, with pity for a brave enemy, who had encountered so disastrous a defeat.

The British fleet had, at the same time, ascended the Mississippi, for the purpose of bombarding Fort St. Philip, which was commanded by Major Overton; but without being able to make any impression.

There is but little doubt, that the object of Great Britain was, to possess herself of Louisiana, and obtaining a cession from Spain, draw a cordon round the United States, and by that means strangle this young Hercules, as it were, in the cradle. It is well known, that on board the fleet, they had brought all the officers necessary for the establishment of a civil government, even a collector of the port!

An American must rejoice for his country, when he looks back at the danger it had escaped. That the British intended to deliver the city of New-Orleans to be sacked by their soldiery, is very doubtful; and from the high character of Sir Edward Packenham, it is highly improbable that he would have given, as the watchword of the occasion, *beauty and booty*; this was more probably spoken by some of the inferior officers, with a view of producing an excitement among the soldiery.

We have given the events of this battle in detail, because it may be considered as the most important in its consequences, of any which occurred during the war. As it will always occupy a conspicuous place in the annals of our country, we were unwilling to bring it into a compass so small as necessarily to omit many of its features.

We turn now from this grand spectacle to the ravages of the contemptible Cockburn, who was pursuing a less dangerous, but more profitable occupation, in robbing the defenceless inhabitants of the Carolinas and Georgia. The produce of the plantations, household furniture, and negroes, were the trophies of his prowess. Let a dark mantle shade his memory from the light of military and naval renown.

The momentous intelligence of the defeat of the British at New-Orleans, had scarcely ceased to operate upon the feelings of the people of the United States, when they

received the welcome news of peace. These two events were joyfully celebrated, by illuminations throughout this land of freedom and independence.

CHAPTER XVI.

General View of the United States in 1820.

Having now brought the history of our country down to the close of the war for "free trade and sailors' rights," we may be allowed to take a glance at the progress which we had at that time made in the acquisition of territory by treaty and purchase, and of the prospects thus open before us. We then numbered twenty-four states, one district, and six territories, the boundaries of which follow.

The boundary on the side of the Spanish dominions, according to the treaty with Spain, ratified in 1821, began on the Gulf of Mexico, at the mouth of the River Sabine, and proceeded along the west bank of that river to the 33d degree of N. lat. ; thence by a line due north, to Red River ; thence up that river, to the meridian of 100 degrees W. lon. ; thence due north along that meridian to the River Arkansas ; thence along the south bank of the Arkansas to its source ; thence due north or south, as the case may be, to the parallel of 42 degrees N. lat. and thence along that parallel to the Pacific Ocean. On the side of the British Dominions, the boundary began in the Atlantic Ocean, at the mouth of the River St. Croix, and proceeded up that river to its source ; thence due north to the highlands, which separate the waters falling into the St. Lawrence from those which fall into the Atlantic ; thence along those highlands in a S. W. direction, to the parallel of 45 degrees N. lat. ; thence along that parallel to the River St. Lawrence ; and thence up that river and the great lakes On-

tario. Erie, Huron, and Superior, to the most north-western point of the Lake of the Woods. By the treaty with Great Britain, in 1819, the boundary line proceeds from the last mentioned point, due north or south, as the case may be, to the parallel of 49 degrees N. lat., and thence due west along that parallel to the Rocky Mountains. The boundary between the Rocky Mountains and the Pacific Ocean remained unsettled.

The states are arranged according to their location, thus : *Eastern*—Maine, New Hampshire, Massachusetts, Vermont, Rhode Island, Connecticut, *six*. *Middle*—New York, New Jersey, Pennsylvania, Delaware, Maryland, *five*. *Southern*—Virginia, North Carolina, S. Carolina, Georgia, Alabama, Mississippi, Louisiana, *seven*. *Western*—Tennessee, Kentucky, Ohio, Indiana, Illinois, Missouri, Michigan, Arkansas, *eight*. At that time these were all the states. District of Columbia, the seat of the general government, a tract of ten miles square. *Territories*—Wisconsin, Northwest, Iowa, Missouri, Oregon, Florida, *six*. States, District, and Territories, in all thirty-one. The extent from south to north was 24 degrees, comprehended between 35 and 49 degrees N. lat., and from east to west, 58 degrees 11 minutes W. lon. included between 66 degrees 49 minutes, and 135 degrees. The whole containing two millions of square miles.

By the census of 1820, the whole population was nine millions, six hundred and forty-one thousand, seven hundred and eighty-four. The District of Columbia, being of small extent, and embracing three populous places, Washington, Alexandria, and Georgetown, contains the most dense population, and averages three hundred and thirty on a square mile. Next in population was Massachusetts, which had seventy-two on the square mile. Connecticut fifty-eight, and Rhode Island fifty-three. Delaware thirty-four ; New York thirty ; Maryland twenty-nine ; New Hampshire twenty-six ; Vermont and Pennsylvania twenty-three ; South Carolina twenty ; Virginia seventeen ; Ohio fifteen ; Kentucky and North Carolina thirteen ; Tennessee eleven ; Georgia six ; Lou-

isiana and Alabama three ; Mississippi two ; Illinois and Missouri one ; Michigan contains one inhabitant to about five square miles ; northwest unknown ; Arkansas, Missouri, and Oregon contained a million of square miles, and the first more than fourteen thousand inhabitants. Florida had about one inhabitant to three square miles.

With a knowledge of the qualities of the soil, healthiness of the climate, water privileges and communications, those who wish to emigrate can determine on the most eligible situation with a tolerable degree of accuracy, according to the business which they propose to pursue.

Another consideration with those who wish to change their place of residence, may sometimes be taken into the account, and this is the prevalence of religious opinion. Taking the whole of the Union collectively at that time the principal religious denominations were Presbyterians and Congregationalists, who had, together, more than 2500 congregations ; the Baptists, who had more than 2000 congregations ; the Friends had more than 500 societies ; and the Episcopalians about 300. The Methodists, also, were very numerous. The Baptists and Methodists are found in all parts of the United States ; the Congregationalists are almost wholly in New England ; the Presbyterians are scattered over the middle and southern states ; the Friends are most numerous in Pennsylvania and the adjoining states, and the Episcopalians in New York, Connecticut, Maryland, and Virginia. German Lutherans, German Calvinists, and Moravians, are also numerous in the middle states.

But, besides these, the Unitarians are a fast increasing sect, of which a majority of the Congregational societies in Boston are known to be, and, more or less, the doctrine is spreading through the United States, though the principal part of the societies are supposed to be in New-England. The Universalists are also numerous in Maine, Massachusetts, New-Hampshire, and Vermont ; and in the western counties of New-York they abound. In New York city and Philadelphia, are several churches, and in South Carolina, Ohio, Alabama, and Georgia, they are fast increasing.

Next to religious opinions, the sort of people among whom we purpose to fix a permanent abode, may very properly be considered. Of the United States, the inhabitants consist of whites, negroes, and Indians.

The negroes at that time were generally slaves, and principally confined to the states south of Pennsylvania and the River Ohio. All the whites are of European origin; principally English. The New Englanders, Virginians, and Carolinians are almost purely English. Next to the English are the Germans, who are very numerous in the middle states, particularly in Pennsylvania. Next to the Germans are the Dutch, who are most numerous in New York. The French constitute nearly half the population of Louisiana. The Irish and Scotch are found in the middle states, in the back parts of Virginia, and in all the principal cities of the Union. Very little was known about the Indians west of the Mississippi. The four principal tribes on the east of the Mississippi were the Creeks, Choctaws, Cherokees, and Chickasaws. These tribes lived within the chartered limits of Georgia, Alabama, Mississippi, and Tennessee.

In a country of such great extent, the habits, manners, and general occupations of the people, will, of course, differ materially. The Eastern or New England states, in the interior portions, at that time, devoted their attention principally to agriculture, confined to such articles as are of prime necessity in sustaining life. The cities and towns on the seaboard attended to the fisheries and commerce generally. Lately they have been led to manufactures, particularly of cloths and cotton, for which their various streams are well adapted. The restrictions on commerce, if continued, will probably direct most of the capital hitherto occupied in foreign commerce, into this channel. The immense forests in some of the states, will, however, occupy numbers in the lumber trade, for years to come.

New-England undoubtedly holds the first rank in literature, commerce, enterprise, and wealth, but in grandeur and sublimity, and the natural means of wealth, the western states are more than successful rivals. The plains and mountains, and rivers and forests of the newly settled

parts of the new world, have no parallel in the eastern continent. The following description of the prairies of Louisiana is extracted from Niles' Register, a work not exceeded in this country for the extent and value of its communications.

"The districts of Attakapas and Oppelousas, which stretch along the Mexican gulf, from the Attchaffallaya to the Sabine, are scarcely known to geographers, though they form a most interesting portion of the republic. The fertility of the soil, the value of its products—the immense natural meadows which cover five eighths of the country, and their peculiar fitness for feeding cattle, are all worthy the attention of the shoals of emigrants who are seeking wealth or liberty, to the west and south. The accounts published by Brackenridge and Darby are most to be relied on; but neither of those writers have been sufficiently explicit, though each enjoyed opportunities of acquiring better information. The following statement may, perhaps, be perused with some interest by such as are pleased to note the rapid march which our country is making to power, and give the reader some idea of the vast resources of Louisiana.

About the year 1755, a few French traders commenced a traffic for peltry with the Indians, who inhabited those prairies. They were soon followed by others, who, remarking the great profits to be realized from stock raising, introduced horned cattle into the country. Their success encouraged others to adventure; and we find from the census of 1785, that Attakapas and Oppelousas then contained 2408 inhabitants. In the year 1801, their population was rated at 7250, of which 3500 were slaves. Up to the last named epocha, stock raising formed the almost exclusive occupation of the inhabitants. They supplied New-Orleans and the Mississippi coast with beef, at the rate of one cent and a fourth per pound; but even at this price, many had amassed money enough to purchase slaves and commence farming establishments. The American government, which took place early in 1804, gave new stimulus, and induced the inhabitants to turn their attention more to planting.

The soil and climate uniting with their exertions and

industry, have secured to the first planters of those districts a most enviable independence. A few years ago they were a horde of shepherds, consequently a hardy and virtuous race. Of late their plan of life has changed, and their means rapidly increased, without introducing the thousand fictitious wants, which usually travel in the train of wealth. Even now it is no uncommon sight to see a planter of those countries, owning, perhaps, seventy or eighty slaves, clad in the product of his wife's loom, attending to his horses, oxen, or crop, with more assiduity and attention, than characterizes a Carolina overseer:—yet, if a stranger visits him, he will find his table crowded with the best wines of the world, and no lack of intelligence or any thing else which forms good cheer.

Riches here, appear to add only to the comforts of their possessor, without forming the invidious distinctions among men which exist in other parts of the world. The ease with which they are acquired, may be the reason of this—but the detached situation of the country accounts for it more rationally. Besides the population is as yet quite thinly scattered over an immense territory, and wherever this is the case, we do not usually find so many of those little presuming animals, wearing the shapes of men, which are such great nuisances in thickly inhabited countries.

In 1810, Attakapas and Oppelousas, contained 13,774 souls. For two years after the census was taken, there was a great emigration to the country. It was stopped early in 1813, by the pressure of the war; but since the peace, it has recommenced. At present, (Sept. 1817,) I feel confident the population would be estimated too low at 20,000.

It is the custom for the rich and gay young people of Louisiana and Mississipp., to spend their carnival at New-Orleans. The health enjoyed by the young ladies of the prairies, added to their active and industrious habits, gives them bloom and beauty, which cast the belles of other districts into the shade. It is a singular fact, that for thirteen winters past, the reigning toast in the Orleans ball rooms, has been almost always from Attakapas or Oppelousas

The topography of those countries are pretty accurately delineated in Darby's map of Louisiana. His book is a very inferior production to his map, and not much to be relied on as useful information. I will here add a few words concerning the soil and its productions; but as these vary in an extent of country, containing about 300,000 square miles, I will consider the districts separately.

Oppelousas, lying to the northwest of Attakapas, is well calculated for a grazing country. Its prairies are very extensive, and the greater parts of the land second and third rate. The lands of the best quality in this country, are in its southwest corner, consisting of a strip about twenty-six miles long, and eight wide. In this tract are situated many large plantations, which yield immense profits to their proprietors. The northern part of the country, bordering on Rapide district, is poor land, and the western section, which skirts the gulph and the River Sabine, is little better. These lands, however, produce tolerable corn, and a coarse luxuriant grass, which can feed cattle enough to supply the home and West India markets.

Attakapas is divided into two parishes, St. Mary and St. Martin. The Vermillion River rises in Oppelousas, and on entering St. Martin's, becomes a considerable stream. The lands on its banks are high, and generally of the best quality. After a course of ninety miles in this parish, it falls into the bay of the same name, near the 30th degree of north latitude. Between the Vermillion and the Minton, (the western limit of Attakapas,) lies a prairie country, which in soil is nothing remarkable, but affords excellent pasturage.

The Tesche, likewise, rises in Oppelousas, near the source of the Vermillion. Its general course is to the south east, piercing the western sections of St. Martin and St. Mary. It meets the Attchaffallaya at Berwick's Bay, and is navigable for seventy miles from its mouth for the largest boats, and for smaller craft almost to its source. From the line of Oppelousas to Berwick's Bay, a distance of more than ninety miles, there is no soil on its banks which is not first rate. As it approaches the

sea, however, the land is thought to improve, and the climate certainly becomes more favourable to the culture of sugar. Between the upper part of the Tesche and the Vermillion, in the parish of St. Martin, lies a rich tract of country, principally prairie. It is as yet very partially settled, owing to the scarcity of wood.

This cannot form a permanent impediment, as trees, when planted in those meadows, and shielded from the vernal burnings of the grass, thrives faster than any soil I have ever seen. Several persons have already tried the experiment, and find four or five years sufficient to grow any supply of firewood they may want. Besides, there is not any part of the *rich* meadows of Attakapas more than five miles distant from plenty of wood. The climate is, at the same time, so mild, that fuel is little wanted but for the kitchen.

The good lands of Opelousas and St. Martin's are best adapted to the culture of cotton. They sent to New-Orleans last year 6,000 bales of fine cotton; and if the whole of their rich soil was cultivated, might produce annually more than sixty thousand bales. About five thousand steers are each year exported from those districts, which sell at home for twelve dollars each.

The parish of St. Mary's, being the southern part of the tract of country under consideration, is well adapted for the culture of sugar. This was doubted, until some of the enterprising American emigrants tested it, in the last two years, by the most successful experiments. It is found to succeed as well, if not better, than on the Mississippi, and the cane is certainly brought to maturity with less labour. Cotton also succeeds remarkably well, but will soon give way to sugar. In the year 1816, this parish, with a population of about 3,000 souls, sent to market 2,500 bales of cotton, 900 hogsheads of sugar, and 800 beef cattle, which sold for 350,000 dollars.

Some sugar has been cultivated in Opelousas and St. Martin's, but, owing to mismanagement or the climate, it has not succeeded well.

The parish of St. Mary is in no place more than ten miles wide, having the sea on one side, and Lake Plau and the Attchaffallaya on the other, which may have an

influence on the early frosts, and protect the cane crop till it reaches maturity.

The Tesche lands lie mostly from ten to fifteen feet above the highest swells produced by the Mississippi floods. In the year 1813, and 1815, when there were very great freshets, the lakes between the prairies and the Mississippi, and with them the Tesche, rose about eight feet above their common level. But a recurrence of this can scarcely be expected, as the levees on the Great River are rapidly extending, which will prevent its waters from flowing into the lakes. But even if the levees should be demolished, the prairies are too high ever to be inundated.

The Vermillion is never affected by the Mississippi. The lands on its banks (and, indeed, in every other part of the country except the Tesche) are from 30 to 100 feet above the level of the sea.

Sloops of 100 tons can ascend the Tesche to Nova Iberia, 600 miles from its mouth; though the produce of the country is seldom carried direct to the ocean, the Tesche, and Attchaffallaya communicate with the Mississippi by the Lafouch and Plaquamine; a voyage from any part of those rivers can be easily made to New-Orleans in nine days.

Along the coast of Attakapas are found four islands, viz. Belle Isle, Cole Blanche, Grand Cote, and Petite Ance, which bear no resemblance to the main land, and appear to be remnants of some ancient continent. They rise several hundred feet above the tides, and I would suppose originally belonged to a high diversified country. Be this as it may, they have a very fertile soil, and produce the best sugar and cotton of Louisiana. The four islands contain about 7000 superficial acres of good land. There are sugar establishments on all but Belle Isle. There are other islands lying in the Attchaffallaya, or Berwick's Bay, which have a very good soil, but once in ten or fifteen years have been liable to be overflowed by the heaviest swells of the Mississippi.

In Opelousas about one third of the population is Americans. In St. Martin's one fifth, and in St. Mary's more than a moiety. The rest are principally French.

Lands throughout the whole country are to be had at a very low rate, though they are rising every day in value. Good tracts in the parish of St. Mary's, with plenty of wood, may be had for two and three dollars the acre.

With a salubrious climate, a rich soil, and industrious population, Attakapas, and Oppelousas, will soon not only be called the richest counties of Louisiana, but outstrip in agriculture any section of the union. Such a country is worthy of observation, and with the hope that the remarks I have made may result to the advantage of emigrants, I submit them to my countrymen."

Comparative Estimate of the

POPULATION OF THE UNITED STATES IN 1820.

The northern and eastern sections of the Union are far less favoured by nature for the production of the fruits of the earth, than the southern and western. And hence emigrations are frequent, and the drain of inhabitants great. And yet the fact is evident, that in New-England the population is constantly and rapidly increasing. By comparing the census of 1810 with that of 1820, we perceive a very regular progression, and with very few exceptions, an increase equal to that which might be expected, even without the loss of emigrants. During the ten years mentioned, in Maine, the most barren state in New-England, the net gain of inhabitants was near 70,000, being an addition of nearly one third of its former numbers. The increase was in all the counties.

In the same time New-Hampshire gained about 30,000, being an increase of more than one ninth of her former numbers, and no loss in either of her counties. In Vermont, the increase was about 18,000, and no loss in any section of the state. In Massachusetts, the gain was 51,000, being an increase of about one eighth. Berkshire county lost two hundred and seventeen, and Duke's county gained but two. In Rhode Island, the gain was much less than might be expected, considering the flourishing state of manufactures, and the encouragement held out to enterprise. The whole increase was but about 6,000,

being one twelfth of her former population. In New port county, the loss was about five hundred. In Connecticut, the gain was 14,000, being an increase of about one twentieth of its former numbers. Thus the net increase in the New-England states, during ten years, was 183,000.

We come now to the great state of New-York, which is divided into four large districts, viz. South, Middle, Eastern, and Western. The gain of inhabitants in the South, during ten years, was nearly 39,000, of which New-York city and county received about 27,000. The gain in the Middle district was 37,000. In the Eastern, the increase was 23,000, in which is Washington county, which lost during this time, nearly six thousand. The greatest increment was in the Western district, which nearly doubled in the aggregate, and some of the counties of which, more than tripled their former numbers. St. Lawrence, Courtland, Broome, and Ontario doubled; and Genesee increased more than four fold. The whole gain in the state was 413,763, which is an addition to the census of 1810, of one half, wanting a fraction. The population of the state in 1820 was estimated at sixteen hundred thousand.

New-Jersey exhibits a regular progression, having added to her population but thirty-two thousand, each of the counties having contributed about a fair proportion. The addition is about one seventh in ten years. Pennsylvania exhibits a considerable increase during this period, but the result in the different counties is very unequal. Clearfield, Erie, Jefferson, McKean, Tioga, and Warren, have about doubled, and some of them more than tripled their numbers, while Cumberland, Dauphin, and Northampton, have lost thousands, and Northumberland alone, twenty-one thousand, being three thousand more than half its former inhabitants. The whole increment to the state during ten years, was 239,307, of which Philadelphia city and county, in 1820, claimed nearly 26,000. Delaware ~~na~~ gained but seventy-five during this time, the whole population in 1820, amounting to less than 73,000. In Maryland, the following counties diminished about thirteen thousand in ten years, viz. Charles, Montgomery

Harford, Queen Ann, and Dorchester. The whole gain in the state, however, was near twenty-seven thousand, the whole population being more than four hundred and seven thousand, in 1820.

Having now come in course to the District of Columbia a particular description may be desirable, at least so far as the principal city is worthy of note.

Washington city, the metropolis of the United States, is pleasantly situated on the north-east bank of the River Potomac, at the point of land formed by the junction of the Eastern branch, 300 miles from the mouth of the river, and three miles below the head of the tide. It is separated from Georgetown on the N. W. by Rock Creek, and Tyber Creek passes through the middle of the city. Washington is regularly laid out in streets running due north and south, intersected by others at right angles. Besides these streets, which are from 80 to 110 feet wide, there are avenues, from 130 to 160 feet broad, which diverge from centres in various parts of the city, crossing the other streets transversely. At the points from which the avenues diverge are spacious squares. The ground embraced in the plan of the city is very extensive, but, at that time, only a small portion of it was yet occupied with buildings.

The principal public buildings and establishments are, 1. The *Capitol*, which is finely situated on an eminence, commanding a view of every part of the city, and a considerable portion of the adjacent country. According to the original plan, it is to be composed of a central edifice and two wings. The two wings were in a state of considerable forwardness in 1814, when the British army, under General Ross, gained possession of the city, and destroyed them, together with the President's house and other public structures, and an extensive library, which had been purchased for the use of congress. The wings of the capitol are now rebuilt, and the central building has been commenced. The wings are each 100 feet square, and the whole building, when completed, will be a magnificent edifice, presenting a front of 362 feet. 2. The *President's house*, situated about a mile and a half west of the capitol, on the avenue leading to Georgetown. It is 170 feet by 85, and two stories high. 3. Four spa-

cious buildings, erected in the vicinity of the president's house, for the accommodation of the heads of the great departments of government. 4. An extensive navy-yard, situated on the eastern branch, which forms a safe and commodious harbour. 5. A fort, which, from the extreme southern point of the land on which the city stands, commands the channel of the Potomac; and, 6. the general post-office, a brick edifice, about a mile W. N. W. of the capitol. The style of the architecture of the capitol is Corinthian, and that of the president's house Ionic; and both buildings are constructed of free stone. The capitol square is enclosed by a strong and handsome iron railing: and being planted with trees, and otherwise ornamented, will afford a delightful walk for the inhabitants and visitors of the city. The amount expended by the United States on the public buildings, previously to their destruction by the British, in August, 1814, was \$1,214,291, and there had been appropriated towards rebuilding the same, \$1,297,788, prior to 1820.

Besides the buildings and establishments above enumerated, Washington contained a city hall, a theatre, a college, 4 banks, several manufacturing establishments, and 12 houses for public worship, 3 for Presbyterians, 2 for Episcopalians, 2 for Baptists, 2 for Methodists, 2 for Catholics, and 1 for Friends. There was a bridge about one mile long, over the Potomac, three over the eastern branch, and two over Rock Creek. The population of Washington, in 1808, was 3,210; in 1810, 8,208; and in 1820, 13,247, of whom 3,741 were blacks.

The whole gain in the district, during ten years, was nine thousand.

The southern states, except Alabama, Mississippi, and Louisiana, afford but small inducements for the settlement of emigrants. The two former have considerably increased, and the latter nearly doubled her numbers in ten years. Tennessee has increased in the same ratio, and Kentucky has gained more than fifteen thousand annually, numbering, at the census of 1820, nearly six hundred thousand. But in point of gain in numbers, Ohio takes the lead of all her sister states, having increased, from 1810 to 1820, 350,674; and, at the last named census, was noted down at 518,434.

Having now digressed a little from the track of history, without entirely losing our way, we shall return to the thread of our work, as connected more particularly with the doings of our government.

CHAPTER XVII.

President Monroe's Administration.

Mr. Monroe was sworn into office as President of the United States, on the fourth of March, 1817, and entered on his duties under favourable auspices. On his accession to the presidency, the country was in a prosperous state. War had ceased, and with it much of the asperity of political excitement and party llickering. But to repair the losses of the war, and to regain the commercial prosperity, which had been nearly annihilated, was not the work of a moment. Much of the commerce to which our attention had been turned, had fallen into other hands, and ship building, excepting for the navy, had been nearly forgotten. Our country was inundated by foreign fabrics, and the specie, which had been borrowed at a great premium, was fast leaving the country. But still the inaugural address of the president was encouraging, and he anticipated a return of our former prosperity.

During the summer and autumn of 1817, the president made a tour through the northern and eastern sections of the Union, where his presence was welcomed with the greatest cordiality, and party feeling seemed merged in national patriotism. But, in this journey, the national interests were a principal object. Large sums had been appropriated by the national legislature for the defence of the sea-coast, the safety of our inland frontier, the increase of the navy, and the establishment of national docks, the superintendence of which was committed to the president. That he might discharge his duties with fidelity and judgment, he determined to obtain the necessary information by personal observation.

From Washington, which he left on the first of June

James Monroe.

John Q. Adams.

he went by land to Boston, passing through the principal cities on his route, amidst the congratulations and benedictions of a happy people. From Boston, where he spent several days, he passed through Salem, Newburyport, and Portsmouth, to Portland, whence his course was directed to Plattsburgh, New-York. This important post occupied his attention several days. His course thence was directed to Detroit, through Ogdensburg and Sacketts' Harbour. On the 17th of September he arrived at Washington, having travelled three thousand miles in little more than three months.

On the first of December congress convened, and the message of the president stated, that our national credit was rising, and that the defences of the country were in a state of forwardness; that arrangements were made with Great Britain, to reduce the naval force of the two countries on the lakes; that each country was to retain possession of the islands as before the late war, and that our foreign relations were of a pacific character. He also specially recommended the officers and soldiers of the revolutionary army, to the notice of congress, and pressinglly advocated a repeal of the internal duties, as needless to be continued any longer.

Mississippi was admitted into the union as an independent state on the eleventh, with the usual formalities. In the course of the same month, an expedition, which had been set on foot against Florida, by foreign adventurers, was checked by the troops of the United States. The actors claimed authority under the colonies of South America, and had formed an establishment at Amelia Island, a Spanish province. The American government, therefore, saw proper to take possession of the island, and break up the haunt of a lawless banditti.

Another establishment, similar in its profession and practices, was formed at Galvezton, an island on the Texas coast belonging to the United States. Slaves, in considerable numbers, were thus smuggled into the country, and importations of goods were made through the same channel, in a clandestine manner. A naval force, with troops, was sent against them, and the island surrendered without loss of blood.

During this session several important bills passed the ordeal of congress, particularly that for the relief of revolutionary officers and soldiers. In April, 1818, Illinois adopted a state constitution, and, in December following, was admitted into the Union.

In May, 1818, the president left Washington to view the extensive shores of the Chesapeake Bay, and embarking at Annapolis, examined the coast and waters, with a view of ascertaining the propriety of establishing a naval depot in that vicinity; and having accomplished the object of his visit, returned through Virginia to the seat of government, which he reached on the 17th of June. He every where experienced the same welcome reception which he met in his tour through the northern states during the preceding year.

On the 27th of May, the president and senate ratified the treaty concluded between Mr. Russel and the Swedish government, and the same was ratified by the king of Sweden on the 24th of July following.

The Seminole Indians, urged on, as is supposed, by foreign emissaries who resided among them, commenced hostilities, and several murders were committed; but the Indians refused to give up the guilty, alleging that the whites were the original aggressors. In consequence of this refusal, General Gaines was ordered to remove, discretionally, such Indians as were still on the lands ceded by the Creeks to the United States.

In the execution of this order, one man and woman was killed, and two women made prisoners. Soon after this the Indians fired on a second detachment, who resisted them, and a skirmish ensued, in which several were killed and wounded.

Shortly after this event, Lieutenant Scott, with a detachment of forty men, seven women, and some children, ascending the Appalachicola, with supplies for the garrison at Fort Scott, was attacked, and the whole party killed, excepting six men, who made their escape, and a woman, who was taken prisoner.

From this time the war became serious. The Indians, in considerable numbers, were embodied, and an open attack was made on Fort Scott, to which General Gaines

with about six hundred regular soldiers, was for a time confined. Information of this state of things being communicated to the department of war, General Jackson was ordered, December 26, to take the field, and directed, if he should deem the force with General Gaines, amounting to one thousand eight hundred men, insufficient to cope with the enemy, "to call on the executives of the adjacent states, for such an additional militia force as he might deem requisite." On the receipt of this order, General Jackson prepared to comply; but instead of calling on the executives of the neighbouring states, especially on the governor of Tennessee, who lived near his residence, he addressed a circular to the patriots of West Tennessee, inviting one thousand of them to join his standard.

At the same time he wrote to the governor of Tennessee, M^r Minn, informing him of the appeal he had made to the men whom he had led to victory on the plains of Talledega, Emuckfau, and Tohopeko, and added, "should the appeal prove inefficacious, I will embrace the earliest opportunity of making the requisition on you for a like number of drafted militia." The call of General Jackson was promptly obeyed; and the thousand volunteers, officered by the general, or by the volunteers themselves, were ordered to Fort Scott.

Before taking up his march, he wrote, January 12th, to the secretary of war, apprising him of the appeal he had made to the Tennesseans, assigning as his reason for such a step, that he deemed the force with General Gaines, one thousand eight hundred, insufficient, and "that the greater portion of this number were drafted militia from Georgia, who might apply for their discharge at the expiration of three months from the time they were mustered," about the time he should probably reach Fort Scott. To this communication the secretary replied—"I have the honour to acquaint you of the entire approbation of the president, of all the measures which you have adopted, to terminate the rupture with the Indians."

Believing that the Seminoles could not be subdued, unless they were followed into Florida, General Jackson marched upon St. Marks, a weak garrison, where a por-

tion of them had taken refuge. Possession of the fort was taken easily, and occupied by Jackson as an American post. The main army then marched to Suwaney River, where they consumed an Indian village. At this time the court martial was held, at which Alexander Arbuthnot, and Robert C. Ambrister, were tried and condemned to death. Two Indian Chiefs were hung without trial. The following is extracted from the doings of the court.

“The court, on examination of evidence, and on mature deliberation, find the prisoner, Robert C. Ambrister, guilty of the first and second charges, and do therefore sentence him to suffer *death* by being *shot*. The members, requesting a reconsideration of the vote on this sentence, and it being had, they sentence the prisoner to receive fifty stripes on his bare back, and be confined with a ball and chain, to hard labour, for twelve calendar months. The commanding general approves the finding and sentence of the court, in the case of A. Arbuthnot, and approves the finding and *first* sentence of the court, in the case of Robert C. Ambrister, and disapproves the reconsideration of the sentence of the honourable court in this case.

“It appears from the evidence and pleading of the prisoner, that he did lead and command within the territory of Spain, (being a subject of Great Britain,) the Indians in war against the United States, those nations being at peace. It is an established principle of the laws of nations, that any individual of a nation, making war against the citizens of any other nation, they being at peace, forfeits his allegiance, and becomes an outlaw and pirate. This is the case of Robert C. Ambrister, clearly shown by the evidence adduced.

“The commanding general orders that Brevet Major A. C. D. Fanning, of the corps of artillery, will have, between the hours of eight and nine o'clock, A. M., A. Arbuthnot suspended by the neck with a rope, until he is *dead*, and Robert C. Ambrister to be shot to *death*, agreeably to the sentence of the court.”

General Jackson soon received information, that the governor of Pensacola favoured the Indians; on the know

ledge of which, he took up the line of march for the capital, where he arrived at the end of twenty days. The place was taken with hardly a show of resistance. The governor having escaped to Barancas, a fort six miles distant, it was invested by the American troops, and taken after a resistance of two days, the troops being transported to Havana. A military government was instituted, of which information was given to the secretary of war.—The president, however, soon restored the country to the Spaniards, giving the reasons for its occupation.

The singular steps taken by the commanding general in this affair excited considerable sensations in the minds of Americans, and the subjects of complaint were brought before congress. A military committee censured his conduct, but the house did not concur.

In January, 1819, a convention between the United States and Great Britain, was sanctioned by the president, and ratified by the prince regent in November following. The first article of this instrument, gave liberty to the citizens of the United States, to take fish on the northern, western, and southern banks of Newfoundland. By the second, the northern boundaries of the United States, from the Lake of the Woods to the Stoney Mountains, were established. The fourth extended the term of the convention of 1815, relative to commerce, ten years longer.

In February following, East and West Florida, with the adjacent islands, were ceded to the United States by Spain. This treaty settled the boundaries between the two countries. But the ratification of this treaty was delayed by the king of Spain, under pretence that an expedition against Texas had been fitted out by the United States. The necessary explanations were made by the president, and a bill was introduced into congress, to take possession of Florida, but the step was not taken, and in October, the treaty was ratified by the king of Spain. Formal possession was given to the United States in July following.

In the spring of 1819, Arkansas was constituted a territory by an act of the congress. During the summer, the president visited the southern section of the United States

with a view to the great interests of the nation. He passed through Charleston, Savannah, Augusta, Nashville, the Cherokee nation, Louisville, Lexington, and thence returned to Washington. In December, Alabama was admitted into the union. This territory having long been a bone of contention, we add the following :—

After the peace of 1783, Georgia laid claim to this territory, and exercised jurisdiction over it, until the beginning of the present century. In 1795, an act passed the legislature of Georgia, by which twenty-five millions of acres, of its *western territory*, were sold to companies for five hundred thousand dollars, and the purchase money was paid into the treasury. The purchasers of these lands soon after sold them at advanced prices. The sale of the territory excited a warm opposition in Georgia, and at a subsequent meeting of the legislature, the transaction was impeached on the ground of bribery, corruption, and unconstitutionality.

The records respecting the sale were ordered to be *burnt*, and the five hundred thousand dollars to be refunded to the purchasers. Those who had acquired titles of the original purchasers, instituted suits in the federal courts. In 1802, however, Georgia ceded to the United States all her western territory, for one million two hundred and fifty thousand dollars. On this event the purchasers of the Yazoo land petitioned congress for redress and compensation. After considerable opposition, an act passed for reimbursing them with funded stock, called the Mississippi stock.

In the following year, Maine, which had formerly belonged to Massachusetts, was erected into an independent state, and joined the federal union. The separation from the parent state was on the most amicable terms.

Mr. Monroe having been re-elected president, took the usual oath of office on the 5th of March, 1821, and Mr. Tompkins was again elected vice-president. On the 10th of August, the proclamation of the president announced, that Missouri was admitted into the federal compact as an integral part.

Upon the cession of Louisiana to the United States,

the district, which now forms the state of Louisiana, was separated from the territory, and made a distinct government, by the name of the territory of Orleans. In 1811 the territory of Orleans became a state, by the name of Louisiana. The remaining part of the original province of Louisiana, extending to the Pacific, was erected into a territorial government, and called *Missouri*. In 1818—19, application was made to congress, by the people of this territory, to form a state constitution. A bill was accordingly introduced for the purpose, a provision of which forbade slavery, or involuntary servitude. The bill, with this provision, passed the house of representatives, but was rejected in the senate, and, in consequence of this disagreement, the measure, for the time, failed.

In the session of 1819—20, the bill was revived, and, after long and animated debates, a compromise was effected, by which slavery was to be tolerated in Missouri, and forbidden in all that part of Louisiana, as ceded by France, lying north of 36° 30' north latitude, except so much as was included within the limits of the state. In the mean time, the people of Missouri had formed a state constitution. When this constitution was presented to congress in 1820—21, a provision in it, which required the legislature to pass laws "to prevent free negroes and mulattoes from coming to, and settling in, the state," was strenuously opposed, on the ground that it violated the rights of such persons of that description as were citizens of any of the United States.

The contest occupied a great part of the session, and it was finally determined, by a small majority, that Missouri should be admitted, upon the fundamental condition, that the contested clause should not be construed to authorize the passage of any laws excluding citizens of other states from enjoying the privileges to which they are entitled by the constitution of the United States. It was also provided, that if the legislature of Missouri should, by a solemn public act, previously to the fourth Monday of November, 1821, declare the assent of the state to this fundamental condition, the president should issue his proclamation, declaring the admission complete. On the

24th of June, 1821, the legislature of Missouri assented to the fundamental condition; and, on the 10th of August following, the president's proclamation was issued declaring the admission complete.

During the first session of the seventeenth congress, a territorial government was established for Florida. At the opening of the second session, the president informed congress, that, in June, a convention of navigation and commerce, resting essentially on a basis of reciprocal and equal advantage to the two countries, had been concluded between France and the United States; that the prohibition which had been imposed on commerce between the United States and the British colonies, in the West Indies, and on this continent, had been removed, and that the ports of those colonies had been opened to the vessels of the United States, by an act of the British parliament.

In a second message, a few days subsequently, the president introduced to the notice of congress, the interesting subject of the "multiplied outrages and depredations recently committed on our seamen and commerce, by pirates in the West Indies, and Gulf of Mexico," and recommended the immediate organization of an efficient force to suppress them. A bill was accordingly introduced, authorizing the president to provide such a force, and to despatch it immediately to the protection of our persecuted seamen.

Immediately after the passage of the above bill, Commodore Porter was appointed to this service, and, soon after, hoisting his broad pennant on board the *Peacock*, stretched his way, with a respectable force, to chastise those miscreants, that regard no law, and that feel no mercy.

This session closed on the 3d of March, 1823, in which little business of general importance had been transacted.

At the opening of the first session of the eighteenth congress, in December, the president spoke in high terms of the prosperous state of the finances, and of our amicable relations with foreign nations. In relation to the efforts of the executive to stop the depredations of the

pirates on the national commerce, the president stated, that in the West Indies, and the Gulf of Mexico, the naval force had been augmented, according to the provisions of congress. "This armament," said he, "has been eminently successful in the accomplishment of its object. The piracies by which our commerce, in the neighbourhood of the Island of Cuba, has been afflicted, have been repressed, and the confidence of the merchants, in a great measure, restored."

In allusion to the Greek revolution, the president has the following judicious remarks; and though his half-prophetic wishes are not yet realized, the prospect that they will soon be is certainly a bright one. "A strong hope has been long entertained, founded on the heroic struggle of the Greeks, that they would succeed in their contest, and resume their equal station among the nations of the earth. It is believed that the whole civilized world takes a deep interest in their welfare.

"Although no power has declared in their favour, yet none, according to our information, has taken part against them. Their cause, and their name, have protected them from dangers which might, ere this, have overwhelmed any other people. The ordinary calculations of interest, and of acquisition, with a view to aggrandizement, which mingle so much in the transactions of nations, seem to have had no effect in regard to them. From the facts which have come to our knowledge, there is good cause to believe that their enemy has lost, for ever, all dominion over them—that Greece will again become an independent nation. That she may obtain that rank, is the object of our most ardent wishes."

Speaking of Spain and Portugal, in relation to the attempts of the "Holy Alliance" to extend their political system to South America, the executive observed, "but, on this topic, the citizens of the United States cherish sentiments the most friendly in favour of the liberty and happiness of their fellow men on that side of the Atlantic. In the wars of the European powers, in matters relating to themselves, we have never taken any part, nor does it comport with our policy so to do.

"It is only when our rights are invaded, or seriously

menaced, that we resent injuries, or make preparation for our defence. With the movements in this hemisphere, we are, of necessity, more immediately connected, and by causes which must be obvious to all enlightened and impartial observers. The political system of the allied powers is essentially different, in this respect, from that of America. This difference proceeds from that which exists in their respective governments. And to the defence of our own, which has been achieved by the loss of so much blood and treasure, and matured by the wisdom of our most enlightened citizens, and under which we have enjoyed unexampled felicity, this whole nation is devoted. We owe it, therefore, to candour, and to the amicable relations existing between the United States and those powers, to declare, that we should consider any attempt, on their part, to extend their system to any portion of this hemisphere, as dangerous to our peace and safety.

“ With existing colonies, or dependencies of any European power, we have not interfered, and shall not interfere. But with the governments who have declared their independence, and maintained it, and whose independence we have, on great consideration, and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling, in any other manner, their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition towards the United States. In the war between those new governments and Spain, we declared our neutrality at the time of their recognition, and to this we have adhered, and shall continue to adhere, provided no change shall occur, which, in the judgment of the competent authority of this government, shall make a corresponding change on the part of the United States indispensable to their security.”

To this language, so temperate, just, and independent, every good citizen responded amen. His remarks on the state of the country, in the same message, are too valuable to be omitted.

“ If we compare the present condition of our Union, with its actual state at the close of our revolution, the

history of the world furnishes no example of a progress in improvement in all the important circumstances which constitute the happiness of a nation, which bears any resemblance to it. At the first epoch, our population did not exceed three millions. By the last census it amounted to about ten millions; and what is more extraordinary, it is almost altogether native, for the emigration from other countries has been inconsiderable. At the first epoch, half the territory within our acknowledged limits, was uninhabited and a wilderness. Since then, new territory has been acquired, of vast extent, comprising within it many rivers, particularly the Mississippi, the navigation of which, to the ocean, was of the highest importance to the original states.

“Over this territory our population has expanded in every direction, and new states have been established, almost equal in number to those which formed the first bond of our union. This expansion of our population, and accession of new states to our union, have had the happiest effect on all its higher interests. That it has eminently augmented our resources, and added to our strength and respectability as a power, is admitted by all. But it is not in these important circumstances only that this happy effect is felt. It is manifest that, by enlarging the basis of our system, and increasing the number of states, the system itself has been greatly strengthened in both its branches. Consolidation and disunion have thereby been rendered equally impracticable. Each government, confiding in its own strength, has less to apprehend from the other; and, in consequence, each enjoying a greater freedom of action, is rendered more efficient for all the purposes for which it was instituted.”

The sympathy expressed by the president for the sufferings of the Græeks, called forth a resolution from Mr. Webster, providing for the expenses of an agent to Greece, whenever the executive should deem the appointment proper and expedient. In offering the resolution, Mr. Webster stated, it was far from being his wish, in any manner, to commit the house, in this or any of the political contests of Europe; but the President of the United States having, in his message to congress, not

only expressed a belief that the Greek nation, in its present struggle with its opposers, had the good wishes of the whole civilized world, but also advanced the opinion that the Turkish dominion over that country was lost forever; he thought that if such were the fact, it was important that congress should act upon the subject.

The main object in view was to obtain from the house an expression, responsive to the sentiment of the message, in reference to the sacrifices and sufferings of that heroic people—sacrifices and sufferings, which ought to excite the sympathy of every liberal minded man in Europe, as well as in this country. But whatever might be the case with other nations, *we* certainly ought not to be restrained from expressing, with freedom, what are our views in relation to the Greek cause, so far as may be done without committing ourselves in the contest. And he really did hope that we should show to the world, that there is, at least, one government which does entertain a proper view of that barbarous despotism, which, under the eyes of Europe, has been permitted, by a system of the foulest atrocity, to attempt to crush an interesting Christian nation.

In most of our large towns and literary institutions, meetings were held in reference to this subject, and resolutions adopted, expressive of sentiments alike honourable to our citizens as members of a free community, and as friends of humanity. They spoke a language worthy of the cause which called them forth, and such as the circumstances of the age require. They are a proof, too, of the existence and the energy of that principle in the American people, which removes them farther from the supporters of legitimacy than the breadth of the Atlantic, and is a safer bulwark than its billows.

From that time to the present, large contributions have been made in the United States, and forwarded to the proper authorities of that oppressed and ill-fated country. At present, the armies of Russia threaten the capital of Turkey, and little doubt remains of the emancipation of the Greeks.

The session of congress closed in May, in 1824; the most important bills which passed, being one to abolish

Landing of General Lafayette at Castle Garden, in New York, August 16th, 1824.—Page 401.

Colonel Daniel Boone, the first settler of Kentucky, exploring the country, in 1769.—Page 459.

imprisonment for debt, and the other establishing a tariff of duties on imports. The latter of these occupied the time of Congress during ten weeks, and at last passed by a majority of five only, two members being absent.

On the 16th of August, the Marquis La Fayette, accompanied by his son, and M. La Vasseur, his secretary, landed in New-York, where he was welcomed in a manner which evinced a sense of national gratitude, never surpassed.

From New-York, La Fayette passed through the country to Boston, constantly receiving the most enthusiastic congratulations of the people. Not only at every place where he stopped, but as he passed along the road, thousands came to catch a glimpse of him, and bid "Welcome La Fayette." Having visited most of the principal towns in Massachusetts, New-Hampshire, Rhode Island, and Connecticut, he again returned to New-York. During this tour, it is impossible to convey, in general terms, an adequate idea of the excitement into which the country was thrown. Committees were constantly arriving from distant towns at the places where he stopped, to solicit the honour of receiving him, and to know on what day, and at what hour, his arrival might be expected. In some instances, gentlemen residing at a distance from his route, directed the news of his approach to be sent them by expresses. Meantime the general was so obliging as to allow himself to be transported with the utmost rapidity from place to place, often travelling most of the night, so as not to disappoint the anxious expectations of the people. From New-York the general went to Philadelphia, Baltimore, Washington, &c. constantly receiving from the people the same cordial welcome, and witnessing the same demonstrations of joy wherever he went.

But the feelings of the nation demanded that something more should be done for General La Fayette, than could be expressed by acclamation alone. His love of liberty had been the means of depriving him of a great proportion of his fortune. When, during our revolution, the country was so exhausted as to be unable to clothe or feed her little army, La Fayette not only gave all his pay

to government, but advanced money which never was refunded : so that, in addition to the debt of gratitude, the nation owed him for advancements made during her necessities. It was the exercise of the same leading principle, (the love of liberty,) which occasioned the confiscation of his estates in France, when the Jacobin faction controlled the kingdom.

Under every consideration, the nation was bound to show La Fayette and the world, that in the prosperity of his adopted country, his former services were remembered with too much gratitude to be passed over without some permanent mark of national beneficence.

The president of the United States, therefore, in his message to congress, at the opening of the last session, recommended, in appropriate terms, the consideration of General La Fayette's eminent services to the country, and requested that the legislative body of the nation would devise some means of making him at least a partial remuneration. Agreeably to this recommendation, congress appointed a committee to deliberate on the subject, and on the 20th of December, "Mr. Hayne, from the committee appointed on so much of the president's message as relates to making provision for the services of General La Fayette, reported the following bill :—

"Be it enacted, by the Senate and House of Representatives of the United States, in Congress assembled, That the sum of two hundred thousand dollars be, and the same is hereby granted to Major General La Fayette, in compensation for his important services and expenditures during the American Revolution; and that for this purpose a stock to that amount be issued in his favour, dated the 4th of July, 1824, bearing an annual interest of six per cent. payable quarter yearly, and redeemable on the 31st of December, 1834.

"Sec 2. And be it further enacted, That one complete township of land be, and the same is, hereby granted to the said Major General La Fayette; and that the president of the United States be authorized to cause the said township to be located on any of the public lands which remain unsold; and that patents be issued to General La Fayette for the same."

On the 21st this bill was made the order of the day in the Senate, and the following debate on it, extracted from the journals of congress, will tend to show with how much reason the bill was passed :

Senate, Tuesday, December 21.

“ The Senate proceeded, as in committee of the whole, to the consideration of the bill making provision for the services and expenditures of General La Fayette.

“ Mr. Hayne, (of S. C.) in reply to Messrs. Macon and Brown, who objected to the bill, remarked, that the observations made by the honourable gentlemen rendered it his duty, though it was done with regret, as he had hoped the bill would pass without opposition, as chairman of the committee, to submit the principle on which the committee had proceeded in presenting the present bill. He trusted that he should be able to satisfy the scruples of the honourable gentlemen, and that there would be no necessity for recommitting the bill.

“ With regard to the objections made by his friend on his right, (Mr. Macon,) they affected the making any compensation, under any circumstances whatever, to individuals, either for services rendered, or sacrifices made. He understood, he had said it was immaterial whether an individual should have spent his substance in the service of his country—should have put his hand in his purse, and paid the expenses of the war, still that for such services no compensation could be made.

“ He could show that this was the fact—that it was precisely the case with regard to General La Fayette. He had expended his fortune in our service, and he should contend it was right, it was necessary—they were called on by duty to themselves, at least to refund the expenses to which he had been subjected. Mr. Hayne proceeded to say, that he held documents in his hand which it became his duty to submit to the senate—documents derived from the highest authority. The paper held in his hand contained accounts from the proper officers, showing the expenses of La Fayette, and pointing out the manner in which his estate had been dissipated in the service of liberty. In the year 1777, he had an annual in

come of 146,000 francs, equal to 28,700 dollars. This had been almost entirely expended in the services which he had rendered to liberty, in this and the other hemisphere. During a period of six years, from the year 1777 to 1783, he had expended, in the American service, 700,000 francs, equal to 140,000 dollars. This document, said Mr. Hayne, is derived from the most authentic sources in France, and is come into my hands from a respectable member of this house, without the knowledge or consent of the general and his friends.

“ The fact to which he called their attention was, that during the six years the general had been engaged in the service, he had expended 140,000 dollars of his fortune; he was in a state of prosperity, and in the enjoyment of a plentiful fortune in his own country, when he resolved to come to this. He purchased a ship, raised, equipped, armed, and clothed a regiment at his own expense, and when he landed on these coasts, he came freighted with the munitions of war, which he distributed gratuitously to our army.

“ It is on record that he clothed and put shoes on the feet of the naked, suffering soldiers of America, and that during six years he sacrificed 140,000 dollars. He asked for no compensation—he made out no account—he received no pay—he spent his fortune for this country, and not only gave his services, but hazarded his life in its defence, shed his blood in its service, and returned home broken in his fortune. What did government do? After the war, in 1794, they gave him the full pay of a major general, to which he was entitled twelve or fourteen years before. If any American citizen had done as much, and had brought in an account stating he had expended 140,000 dollars, and made application for compensation, would it not have been granted? Indeed, if we were to make out an account current of the expenses and sacrifices of the general, it would far exceed the sum now proposed. But he never rendered a claim; he would have starved ere he would have done it.

“ I have other documents, said Mr. Hayne, to which I shall briefly refer. There is one fact which shows how alive he was to every honourable sentiment. He has

made sacrifices that can never be repaid. Congress, in their gratitude, made him a donation of 11,000 acres of land, which, at the value of lands at that time, was not worth more than 11,000 dollars; and, by act, in 1804, they authorized him to locate this land on any spot in the United States that might be vacant; and his agent accordingly located it in the neighbourhood of New-Orleans. In 1807, congress passed an act confirming the title to the city council of New-Orleans, of all lands within six hundred yards of its limits.

“Part of the land belonging to General La Fayette was included in this grant, and on the fact being communicated to him in France by his agent, accompanied by legal advice of the validity of his title, he replied, that it was not for him to inquire into the circumstances, but that he, receiving bounty from the government of the United States, could only receive it as they chose to give it, and directed his agent to enter a relinquishment of the land in question. This land, according to the estimate of gentlemen from Louisiana, is now worth 500,000 dollars. But there is another circumstance to be stated: having located the land, he made a contract with an Irish baronet for the sale of a portion of it, and he afterwards made it his business to find him out—he relinquished his own right, and, at his own expense, induced him to relinquish every legal claim that he could have upon the United States. This relinquishment was on file in the land office, and Mr. Hayne submitted the documents to the examination of the senate.

“These claims appear certainly in a very strong, and, he might say, irresistible shape before the senate. His honourable friend on the right had said, that we treat this gentlemen better than we do our native sons, but it appeared that they barely did him justice. Did the gentleman doubt that this government were in the habit of making remuneration for sacrifices and services—he would refer him to an act passed in 1790, granting compensation to Frederick William Baron Steuben, for sacrifices and services.

“Mr. Hayne proceeded to refer to many instances where the government had not only granted pecuniary assist-

ance, but had granted a whole township of land for sacrifices and services. He was not one of those who were afraid of making precedents—a good precedent can never do evil; and when nations, as well as individuals, gave way to the noblest feelings of our nature, they best promoted the glory of the country, and the welfare of the people; but the cause of La Fayette could form no precedent—it stood alone.

“Could this country be born again? Could it assume a second childhood, and be placed in circumstances similar to those it had formerly been? If this were possible, if it could be reduced again to equal distress, be struggling for existence, about to perish, without funds, arms, clothing, or ammunition, and looking around for help—if, under such circumstances, a foreign nobleman should step forth, and devote his life and fortune to her service, sacrificing every thing, and shedding his blood in her behalf, and while the scale was depressed, throwing himself into the balance, and deciding its fate—surely, such a man would be entitled to the warmest gratitude of the country.”

After some further debate, the bill was passed, and a committee appointed to wait on La Fayette with a copy of the act. To an address of the committee on the occasion of presenting the act, the marquis returned the following answer :

Gentlemen of the Committee of both Houses of Congress :

The immense and unexpected gift, which, in addition to former and considerable bounties, it has pleased congress to confer upon me, calls for the warmest acknowledgments of an old American soldier, an adopted son of the United States, two titles dearer to my heart than all the treasures in the world.

However proud I am of every sort of obligation received from the people of the United States, and their representatives in congress, the large extent of this benefaction might have created in my mind feelings of hesitation, not inconsistent, I hope, with those of the most grateful reverence. But the so very kind resolutions of both houses, delivered by you, gentlemen, in terms of equal

kindness, precludes all other sentiments, except those of lively and profound gratitude, of which, in respectfully accepting the munificent favour, I have the honour to beg you will be the organs.

Permit me also, gentlemen, to join a tender of my affectionate personal thanks to the expression of the highest respect, with which I have the honour to be your obedient servant,

LA FAYETTE.

At Washington. La Fayette was received by both houses of Congress with suitable honours. Thence passing to the south, he visited most of the cities in that section of the country.

After visiting various places, in the autumn of 1825, the marquis took passage in the frigate *Brandywine*, for France, where he arrived in safety, and where he still lives, in the enjoyment of a contented mind, and a clear conscience; the friend of man and the hero of freedom.

The second session of the eighteenth congress, commenced in December, on which occasion we find in the presidential message: "Our relations with foreign powers are of a friendly character, although certain interesting differences remain unsettled. Our revenue under the mild system of impost and tonnage, continues to be adequate to all the purposes of government. Our agriculture, commerce, manufactures, and navigation, flourish. Our fortifications are advancing, in the degree authorized by existing appropriations, to maturity, and due progress is made in the augmentation of the navy to the limit prescribed by law."

He also stated, that the convention of navigation and commerce concluded between the United States and France in 1822, still continued;—that our commercial intercourse with the British dominions in Europe and the East Indies, resting on the basis of reciprocity, which had been arranged by a convention, in 1815, was confirmed and continued for ten years, by treaty, in 1818; but that the trade with the British colonies in the West Indies, had not as yet been settled to the satisfaction of the executive; that our commerce with Sweden had been placed on a footing of perfect reciprocity, by treaty; and with Rus

sia, the Netherlands, Prussia, and the free Hanseatic cities, the dukedom of Oldenburg and Sardinia, by internal regulations on each side, founded on mutual agreement between the respective governments; and that the great and extraordinary changes which had happened in Spain and Portugal, within the last two years, had not seriously affected the friendly relations subsisting between them and the United States; although they had presented obstacles to the adjustment of the particular subjects of discussion which have arisen with each. With the remaining powers of Europe, with those on the coast of Barbary, and with all the new South American states, our relations were moreover stated to be of a friendly character. The country has ministers plenipotentiary residing with the republics of Colombia and Chili, and have received ministers of the same rank, from Colombia, Guatemala, Buenos Ayres, and Mexico, and a charge d'affaires from the independent government of Brazil.

From the view which he then took of our situation, it was manifest that we were in a highly prosperous situation, and that our duty and happiness would consist in handing these blessings down to posterity unimpaired.

This session closed constitutionally on the third of March, 1825. The most interesting subjects which occupied its attention during the session, were the occupation of the Oregon on the North-west coast, and the suppression of piracy. The bill respecting the former, however, was lost in the senate; being indefinitely laid on the table; while that respecting piracy passed; which, however, does little more than to authorize the building of ten additional ships of war. The bill authorizing the occupation of the Oregon, was passed by the house of representatives, but had previously been so amended as to provide only for a military occupation of the mouth of the river. This amendment was adopted for the purpose of avoiding a violation of the treaty with Great Britain, which provides that the boundary line on that frontier shall remain unsettled ten years.

The presidency of Mr. Monroe closed with the session, during which the country enjoyed a state of peace and uniform prosperity. He retired from office, enjoying

the respect, affection, and gratitude, of all who are able duly to appreciate the blessings of having a wise ruler.

The choice of president, for the succeeding term of four years, not being settled by the electoral vote, devolved on the House of Representatives. John Quincy Adams was chosen, and took the oath of office on the 4th of March, and John C. Calhoun was chosen vice president by the electors.

The address of Mr. Adams, on his induction into office, was such as might rationally be expected. Speaking of our political creed, he says, it "is, without a dissenting voice that can be heard, that the will of the people is the source, and the happiness of the people the end, of all legitimate government upon earth—That the best security for the beneficence, and the best guarantee against the abuse of power, consists in the freedom, the purity, and the frequency of popular elections.

"That the general government of the Union, and the separate governments of these states, are all sovereignties of limited powers; fellow servants of the same masters, uncontrolled within their respective spheres, uncontrollable by encroachments upon each other. That the firmest security of peace is the preparation, during peace, of the defences of war. That a rigorous economy, and accountability of public expenditure, should guard against the aggravation, and alleviate, when possible, the burden of taxation. That the military should be kept in strict subordination to the civil power. That the freedom of the press and of religious opinion should be inviolate. That the policy of our country is peace, and the ark of our salvation, union, are articles of faith upon which we are all agreed."

The following paragraphs we copy entire, as too valuable to be omitted, even in a condensed history.

"In the compass of thirty years, since this great national covenant was instituted, a body of laws enacted under its authority, and in conformity with its provisions, has unfolded its powers, and carried into practical operation its effective energies. Subordinate departments have distributed the executive functions in their various relations, to foreign affairs, to the revenue and expenditures

and to the military force of the Union, by land and sea. A co-ordinate department of the judiciary has expounded the constitution and the laws; settling, in harmonious coincidence with the legislative will, numerous weighty questions of construction which the imperfection of human language had rendered unavoidable.

“The year of jubilee, since the first formation of our union, has just elapsed; that of the declaration of our independence is at hand. The consummation of both was effected by this constitution. Since that period, a population of four millions has multiplied to twelve. A territory, bounded by the Mississippi, has been extended from sea to sea. New states have been admitted to the Union, in number nearly equal to those of the first confederation. Treaties of peace, amity, and commerce, have been concluded with the principal dominions of the earth. The people of other nations, inhabitants of regions acquired not by conquest, but by compact, have been united with us in the participation of our rights and duties, of our burdens and blessings.

“The forest has fallen by the axe of our woodsmen—the soil has been made to teem by the tillage of our farmers; our commerce has whitened every ocean. The dominion of man over physical nature has been extended by the invention of our artists. Liberty and law have marched hand in hand. All the purposes of human association have been accomplished as effectively as under any other government on the globe, and at a cost little exceeding, in a whole generation, the expenditures of other nations in a single year.

“Such is the unexaggerated picture of our condition, under a constitution founded upon the republican principle of equal rights. To admit that this picture has its shades, is but to say that it is still the condition of men upon earth. From evil, physical, moral, and political, it is not our claim to be exempt. We have suffered, sometimes by the visitation of Heaven, through disease; often by the wrongs and injustice of other nations, even to the extremities of war; and, lastly, by dissensions among ourselves—dissensions, perhaps inseparable from the enjoyment of freedom, but which have more than once ap

peared to threaten the dissolution of the union, and, with it, the overthrow of all the enjoyments of our present lot, and all our earthly hopes of the future. The causes of these dissensions have been various, founded upon differences of speculation in the theory of republican government; upon conflicting views of policy, in our relations with foreign nations; upon jealousies of partial and sectional interests, aggravated by prejudices and prepossessions, which strangers to each other are ever apt to entertain."

On the 31st of May, a treaty of peace, amity, navigation, and commerce, between the United States and Colombia, was ratified by the president. The first article establishes a firm and inviolable peace, and perpetual friendship. By the second, no partiality was to be shown to any other nation to which each of the contracting parties had not an equal right. By the sixth article, merchant vessels, and ships of war, were to be protected in the bays and harbours of both parties, either in stress of weather, or to shield them from the pursuit of pirates, or other enemies. The seventh grants a return of ships and merchandise which may be taken in their respective jurisdictions. By the tenth, both the contracting parties engage, formally, to give their special protection to the persons and property of the other, and to leave open and free to them the tribunals of justice for their judicial recourse, on the same terms as are usual with native citizens of either party. By the eleventh, liberty of conscience is mutually guaranteed. By the fourteenth, liberty of commerce and navigation, except contraband of war, in times which would endanger the safety of either contracting party, is freely granted. The treaty was to remain in force twelve years after the exchange of ratifications.

The 7th of September was the day appointed for the departure of the nation's guest, General La Fayette, from Washington. On Mr. Adams devolved the task of bidding him farewell, in the name of the nation to whom he had been a constant friend, and a noble benefactor. How well, and with what dignity and feeling, he executed this task, we need not attempt to describe, and we regret that

our plan does not permit us to copy the whole address. We can copy but a brief sketch, which will be found in the following selected paragraphs.

“ When the contest of freedom to which you had repaired as a voluntary champion, had closed, by the complete triumph of her cause in this country of your adoption, you returned to fulfil the duties of the philanthropist and patriot in the land of your nativity. There, in a consistent and undeviating career of forty years, you have maintained, through every vicissitude of alternate success and disappointment, the same glorious cause to which the first years of your active life had been devoted—the improvement of the moral and political condition of man.

“ Through that long succession of time, the people of the United States, for whom, and with whom, you had fought the battles of liberty, have been living in full possession of its fruits; one of the happiest among the family of nations. Spreading in population, enlarging in territory, acting and suffering according to the condition of their nature, and laying the foundations of the greatest, and, we humbly hope, the most beneficent power that ever regulated the concerns of man upon earth.

“ In that lapse of forty years, the generation of men with whom you co-operated in the conflict of arms, has nearly passed away. Of the general officers of the American army in that war, you alone survive. Of the sages who guided our councils; of the warriors who met the foe in the field, or upon the waves, with the exception of a few, to whom unusual length of days has been allotted by heaven, all now sleep with their fathers. A succeeding, and even a third generation, have arisen to take their places; and their children’s children, while rising up to call them blessed, have been taught by them, as well as admonished by their own constant enjoyment of freedom, to include, in every benison upon their fathers, the name of him who came from afar, with them, and in their cause, to conquer or to fall.

“ You are now about to return to the country of your birth, of your ancestors, of your posterity. The executive government of the union, stimulated by the same

feeling which had prompted the congress to the designation of a national ship for your accommodation in coming hither, has destined the first service of a frigate, recently launched at this metropolis, to the less welcome, but equally distinguished trust of conveying you home. The name of the ship has added one more memorial to distant regions and to future ages, of a stream already memorable, at once in the story of your sufferings and of our independence.

“The ship is now prepared for your reception, and equipped for sea. From the moment of her departure, the prayers of millions will ascend to heaven that her passage may be prosperous; and your return to the bosom of your family as propitious to your happiness, as your visit to this scene of your youthful glory has been to that of the American people.

“Go, then, our beloved friend—return to the land of brilliant genius, of generous sentiment, of heroic valour; to that beautiful France, the nursing mother of the twelfth Louis, and the fourth Henry; to the native soil of Bayard and Coligni, of Turenne and Catinat, of Fenelon and D’Aguesseau. In that illustrious catalogue of names which she claims as of her children, and with honest pride holds up to the admiration of other nations, the name of La Fayette has already for centuries been enrolled. And it shall henceforth burnish into brighter fame; for if, in after days, a Frenchman shall be called to indicate the character of his nation by that of one individual, during the age in which we live, the blood of lofty patriotism shall mantle in his cheek, the fire of conscious virtue shall sparkle in his eye, and he shall pronounce the name of La Fayette. Yet we, too, and our children, in life and after death, shall claim you for our own. You are ours by that more than patriotic self-devotion with which you flew to the aid of our fathers at the crisis of their fate. Ours by that long series of years in which you have cherished us in your regard. Ours by that unshaken sentiment of gratitude for your services which is a precious portion of our inheritance. Ours by that tie of love stronger than death, which has linked your name, for the endless ages of time, with the name of Washington.”

To this the veteran general replied; and, after mentioning his obligations to the American government and people for their munificence and kind reception, he added, "Yet, gratification still higher awaited me; in the wonders of creation and improvement that have met my enchanted eye, in the unparalleled and self-felt happiness of the people, in their rapid prosperity and insured security, public and private, in a practice of good order, the appendage of true freedom, and a national good sense, the final arbiter of all difficulties, I have had proudly to recognize a result of the republican principles for which we have fought, and a glorious demonstration to the most timid and prejudiced minds, of the superiority, over degrading aristocracy or despotism, of popular institutions founded on the plain rights of man, and where the local rights of every section are preserved under a constitutional bond of union. The cherishing of that union between the states, as it has been the farewell entreaty of our great paternal Washington, and will ever have the dying prayer of every American patriot, so it has become the sacred pledge of the emancipation of the world, an object in which I am happy to observe that the American people, while they give the animating example of successful free institutions, in return for an evil entailed upon them by Europe, and of which a liberal and enlightened sense is every where more and more generally felt, show themselves every day more anxiously interested.

"God bless you, sir, and all who surround us. God bless the American people, each of their states, and the federal government. Accept this patriotic farewell of an overflowing heart; such will be its last throb when it ceases to beat."

As the last sentence was pronounced, the general advancing, while the tears poured over his venerable cheeks, again took the president in his arms; he retired a few paces, but, overcome by his feelings, again returned, and uttering, in broken accents, "God bless you!" fell once more on the neck of Mr. Adams. It was a scene at once solemn and moving, as the sighs and stealing tears of many, who witnessed it, bore testimony. Having recovered his self-possession, the general stretched out his

hands, and was, in a moment, surrounded by the greeting of the whole assembly, who pressed upon him, each eager to seize, perhaps for the last time, that beloved hand which was opened so freely for our aid, when aid was so precious, and which grasped, with firm and undeviating hold, the steel which so bravely helped to achieve our deliverance.

The general was attended to the Potomac, by a large military escort, and thousands of citizens. The *Mount Vernon* steam boat waited to convey him on board the Brandywine. When the mansion, the groves, and the tomb of Mount Vernon, opened to view, the progress of the little fleet was arrested—it remained motionless on the broad bosom of Potomac's wave—that the last of the generals might pay his pious homage and filial duty to the tomb of the paternal chief.

La Fayette arose—the wonders which he had performed for a man of his age, in successfully accomplishing labours enough to have tested his meridian vigour, whose animation rather resembles the spring than the winter of life, now seemed unequal to the task he was about to perform: To take a last look at the grave of Washington! He advanced to the effort—a silence the most impressive reigned around, till the strains of sweet and plaintive music completed the grandeur and sacred solemnity of the scene. All hearts beat in unison with the throbbings of the veteran's bosom as he looked, and that for the last time, on the sepulchre which contains the ashes of the first of men. He spoke not, but appeared absorbed in the mighty recollections which the place and the occasion inspired. Yet a voice seemed borne on the air. It appeared to say to the manes of the illustrious dead, "**WASHINGTON**, thou friend and father of my youth, under whose heroic banner I first gained renown in the fields of fame, when combatting for the rights and liberties of man—in whose bosom I was cherished in the earliest, the happiest days of life—whose affections descended with me from the palace to the dungeon—whose arms were opened to receive my child, when forlorn and a wanderer from his native land, he sought in thee a friend and found a father—most truly great and glorious of men, while such an

humble mound alone contains thy ashes, thy monument is based on a hemisphere, and thy fame will cenotaph thy memory in ages yet unborn. Accept the last duty which filial homage pays to the tomb of Washington in the tear of La Fayette."

We make no apology for the insertion of these interesting particulars. But we regret sincerely that the whole of the address and reply cannot find room, and if our readers have *feeling*, they will regret it too.

The first session of the nineteenth congress opened at Washington in December, 1825. The message of the Executive, after adverting to the state of peace which had for several years blessed the world, says—During the same period, our intercourse with all those nations has been pacific and friendly—it so continues. Since the close of your last session, no material variation has occurred in our relations with any one of them. In the commercial and navigation system of Great Britain, important changes of municipal regulation have recently been sanctioned by acts of parliament, the effect of which, upon the interests of other nations, and particularly upon ours, has not yet been fully developed. In the recent renewal of the diplomatic missions on both sides, between the two governments, assurances have been given and received, of the continuance and increase of that mutual confidence and cordiality by which the adjustment of many points of difference had already been effected, and which affords the surest pledge for the ultimate satisfactory adjustment of those which still remain open, or may hereafter arise.

He then notices the commission for settling the seventh article of the treaty of Ghent, and that respecting the indemnity for slaves taken off by the British during the late war, as in a train of amicable adjustment. He also adverts to the importance of establishing a national system of bankruptcy, and of improvements in the militia system. In noticing the pecuniary concerns of the nation, the message says—Among the unequivocal indications of our national prosperity, is the flourishing state of our finances. The revenues of the present year, from all their principal sources, will exceed the anticipations of the last.

The balance in the treasury, on the first of January last, was a little short of two millions of dollars, exclusive of two millions and a half, being the moiety of the loan of five millions, authorized by the act of 26th May, 1824. The receipts into the treasury, from the 1st of January to the 30th of September, exclusive of the other moiety of the same loan, are estimated at sixteen millions five hundred thousand dollars; and it is expected that those of the current quarter will exceed five millions of dollars, forming an aggregate of receipts of nearly twenty-two millions, independent of the loan. The expenditures of the year will not exceed that sum more than two millions. By those expenditures, nearly eight millions of the principal of the public debt have been discharged.

More than a million and a half has been devoted to the debt of gratitude to the warriors of the revolution; a nearly equal sum to the construction of fortifications, and the acquisition of ordnance, and other permanent preparatives of national defence; half a million to the gradual increase of the navy; an equal sum for purchases of territory from the Indians, and payment of annuities to them; and upwards of a million for objects of internal improvement, authorized by special acts of the last congress. If we add to these four millions of dollars for payment of interest upon the public debt, there remains a sum of about seven millions, which has defrayed the whole expense of the administration of government, in its legislative, executive, and judiciary departments, including the support of the military and naval establishments, and all the occasional contingencies of a government co-extensive with the union.

The amount of duties secured on merchandise imported, from the commencement of the year, is about twenty-five millions and a half; and that which will accrue, during the current quarter, is estimated at five millions and a half; from these thirty-one millions, deducting the drawbacks, estimated at less than seven millions, a sum exceeding twenty-four millions will constitute the revenue of the year, and will exceed the whole expenditures of the year. The entire amount of public debt remaining

due on the 1st of January next, will be short of eighty one millions of dollars.

Speaking of our situation as regards the aborigines, he thus speaks:—Our relations with the numerous tribes of aboriginal natives of this country, scattered over its extensive surface, and so dependent, even for their existence, upon our power, have been, during the present year, highly interesting. An act of congress, of 25th May, 1824, made an appropriation to defray the expenses of making treaties of trade and friendship with the Indian tribes beyond the Mississippi. An act of 3d March, 1825, authorized treaties to be made with the Indians, for their consent to the making of a road from the frontiers of Missouri to that of New-Mexico.

And another act of the same date, provided for defraying the expenses of holding treaties with the Sioux, Chippewas, Menomenees, Sauks, Foxes, &c. for the purpose of establishing boundaries and promoting peace between said tribes. The first and the last objects of these acts have been accomplished, and the second is yet in a process of execution. The treaties which, since the last session of congress, have been concluded with the several tribes, will be laid before the senate for their consideration, conformably to the constitution. They comprise large and valuable acquisitions of territory; and they secure an adjustment of boundaries, and give pledges of permanent peace between several tribes which had been long waging bloody wars against each other.

On the 12th of February last, a treaty was signed at the Indian Springs, between commissioners appointed on the part of the United States, and certain chiefs and individuals of the Creek nation of Indians, which was received at the seat of government only a few days before the close of the last session of congress, and of the late administration. The advice and consent of the senate was given to it, on the 3d of March, too late for it to receive the ratification of the then President of the United States; it was ratified on the 7th of March, under the unsuspecting impression that it had been negotiated in good faith, and in the confidence inspired by the recommendation of the senate. The subsequent transactions in rela-

tion to this treaty, will form the subject of a separate message.

But our circumscribed limits prevent us from touching, with any thing like justice, on this able state paper. We can only say, that nothing seems to have escaped his capacious mind, of very general and national importance.

By the report of the treasurer this session, it appears he had a balance of more than five millions in his hands. During this session a question was agitated relating to the holding of any office under the government of the United States, by a senator or representative to congress. Mr. Benton, from the selected committee, reported—

That, having had recourse to the history of the times, in which the constitution was formed, the committee find that the proposition now referred to them had engaged the deliberations of the federal convention which framed the constitution, and of several of the state conventions which ratified it.

In an early stage of the session of the federal convention, it was resolved as follows :

“ Art. 6, sec. 9. The members of each house (of congress) shall be ineligible to, and incapable of holding any office under the authority of the United States, during the time for which they shall respectively be elected ; and the members of the senate shall be ineligible to, and incapable of, holding any such office for one year afterwards.” (*Journal of the Federal Convention, page 219.*)

It further appears from the journal, that this clause in the first draft of the constitution, was adopted with great unanimity, and that afterwards, in the concluding days of the session, it was altered, and its intention defeated, by a majority of a single vote, in the absence of one of the states by which it had been supportèd.

Following the constitution into the state convention which ratified it, the committee find, that, by the New-York convention, it was recommended, as follows :

“ That no senator or representative shall, during the time for which he was elected, be appointed to any office under the authority of the United States.”

By the Virginia convention, as follows :

“ That the members of the senate and house of repre

sentatives shall be ineligible to, and incapable of, holding any civil office under the authority of the United States, during the term for which they shall respectively be elected."

By the North Carolina convention the same amendment was recommended, in the same words.

In the first session of the first congress, which was held under the constitution, a member of the house of representatives submitted a similar proposition of amendment; and, in the third session of the eleventh congress, James Madison being president, a like proposition was again submitted, and being referred to a committee of the house, was reported by them in the following words :

"No senator or representative shall be appointed to any civil office, place, or emolument, under the authority of the United States, until the expiration of the presidential term in which such person shall have served as a senator or representative."

Upon the question to adopt this resolution, the vote stood 71 yeas, 40 nays, wanting but three votes of the constitutional number for the referring it to the decision of the states.

Having thus shown, by a reference to the venerable evidence of our early history, that the principle of the amendment now under consideration, has had the support and approbation of the first friends of the constitution, the committee will now declare their own opinion in favour of its correctness, and express its belief that the ruling principle in the organization of the federal government demands its adoption.

That ruling principle demands that the three great branches of the federal government, the executive, legislative and judiciary, should be separate and distinct from each other, not only in contemplation of law, but in point of fact; and, for this end, that each should not only have its independent organization, but that the individuals administering each, should be wholly free from the control and influence of the individuals who administered the others.

To secure this independence on the part of the president, and to prevent the executive from starving him into

a compliance with their will, by withholding his necessary support, or seducing him into an acquiescence in their views, by tempting his avarice with an augmented salary, (*Fed. No. 77.*) it is provided in the constitution, that he shall receive a *fixed* compensation for his services, which shall neither be increased nor diminished during the term for which he was elected.

To secure the independence of the legislative department, and to prevent the executive from influencing its deliberations, by retaining a set of dependants in the senate and house of representatives, always ready, like the placemen in the British parliament, to support the measures of administration, it was provided, in the same constitution, that persons holding offices under the authority of the United States, should be wholly excluded from the floor of congress.

The committee believe that this provision for the independence of the senate and house of representatives, though wise and proper as far as it goes, does not go far enough to accomplish the object it had in view. They admit that the presence of office holders in the legislative department, would be the bane of honest and independent legislation; and they believe that the presence of office hunters would be equally fatal. The danger to be apprehended from each, is, in effect, the same. The office holder would support the measures of administration, for the purpose of saving the office which he had in possession; the office hunter would support the same measures for the purpose of securing the office which he had in expectation.

By either party, the interest of the country would be sacrificed to the views of the executive; and the appropriate means for preventing this mischief, was first to exclude office holders from seats in congress, and this the constitution has done; and, secondly, to prevent senators and representatives from taking appointments from the president, under whose administration they had served; and this it has omitted to do. The omission was too material to escape the observation of those who were not blind to the defects of the constitution; and their animadversions were too loud and vehement to pass unno-

ticed by the great advocates for the ratification of the instrument. The authors of the *Federalist*, in their *No 55*. felt it to be their duty to meet the objection which grew out of this omission. But even these great men, with their superior abilities, and ardent zeal in the best of causes, could do no more than to diminish the quantum of a danger which could not be denied to exist, and to cover, with a brilliant declamation, a part of their beloved constitution which could not be defended. They said :

“ Sometimes we are told, that this fund of corruption, (executive appointments,) is to be exhausted by the President in subduing the virtue of the senate. Now, the fidelity of the other house is to be the victim. The improbability of such a mercenary and perfidious combination of the several members of the government, standing on as different foundations as its republican principles will well admit, and at the same time accountable to the society over which they are placed, ought alone to quiet this apprehension. But, fortunately, the constitution has provided a still further safeguard. The members of the congress are rendered ineligible to any civil offices that may be created, or of which the emoluments may be increased, during the term of their election. No offices, therefore, can be dealt out to the existing members, but such as may become vacant by ordinary casualties ; and to suppose that these would be sufficient to purchase the guardians of the people, selected by the people themselves, is to renounce every rule by which events ought to be calculated, and to substitute an indiscriminate and unbounded jealousy, with which all reasoning must be vain.”

They doubted the validity of these arguments, and concluded the report as follows : Considering all which, the committee have come to the unanimous resolution to submit to the senate a proposition of amendment to the constitution of the United States, embracing the principle of this report.

Resolved, by the senate and house of representatives of the United States of America in congress assembled, two thirds of both houses concurring, that the follow

ing amendment to the constitution of the United States be proposed to the legislatures of the several states; which, when ratified by three fourths of said legislatures, shall be valid, to all intents and purposes, as part of said constitution:

No senator or representative shall be appointed to any civil office, place or emolument, under the authority of the United States, until the expiration of the presidential term in which such person shall have served as a senator or a representative.

During the session, and on the fourth of July, just half a century from the time when Adams and Jefferson signed the Declaration of Independence, they both departed this life, within a few hours of each other. They had both been presidents of the United States, and both vice presidents. This is certainly an extraordinary coincidence, and worthy to be perpetuated in the archives of the nation. Nor is it a little remarkable, that on this day, after its observance by the national legislature, certain members of congress addressed the legislature on the pecuniary embarrassments of Mr. Jefferson, with a view to his relief. The following extracts, we believe, will be acceptable.

If I am asked why Jefferson is singled out amid his compatriots—my answer is, he stands pre-eminent alike for his services and his misfortunes. God forbid that I should diminish the just claims of that illustrious band, who, guided by the polarity of their superior genius, and by a courage that was above circumstances, to whom the blessing of Providence became a pillar of light—by which we were conducted through the wilderness of the land of promise. But as one star differeth from another star in glory, so also is the lot of man. It was his good fortune to occupy the front rank among the illustrious. He is one of three survivors, signers of the Declaration of Independence. His associates are comfortable, and need no aid.

If it be inquired how it has happened that he has become impoverished? I answer, the delicacy of the subject forbids the inquiry. I may ask, however, what public institution is there in the United States that has not pro-

fited of his bounty? What son or daughter of affliction who has asked for aid, that has not received his charity? What nation, tongue, or kindred, that has not shared his hospitality? His fame had gone abroad in the earth. He was justly esteemed a distinguished benefactor of mankind. He was resorted to as an oracle, that they might hear with their own ears, from his own lips, the sublime and the eternal truths of religious liberty. His doors were open to all. His responses were withheld from none. The sequel was inevitable—a loss of his property. He disinterestedly sacrificed his independence on the altar of all the virtues. The character of his country was ennobled by the sacrifice. It will be still further ennobled by its being replaced by the generosity of his countrymen.

The second session of the nineteenth congress commenced on the fourth day of December, 1826. The president's message, after noticing the unfinished and untouched subjects of his former message, notices the decease of Alexander of Russia, our commerce with France, and a ratified treaty with Denmark, says:—"With Prussia, Spain, Portugal, and in general all the European powers, between whom and the United States, relations of friendly intercourse have existed, their condition has not materially varied since the last session of congress. I regret not to be able to say the same of our commercial intercourse with the colonial possessions of Great Britain in America.

Negotiations of the highest importance to our common interests have been for several years in discussion between the two governments, and on the part of the United States have been invariably pursued in the spirit of candour and conciliation. Interests of great magnitude and delicacy have been adjusted by the conventions of 1815 and 1818, while that of 1822, mediated by the late Emperor Alexander, had promised a satisfactory compromise of claims which the government of the United States, in justice to the rights of a numerous class of their citizens, was bound to sustain. But, with regard to the commercial intercourse between the United States and the British colonies in America, it has been hitherto found impracticable to

bring the parties to an understanding satisfactory to both. The relative geographical position, and the respective products of nature cultivated by human industry, had constituted the elements of a commercial intercourse between the United States and British America, insular and continental, important to the inhabitants of both countries.

But it had been interdicted by Great Britain upon a principle heretofore practised by the colonizing nations of Europe, of holding the trade of their colonies, each in exclusive monopoly to herself. After the termination of the late war, this interdiction had been revived, and the British government declined including this portion of our intercourse with her possessions, in the negotiation of the convention of 1815. The trade was then carried on exclusively in British vessels, till the act of congress concerning navigation, of 1818, and the supplemental act of 1820, met the interdict by a corresponding measure on the part of the United States. These measures, not of retaliation, but of necessary self-defence, were soon succeeded by an act of parliament, opening certain colonial ports to the vessels of the United States, coming directly from them, and to the importation from them of certain articles of our produce, burdened with heavy duties, and excluding some of the most valuable articles of our exports.

The United States opened their ports to British vessels from the colonies, upon terms as exactly corresponding with those of the act of parliament, as in the relative condition of the parties could be made. And a negotiation was commenced by mutual consent, with the hope, on our part, that a reciprocal spirit of accommodation, and a common sentiment of the importance of the trade to the interests of the inhabitants of the two countries between whom it must be carried on, would ultimately bring the parties to a compromise, with which both might be satisfied. With this view the government of the United States had determined to sacrifice something of that entire reciprocity, which, in all commercial arrangements with foreign powers, they are entitled to demand, and to acquiesce in some inequalities disadvantageous to our

selves, rather than to forego the benefit of a final and permanent adjustment of this interest, to the satisfaction of Great Britain herself.

The negotiation, repeatedly suspended by accidental circumstances, was, however, by mutual agreement, and express assent, considered as pending, and to be speedily resumed. In the mean time, another act of parliament, so doubtful and ambiguous in its import, as to have been misunderstood by the officers in the colonies who were to carry it into execution, opens again certain colonial ports, upon new conditions and terms, with a threat to close them against any nation which may not accept those terms as prescribed by the British government.

This act passed in July, 1825, not communicated to the government of the United States, not understood by the British officers of the customs in the colonies where it was to be enforced, was, nevertheless, submitted to the consideration of congress at their last session. With the knowledge that a negotiation upon the subject had long been in progress, and pledges given of its resumption at an early day, it was deemed expedient to await the result of that negotiation, rather than to subscribe implicitly to terms, the import of which was not clear, and which the British authorities themselves, in this hemisphere, were not prepared to explain.

He closes the subject of British difficulties, by trusting that the misunderstanding noticed would not have an unpropitious effect on other subjects connected with our mutual relations.

He then alludes to the Panama mission, and presses the opinion that we ought to be there represented.

Of our fiscal concerns, and the contemplated reduction of the public debt, he speaks in favourable terms. Of the military and naval departments he speaks in a favourable manner, and extols the management of the post office department.

The conclusion is as follows :

In closing this communication, I trust it will not be deemed inappropriate to the occasion and purposes upon which we are here assembled, to indulge a momentary retrospect, combining, in a single glance, the period of ou.

origin as a national confederation with that of our present existence, at the precise interval of half a century from each other. Since your last meeting at this place, the fiftieth anniversary of the day when our independence was declared, has been celebrated throughout our land, and on that day, when every heart was bounding with joy, and every voice was tuned to gratulation, amid the blessings of freedom and independence, which the sires of a former age had handed down to their children, two of the principal actors in that solemn scene, the hand that penned the ever memorable declaration, and the voice that sustained it in debate, were, by the summons, at the distance of seven hundred miles from each other, called before the Judge of all, to account for their deeds done upon earth.

They departed, cheered by the benedictions of their country, to whom they left the inheritance of their fame, and the memory of their bright example. If we turn our thoughts to the condition of their country, in the contrast of the first and last day of that century, how resplendent and sublime is the transition from gloom to glory! Then glancing through the same lapse of time, in the condition of the individuals, we see the first day marked with the fulness and vigour of youth, in the pledge of their lives, their fortunes, and their sacred honour, to the cause of freedom and of mankind. And on the last, extended on the bed of death, with but sense and sensibility left to breathe a last aspiration to Heaven, of blessing upon their country; may we not humbly hope that to them too, it was a pledge of transition from gloom to glory; and that while their mortal vestments were sinking into the clod of the valley, their emancipated spirits were ascending to the bosom of their God!

During the session, a number of interesting reports were made from the different departments, and a number of valuable documents presented. The famous treaty with M'Intosh, and other Creek chiefs, was put under examination, and condemned.

This treaty, it may be recollected, was made by M'Intosh in a clandestine manner, for which he subsequently suffered death. Circumstances and clear testimony were

adduced, to show that this was the state of the treaty, and it was no longer considered obligatory on either the United States or the Creek nation. To show the spirit of hostility manifested by the executive of Georgia, nothing more is necessary than to copy the two following orders. It is only necessary to state, that Georgia had long coveted the Creek lands, and by collusion with some chiefs, determined to possess them even at the point of the bayonet, and the destruction of the aborigines. We rejoice that the general government stopped the torrent of usurpation, and exhibited the features of firmness, justice, and generosity

Executive Department, Geo. Milledgeville, Feb. 17, 1827.

Ordered, That the attorney and solicitors general of this state, in every instance of complaint made of the arrest of any surveyor engaged in the survey of the late acquired territory, by any civil process under the authority of the government of the United States, do take all necessary and legal measures to effect the liberation of the person so arrested, and to bring to justice, either by indictment or otherwise, the officers or parties concerned in such an arrest, as offenders against the laws, and violators of the peace and personal security of the public officers and citizens of this state. That they give professional advice and assistance in their defence against any prosecution or action which may be instituted against them as officers in the service of the state, and that they promptly make known to this department their acts and doings in the premises. It is moreover enjoined on the civil magistrates of this state, having competent jurisdiction of the same, to be acting and assisting in inquiring into the cause of every such arrest or detention as aforesaid, that the person may be discharged forthwith, if illegally or unjustly detained, and in affording such redress to the aggrieved or injured party, as by law he may be entitled to receive.

By the governor,

E. H. PIERCE, *Sec'y.*

Head quarters, Milledgeville, 17th Feb. 1827.

ORDERS.

The major generals commanding the 6th and 7th divisions, will immediately issue orders to hold in readiness the several regiments and battalions within their respective commands, to repel any hostile invasion of the territory of this state. Depots of arms and ammunition central to each division will be established in due time.

By the commander in chief,

JOHN W. A. SANDFORD, *Aid-de-Camp.*

This congress closed its session on the third of March, and the twentieth congress opened its sittings on the third of December, 1827.

On the fourth, the message of the president was received and read in both houses. After giving a general, but concise and elevating view of our situation as a people, he thus speaks of our foreign concerns:—Our relations of friendship with the other nations of the earth, political and commercial, have been preserved unimpaired, and the opportunities to improve them have been cultivated with anxious and unremitting attention. A negotiation upon subjects of high and delicate interest, with the government of Great Britain, has terminated in the adjustment of some of the questions at issue upon satisfactory terms, and the postponement of others for future discussion and agreement.

The purposes of the convention concluded at St. Petersburg, on the 12th day of July, 1822, under the mediation of the late Emperor Alexander, have been carried into effect by a subsequent convention, concluded at London on the 13th of November, 1826, the ratifications of which were exchanged at that place on the 6th day of February last. A copy of the proclamation issued on the nineteenth day of March last, publishing this convention, is herewith communicated to congress. The sum of twelve hundred and four thousand nine hundred and sixty dollars, therein stipulated to be paid to the claimants of indemnity under the first article of the treaty of Ghent, has been duly received, and the commission instituted,

conformably to the act of congress of the second of March last, for the distribution of the indemnity to the persons entitled to receive it, are now in session, and approaching the consummation of their labours.

This final disposal of one of the most painful topics of collision between the United States and Great Britain, not only affords an occasion of gratulation to ourselves, but has had the happiest effect in promoting a friendly disposition, and in softening asperities upon other objects of discussion. Nor ought it to pass without the tribute of a frank and cordial acknowledgment of the magnanimity with which an honourable nation, by the reparation of their own wrongs, achieves a triumph more glorious than any field of blood can ever bestow.

The conventions of 3d July, 1815, and of 20th October, 1818, will expire, by their own limitation, on the 20th October, 1828. These have regulated the direct commercial intercourse between the United States and Great Britain, upon terms of the most perfect reciprocity; and they effected a temporary compromise of the respective rights and claims to territory westward of the Rocky Mountains. These arrangements have been continued for an indefinite period of time, after the expiration of the above mentioned conventions; leaving each party the liberty of terminating them, by giving twelve months notice to the other. The radical principle of all commercial intercourse between independent nations, is the mutual interest of both parties. It is the vital spirit of trade itself; nor can it be reconciled to the nature of man, or to the primary laws of human society, that any traffic should long be willingly pursued, of which all the advantages are on one side, and all the burdens on the other.

Treaties of commerce have been found, by experience, to be among the most effective instruments for promoting peace and harmony between nations whose interests, exclusively considered on either side, are brought into frequent collisions by competition. In framing such treaties, it is the duty of each party not simply to urge with unyielding pertinacity that which suits its own interest, but to concede liberally to that which is adapted to the

interest of the other. To accomplish this, little more is generally required than a simple observance of the rule of reciprocity; and were it possible for the statesmen of one nation, by stratagem and management, to obtain from the weakness or ignorance of another, an over-reaching treaty, such a compact would prove an incentive to war, rather than a bond of peace. Our conventions with Great Britain are founded upon the principles of reciprocity.

The commercial intercourse between the two countries is greater in magnitude and amount, than between any two other nations on the globe. It is, for all purposes of benefit or advantage, to both, as precious, and, in all probability, far more extensive, than if the parties were still constituent parts of one and the same nation. Treaties between such states, regulating the intercourse of peace between them, and adjusting interests of such transcendent importance to both, which have been found, in a long experience of years, mutually advantageous, should not be lightly cancelled or discontinued. Two conventions, for continuing in force those above mentioned, have been concluded between the plenipotentiaries of the two governments, on the 6th of August last, and will be forthwith laid before the senate for the exercise of their constitutional authority concerning them.

He then alludes to the execution of the treaties of 1782, and 1783, respecting the boundary line of the Union, showing that difficulties had arisen respecting their adjustment. Commissioners had been appointed by both parties, to settle these questions, but the object had not been fully accomplished, and a convention of September, 1826, was intended for reference to the senate. He then notices a communication from the governor of Maine, touching the difficulties respecting territorial jurisdiction, which had occurred in the vicinity of that state, and concludes the subject by stating that he had taken measures to obtain the best information of facts in the case, which should be communicated when received. He also reverts to the difficulties and embarrassments arising from the British colonial regulations, which he states as not yet approximating to a friendly understanding.

In speaking of France, he states, that our commerce with that people is increasing, while it is a source of regret, that our demands on that government for spoliations, remain unsettled. With the kingdom of Sweden a new treaty had been concluded, and a minister plenipotentiary from the Hanseatic towns received. With Russia we are at peace, and the good understanding which subsisted with Alexander, has not been interrupted by the succession of his brother Nicholas to the empire.

Of the Greeks he speaks most feelingly, and notices the letter of thanks from the president of that country, which was to be translated, and placed before congress.

Alluding to our southern neighbours, he says : " In the American hemisphere the cause of freedom and independence has continued to prevail ; and if signalized by none of those splendid triumphs which had crowned with glory some of the preceding years, it has only been from the banishment of all external force against which the struggle had been maintained. The shout of victory has been superseded by the expulsion of the enemy over whom it could have been achieved. Our friendly wishes, and cordial good will, which have constantly followed the southern nations of America in all the vicissitudes of their war of independence, are succeeded by a solicitude, equally ardent and cordial, that by the wisdom and purity of their institutions, they may secure to themselves the choicest blessings of social order, and the best rewards of virtuous liberty.

The message then alludes to our remaining difficulties with Brazil, which he had taken measures to settle, and finally returns to the more grateful subjects of our internal concerns thus :

" Turning from the momentous concerns of our union, in its intercourse with foreign nations, to those of the deepest interest in the administration of our internal affairs, we find the revenues of the present year corresponding, as nearly as might be expected, to the anticipations of the last, and presenting an aspect still more favourable in the promise of the next. The balance in the treasury, on the first of January last, was six millions

three hundred and fifty-eight thousand six hundred and eighty-six dollars and eighteen cents. The receipts from that day to the 30th of September last, as near as the returns of them yet received can show, amount to sixteen millions eight hundred and eighty-six thousand five hundred and eighty-one dollars and thirty-two cents. The receipts of the present quarter, estimated at four millions five hundred and fifteen thousand, added to the above, form an aggregate of twenty-one millions four hundred thousand dollars of receipts. The expenditures of the year may perhaps amount to twenty-two millions three hundred thousand dollars, presenting a small excess over the receipts. But of these twenty-two millions, upwards of six have been applied to the discharge of the principal of the public debt; the whole amount of which, approaching seventy-four millions on the first of January last, will, on the first day of next year, fall short of sixty-seven millions and a half. The balance in the treasury, on the first of January next, it is expected, will exceed five millions four hundred and fifty thousand dollars, a sum exceeding that of the first of January, 1825, though falling short of that exhibited on the first of January last.

“It was foreseen that the revenue of the present year would not equal that of the last, which had itself been less than that of the next preceding year. But the hope has been realized which was entertained, that these deficiencies would in no wise interrupt the steady operation of the discharge of the public debt, by the annual ten millions devoted to that object, by the act of 3d March, 1817.

“The amount of duties secured on merchandise, imported from the commencement of the year, until the 30th of September last, is twenty-one millions two hundred and twenty-six thousand; and the probable amount of that which will be secured during the remainder of the year, is five millions seven hundred and seventy-four thousand dollars; forming a sum total of twenty-seven millions. With the allowances for drawbacks and contingent deficiencies which may occur, though not specifically foreseen, we may safely estimate the receipts of

the ensuing year at twenty-two millions three hundred thousand dollars; a revenue for the next, equal to the expenditure of the present year.

“The deep solicitude felt by our citizens of all classes throughout the union for the total discharge of the public debt, will apologize for the earnestness with which I deem it my duty to urge this topic upon the consideration of congress—of recommending to them again the observance of the strictest economy in the application of the public funds. The depression upon the receipts of the revenue, which had commenced with the year 1826, continued with increased severity during the two first quarters of the present year. The returning tide began to flow with the third quarter, and, so far as we can judge from experience, may be expected to continue through the course of the ensuing year. In the meantime, an alleviation from the burden of the public debt will, in the three years, have been effected, to the amount of nearly sixteen millions, and the charge of annual interest will have been reduced upwards of one million.

“But among the maxims of political economy which the stewards of the public moneys should never suffer without urgent necessity, to be transcended, is that of keeping the expenditures of the year within the limits of its receipts. The appropriations of the two last years, including the yearly ten millions of the sinking fund, have each equalled the promised revenue of the ensuing year. While we foresee with confidence that the public coffers will be replenished from the receipts, as fast as they will be drained by the expenditures, equal in amount to those of the current year, it should not be forgotten that they could ill suffer the exhaustion of larger disbursements.”

After noticing the measures taken with a view to internal improvements, he mentions the report from the post office department, as very satisfactory and encouraging, and closes by recommending the subject of pensions to our remaining revolutionary officers and soldiers, as a debt of *justice*, rather than one of gratitude.

The report of the treasurer states, that more than six millions and a quarter, by estimation, would be in his

hands on the first of January, and recommends an addition to the tariff of 1824. The article of domestic manufactures, are estimated at more than seven millions, exported. Other exports at about eighty millions. He states that many articles of home manufacture had become cheaper, more abundant, and of superior quality, since the adoption of the tariff, than before, and presses on the country the importance of increasing the tariff, particularly on wool, and woollen goods, fine cotton goods, bar iron and hemp. It is not possible, however in this condensed sketch, to give an outline of this valuable report.

Early in the session steps were taken to ascertain the importance of revising thoroughly the tariff system of 1824. A committee was appointed, clothed with ample powers to investigate the subject. This report was made in February, from which we shall give a few extracts.

After stating the many obstacles necessary to be overcome, and the labours to which they were subject, the committee proceeds: This labour being performed, the committee at once began their examinations of such witnesses, members of the house, and others, as were within their reach, and believed to be possessed of valuable and practical information upon any of the subjects before them. The examination of these witnesses was not completed when the arrival of some attending under summonses was announced.

An application was then immediately made to the house for leave to sit during the hours of session of the house; and nearly every day since that leave was granted, has been entirely occupied, to the almost total neglect of other public and private duties, in the laborious examination of witnesses, pursuant to the resolution under which the committee were acting. It is but justice here to remark, that the original expectation of the committee, under the resolution offered by them to the house, was to have made an expeditious inquiry into the situation of one or two manufacturing interests, rather to enable them to determine what further protection these interests really required, than with the expectation, within the limited time which they had allowed to themselves for the purpose of

being able to collect and report to the house, a body of evidence upon several important branches of our domestic manufactures, so digested and arranged as to be of any essential service to the house, or to the public, as a source of correct information upon these complicated subjects.

The amendment, however, which was made to the resolution by the house, so as to give the committee the authority "to send for, and examine persons upon oath, in relation to the present condition of our manufactures, and to report the minutes of such examination to this house," it will readily be seen, added greatly to the labour which the committee had proposed for themselves; as, by that amendment, it was made the duty of the committee, should they think proper to examine witnesses, to take their testimony in detail, and in such order as to render it at least passably intelligible to the house. This additional labour was in no other way exceptionable to the committee, than as it rendered somewhat doubtful their ability to give their report to the house within the time which they had signified that it would be received. But, even under this apprehension, so desirous were the committee of a full developement of the facts, that the amended resolution met their approbation; and they entered upon their duties, determined, if possible, to realize the expectations of the house, so far, at least, as regarded a report within the time they had indicated.

They have examined a little short of thirty witnesses, and the testimony of each, hastily written out by way of question and answer, and annexed to this report, will show what facts have been collected by the examination, as well as the extent of the labour which the committee have performed. The testimony of each witness, after it was taken, had been carefully read over with him, and so corrected as to meet the full assent of the witness to its accuracy.

The leading subjects presented to the committee for additional protection, are iron, and several manufactures of it, wool, and its fabrics, hemp, and some of the manufactures from it, flax, and its manufactures, and domestic distilled spirits from grain, particular descriptions of glass, and fine and printed cottons. Upon all these subjects witnesses have been examined, and their testimony

herewith reported, comprises the evidence, upon each subject, which the committee have taken under the resolution of the house, and embodies most of the information upon which they have acted in determining the features of the bill which they have agreed upon.

The first subject which will be found in the bill, is that of iron, and considering the importance of the article, as one of both national and individual necessity, the changes in the present rates of duty are comparatively very light.

The next subject in order is that of wool and woollens. To these subjects the greater part of the testimony of the witnesses has been directed, and the committee have used every effort in their power to obtain precise information as to the facts as they do actually exist in relation to the interests both of the wool grower and the manufacturer of wool. The real importance of these subjects to those sections of the country where wool is grown, and in which the manufactories are located, the feeling which has for some time agitated the public mind throughout the whole country, in relation, on the one side, to the necessity of further protection to them, and on the other side, to the injurious effects which such a measure would have upon the purchasers of woollen fabrics, have all conspired to induce this exertion on the part of the committee.

They have therefore made the examinations of the witnesses, upon those subjects, as minute as possible, and, perhaps, in some instances, they may appear tediously so. Indeed, many of the questions put to the witnesses, will afford abundant evidence that the committee had not sufficient practical knowledge upon the subjects before them, to enable them to make a series of interrogations the answers to which would place the testimony taken in the clearest light. And when the members of the house shall have examined the evidence relating to the manufacture of woollen goods, the committee cannot doubt they will be entirely convinced that none but a person intimately acquainted with the various operations, could have drawn out a series of questions upon the subject, susceptible of clear and intelligible answers.

The time of the committee did not authorize even an attempt to do this, and, therefore, the examinations, and particularly of some of the witnesses first examined, will appear as they were really taken—the one answer, in many, if not in most instances, suggesting the subsequent question. It will also be found, upon an examination of the testimony, that the manufacture of woollens is hardly susceptible of being reduced within the limits of exact mathematical calculation, so as to enable the committee to arrive, with this kind of certainty, at the amount of duty which will furnish full protection, and at the same time, will not go beyond that point. Certain positions, however, they believe to be proved by the evidence they have taken, which furnish great assistance in approaching to correct conclusions.

From all which the committee could gather on the subject, they think the following positions may be fairly stated:—

1st. That the manufacture of woollen goods in this country, is, at this time, a business labouring under severe depressions, and attended with loss more severe upon the finer qualities.

2d. That these depressions are owing, in a very great degree, to the excessive and irregular importations of foreign woollen goods into our markets: thus causing a fluctuation in, and an uncertainty of price for those goods, more injurious to the American manufacturer than even the depression of price which these importations produce.

3d. That the differences between the prices of wool, of the same quality, in this country and in England, is at the present time about fifty per cent. in favour of the latter country.

4th. That the cost of raw wool in this country is about one half of the cost of the fabric, when prepared for the market, as a general rule applying to most kinds of cloths.

5th. That if the cost of the wool and the cost of the foreign materials used for dyeing, were the same in both countries, the process of manufacturing the wool into cloth, fitted for the market, can be performed as cheap in this country as it can in England.

6th. That the present duty on woollen goods does not furnish the desired protection, and that no reasonable duty can be effectual, unless it be a specific square yard, instead of an ad valorem duty.

Taking, then, these positions as granted, the committee proposed to lay the following duties:—

1st. Upon all manufactures of wool, or of which wool shall be a component part, the actual value of which, at the place whence imported, shall not exceed fifty cents per square yard, a specific duty of sixteen cents upon every square yard.

2d. Upon all manufactures of wool, or of which wool shall be a component part, the actual value of which, at the place whence imported, shall exceed fifty cents per square yard, and shall not exceed \$1 per square yard, a specific duty of 40 cents upon every square yard.

3d. Upon manufactures of wool, or of which wool shall be a component part, the actual value of which, at the place whence imported, shall exceed \$1 per square yard, and shall not exceed \$2,50 per square yard, a specific duty of \$1 upon every square yard.

4th. Upon all manufactures of wool, or of which wool shall be a component part, the actual value of which, at the place whence imported, shall exceed \$2,50 per square yard, and shall not exceed \$4 per square yard, shall be deemed to have cost \$4 per square yard, and at such valuation shall be charged with, and pay a duty of 40 per centum, ad valorem.

5th. Upon all manufactures of wool, &c. the actual value of which, at the place whence imported, shall exceed \$4 per square yard, shall be charged with, and pay a duty of 45 per centum, ad valorem.

The attention of the committee was next turned to hemp and flax, and certain manufactures from them. After showing that our country can raise and manufacture from these articles to advantage, and that, in some points, they form an important item in the products of this country, they propose to lay a duty of \$10 the ton on raw hemp, and \$9 the ton on flax, and would make the rate of duty progressive, until it should arrive at \$60 the ton on each.

On foreign distilled spirits, the committee proposed an additional duty of ten cents, and on foreign molasses, an increase of five cents the gallon.

The great importance of a national system, is so evident, that few doubt the propriety of a tariff for the protection of domestic manufactures. This was the all absorbing business of the last session, and the measure has been effected. Whether all the details are unexceptionable, is left for practice to determine. If faults should be discovered, they can be remedied by the legislature. If it should have an unequal bearing on different sections of the Union, the difficulty may be obviated; or, if not, the only evils which will remain are those which are inseparable from all general systems. All that can be required, is the greatest good of the whole as a nation.

That opposition should be manifested to any great national change is not surprising; it would rather surprise if this were not the case. No such change can be made, without effecting individual interest. But where the great, the permanent interests, and permanent prosperity of the country are at stake, both wisdom and duty dictate that the minor interests should give way. The balance of trade has been long enough against us. Commercial difficulties, and scarcity of money, substantiate the fact conclusively. To retrace our steps, and take an independent stand, was our only safe alternative, and we rejoice that this course has been pursued, because we are fully persuaded that the step will ultimately result in good.

Remarks upon Part Third.

The Mississippi, the Missouri, the Ohio, no longer flows through a wilderness; large three masted ships sail up them, and more than two hundred steam-boats enliven their banks.

Thus the United States cherish within their bosom, under the protection of liberty, an image and a memorial of most of the celebrated places of ancient and modern Europe--like that garden in the Campagna of Rome, in which Adrian had models of the different monuments of his empire erected.

It should be observed, that there is scarcely a county but has a town, village, or hamlet, called Washington : touching unanimity of the gratitude of a nation !

Thirty high roads meet at Washington, as the Roman roads met at ancient Rome, and, diverging from that point, run to the circumference of the United States. The whole forming an interior circulation of roads of 25,747 miles.

From the points to which these roads tend, it is obvious that they traverse tracts formerly wild, but now cultivated and inhabited. On a great number of these roads you may travel, post, or public stage coaches, carry you from place to place at a moderate price. You may now take the rail road for the Ohio, or the Falls of Niagara, as in former time you engaged an Indian guide or interpreter. Cross roads branch off from the principal roads, and are equally provided with the means of conveyance. These means are almost always of two kinds, for as there are every where lakes and rivers, you may travel either in row boats, sail boats, or steam vessels.

Vessels of the latter class make regular trips from Boston and New-York to New-Orleans ; they are likewise established on the lakes of Canada, the Ontario, the Erie, the Michigan, the Champlain ; on those lakes, where, thirty years ago, scarcely the canoes of the savages were to be seen, and where ships of the line now engage one another.

The steam vessels of the United States are not only subservient to the wants of commerce, and of travellers, but are also employed for the defence of the country ; some of them, of immense size, placed at the mouth of rivers, armed with cannon, and boiling water, resemble at one and the same time, modern citadels and fortresses of the middle ages.

To the twenty-five thousand seven hundred and forty-seven miles of general roads, must be added the extent of four hundred and nineteen district roads, and of fifty-eight thousand one hundred and thirty-seven miles of water-ways. The canals increase the number of the latter : the Middlesex canal joins the harbour at Boston with the Merrimack ; the Champlain canal forms a communica-

tion between that lake and the Canadian seas ; the famous Erie or New-York canal, now unites Lake Erie and the Atlantic ; the Santee, Chesapeake, and Albemarle canals, were constructed by the states of Carolina and Virginia ; and as broad rivers, running in different directions, approach towards their sources, nothing was easier than to connect them together. Five roads to the Pacific Ocean are already known ; one only of these roads passes through the Spanish territory.

A law of congress, passed in the session of 1824—5, directs the establishment of a military post at Oregon. The Americans, who have a settlement on the Columbia, can thus penetrate to the great ocean by a zone of land nearly six degrees in breadth, between English, Russian, and Spanish America.

There are, nevertheless, natural limits to colonization. The forests to the north and west of the Missouri, are bounded by immense steppes, where not a tree is to be seen, and which seem to be unsusceptible of culture, though grass grows abundantly upon them. This verdant Arabia affords a passage to the colonists who repair in caravans to the Rocky Mountains, and New-Mexico ; it separates the United States of the Atlantic, from the United States of the South Sea, like those deserts, which, in the old world, are interposed between fertile regions. An American has offered to construct, at his own expense, a solid high road from St. Louis, on the Mississippi, to the mouth of the Columbia, if congress will grant him a tract ten miles in depth, on either side of the road. This gigantic proposal has not been accepted.

In the year 1789, there were only seventy-five post offices in the United States ; there are now upwards of seven thousand. From 1790 to 1795, these offices increased from seventy-five to four hundred and fifty-three ; in 1800 their number was nine hundred and three ; in 1805 they amounted to fifteen hundred and fifty-eight ; in 1810 to two thousand three hundred ; in 1817 to three thousand three hundred and fifty-nine ; in 1820 to four thousand and thirty ; in 1830 to nearly eight thousand.

Letters and packets are conveyed by mail coaches, which travel about one hundred and fifty thousand miles a day, and by couriers, on horseback and on foot.

Offices for the sale of public lands are opened in the states of Ohio, Indiana, Michigan, Wisconsin, Missouri, Arkansas, Louisiana, Mississippi, and Alabama. It is computed that one hundred and fifty millions of acres of land fit for cultivation, exclusively of the soil of vast forests, yet remain to be disposed of. These hundred and fifty millions of acres are estimated to be worth fifteen hundred millions of dollars, at the average rate of ten dollars per acre, and reckoning the dollars at no more than three francs—a very low calculation in every respect.

We find twenty-five military posts in the northern states, and twenty-two in the southern.

In 1790, the population of the United States was 3,929,326 souls; in 1800, it was 5,305,666; in 1810, 7,239,300; in 1820, 9,609,827. This last number included 1,581,436 slaves.

The population of the United States has increased every ten years, from 1790 to 1820, at the rate of thirty-five per cent. Eight years have already elapsed of the ten, which will be completed in 1830, when, it is presumed, the population of the United States will be little short of 12,875,000 souls: and the state of Ohio will have 850,000 inhabitants, and that of Kentucky 750,000.

If the population were to go on doubling every twenty-five years, the United States would have, in 1855, a population of 25,750,000 souls; and in twenty-five years more, that is to say, in 1880, that population would exceed 50,000,000.

In 1821, the value of native and foreign productions exported from the United States amounted to the sum of 64,974,382 dollars. In the same year the public revenue was 14,264,000 dollars: the excess of the receipts beyond the expenditure was 3,334,826 dollars. In the same year, also, the national debt was reduced to 89,204,235 dollars.

The army has sometimes been raised to one hundred thousand men: and the navy of the United States is composed of eleven sail of the line, nine frigates, and fifty other ships of various sizes.

It is superfluous to say any thing concerning the con-

stitutions of the different states; it is sufficient to know that they are all free.

There is no predominant religion, but every citizen is expected to conform to some mode of Christian worship. The catholic religion is making considerable progress in the western states.

Supposing, which I believe to be the case, that the statistical summaries published by the United States are exaggerated by the national vanity, still there will be left a total of prosperity well worthy of our highest admiration.

To complete this astonishing picture, we must figure to ourselves cities like Boston, New-York, Philadelphia, Baltimore Savannah, New-Orleans, lighted at night, filled with horses and carriages, offering all the gratifications of luxury, brought to their ports by thousands of ships; we must figure to ourselves the lakes of Canada, formerly so solitary, now covered with frigates, brigs, cutters, boats steam vessels, intermixed with the canoes of the Indians, as the large ships and galleys are with pinks, sloops, and caiques, in the waters of the Bosphorus. Churches and houses, embellished with columns of Grecian architecture, rise from amidst these forests, and on the banks of these rivers, the ancient ornaments of the wilderness. Add to these, spacious colleges, observatories, erected for science in the abode of savage ignorance; all religions, all opinions, dwelling together in peace, labouring in concert for the melioration of the human race, and the development of the human understanding. Such are the prodigies of liberty.

The Abbe Raynal offered a prize for a solution of the question: "What influence will the discovery of the New World have upon the Old World."

Writers lost themselves in calculations relative to the exportation and importation of the precious metals, the depopulation of Spain, the increase of commerce, the improvement of the navy: nobody, as far as I know, sought the influence of the discovery of America upon Europe, in the establishment of the American republics. They figured to themselves the old monarchies continuing in much the same state as they then were, society sta

tionary, the human mind neither advancing nor retrograding; they had not the least idea of the revolution which, in the space of twenty years, has taken place in opinions.

The most valuable of the treasures which America contains within her bosom is liberty; every nation is called to work this inexhaustible mine. The discovery of the representative republic by the United States, is one of the greatest political events that ever occurred. This event proves, as I have elsewhere observed, that there are two practicable kinds of liberty; the one belonging to the infancy of nations, the offspring of manners and virtue, the liberty of the first Greeks and of the first Romans, and the liberty of the savages of America; the other, born in the old age of nations, the offspring of knowledge and reason, the liberty of the United States, which has superseded the liberty of the Indian. Happy country, which, in less than three centuries, has passed from one liberty to the other, almost without effort, and by means of a contest which lasted only eight years!

Will America preserve this last kind of liberty? Will there not be a division of the United States? May we not already perceive the germs of these divisions? Has not a representative of Virginia already supported the thesis of the ancient Greek and Roman liberty, with the systems of slavery, against a deputy of Massachusetts, who advocated the cause of modern liberty without slaves, such as Christianity has made it?

Will not the western states, extending themselves farther and farther, and being too remote from the Atlantic states, be desirous of having a government to themselves?

Lastly, are the Americans a perfect people? have they not their vices like other men? are they morally superior to the English, from whom they derive their origin? Will not the tide of foreign emigration, incessantly pouring upon them from all parts of Europe, eventually destroy the homogeneousness of their race? Will not the mercantile spirit gain ascendancy? Is not self-interest beginning to be a predominant national defect among them?

We are also obliged to confess with pain, that the establishment of the republics of Mexico, Colombia, Peru,

Chili, and Buenos Ayres, is pregnant with danger to the United States. While the latter had about them nothing but the colonies of a transatlantic kingdom, war was not probable.

May not rivalships now spring up between the old republics of North America, and the new republics of Spanish America? Will not the latter interdict alliance with European powers? If both sides should have recourse to arms—if the military spirit should take possession of the United States, a great captain might arise; glory loves crowns; soldiers are but brilliant forgers of chains, and liberty is not sure of preserving its patrimony under the guardianship of victory.

Let what will happen, liberty will never be entirely banished from America; and here it is right to specify one of the great advantages possessed by liberty, the offspring of manners.

Liberty, the offspring of manners, perishes when its principle deteriorates, and it is in the nature of manners to deteriorate with time.

Liberty, the offspring of manners, begins before despotism, in the days of poverty and obscurity: it is lost in despotism, and in ages of glory and luxury.

Liberty, the offspring of knowledge, shines after ages of oppression and corruption; it advances with the principle which preserves and renews it, the knowledge of which it is the effect, instead of becoming feeble with time, like the manners which gave birth to the first liberty—knowledge, I say, grows stronger on the contrary with time; thus, it forsakes not the liberty which it has produced; constantly about that liberty, it is at once its generative virtue and its inexhaustible source.

To conclude—the United States have one safeguard more; their population does not occupy an eighteenth part of their territory. America still dwells in the wilderness; for a long time to come, her deserts will be her manners, and knowledge her liberty.

RELIGION.—The consequences resulting from the enjoyment of religious liberty have been highly favourable. Free discussion has enlightened the ignorant, disarmed superstition of its dreadful powers, and consigned to

oblivion many erroneous and fantastic creeds. Religious oppression, and the vindictive feelings it arouses, are hardly known. Catholics and Protestants live together in harmony; and Protestants who disagree, employ, in defending their own doctrines, and in assailing those of their antagonists, the weapons only of reason and eloquence.

In the New-England states, the independents, or congregationalists, constitute the most numerous denomination; in the middle states, the Presbyterians; and, in the southern, the Methodists. Baptists, Episcopalians, and Roman Catholics, are found in all the states; but, in Maryland and Louisiana, the Catholics are more numerous than elsewhere. Each of these sects has one or more seminaries of learning, in which its peculiar doctrines are taught, and young men are educated for the ministry. Many other sects exist, but reason, less tolerant than the laws, is gradually diminishing the number.

AGRICULTURE in 1820.—The number of persons engaged in agriculture was 2,870,646. The value of all its products exported during the year ending the 30th of September, 1823, was 37,646,000 dollars. The principal articles were, cotton to the value of 20,445,000 dollars; flour to the value of 4,962,000 dollars; tobacco to the value of 4,852,000 dollars; and rice to the value of 1,821,000 dollars. The value of provisions of all kinds exported, was 13,460,000 dollars, and it has, in many years, been greater. A people able to spare such an amount of the necessaries of life, can never be in danger of suffering from want.

COMMERCE.—The state of the world, for several years subsequent to the commencement of the French revolution, offered great encouragement to the commercial enterprise of the country. While almost every other power was engaged in war, the United States were neutral; their vessels navigated the ocean in safety, and were employed to carry, from port to port, the commodities of the belligerent nations. In fifteen years, beginning with 1793, these favourable circumstances increased the amount of American tonnage from 491,000 to 1,242,000 tons, and

the revenue arising from commerce, from 4,399,000 to 16,363,000 dollars.

In 1820, the number of persons engaged in commerce was 72,493. In 1823, the whole amount of exports was 74,799,000 dollars; the amount of imports was 77,579,000 dollars, the balance in favour of the United States being about three millions of dollars. As the imports, however, are always undervalued at the custom house, the additional wealth, which, in that year, accrued to the nation from commerce, was undoubtedly greater.

In other years, the commerce of the country has flourished more. In 1807, the exports amounted to 108,343,000 dollars, and the imports to 138,574,000 dollars. The principal causes of the decline which has taken place, have been, the restoration of peace in Europe, and the increase of the product of domestic manufactures. The former has permitted all other nations to become our competitors; the latter has rendered it unnecessary to resort to Europe for most of the conveniences, and many of the luxuries of life. The depression will not long continue. The independence of the South American republics, has opened a wide field for the enterprise of our merchants, and given a brighter hue to their future prospects.

DEBT, REVENUE, AND EXPENDITURES.—When, in 1790, the public debt was first funded, it amounted to about 75,000,000 of dollars. In 1803, by the purchase of Louisiana, it was augmented to about 85,500,000. In the eight years which followed, a large amount was paid, leaving due, in 1812, but little more than 45,000,000. To defray the expenses of the war, which was declared in that year, more than 80,000,000 of new debt was contracted. A large portion has since been paid, and, on the first day of January, 1823, the amount of it was 90,865,877 dollars.

The present revenue of the republic is derived principally from commerce, and from the sale of public lands. In 1822, there accrued from the former source, the sum of 20,500,775 dollars; from the latter source, 1,803,581 and from other sources, 839,084. The amount, however

Masonic Hall, New-York.

Erie Canal.

which was actually received, during the year, was but 20,232,427.

The expenditures during the same year, were as follows: Civil, diplomatic, and miscellaneous, 1,967,996; for the pay and support of the army, the construction of forts, the supply of arms, the payment of pensions, and the various expenses of the Indian department, 5,635,188; for the support and increase of the navy, 2,224,458; for the payment of the interest, and for the redemption of that portion of the principal of the debt which became due within the year, 7,848,949; amounting in the whole to 17,676,591, and leaving an excess of revenue over expenditure of 2,555,836 dollars.

Great Britain may be taken as a favourable example of the European governments. The people of that kingdom pay, annually, for the support of their sovereign and his relatives, nearly two and a half millions of dollars, while the compensation of the president of the United States is but twenty-five thousand. In the salaries of the subordinate officers of government, the disproportion is not so great, but is generally, nevertheless, as four or five to one.

The military peace establishment of Great Britain costs annually thirty-four millions of dollars; that of the United States but little more than five millions. The naval establishment of the former costs twenty-two millions; that of the latter less than two and a half millions. British subjects pay in taxes, raised exclusively for national purposes, at the rate of fifteen dollars yearly for each individual; the citizens of the United States pay, in national and state taxes, at the rate of but two dollars. And as the whole population of Great Britain and Ireland is included in the estimate, the individual wealth of the subjects of the united kingdom, and of the citizens of the American republic, may on an average, be considered nearly equal.

On the fourth of March, A. D. 1829, Andrew Jackson took the oath of office as president of the United States, for the term of four years, and John C. Calhoun vice president—our country being in a very prosperous and flourishing state, the national debt being greatly decreased,

and things in general wore a very pleasing appearance. The nation is tranquil, and remains unmoved. The constitution and laws of our country do not rest on the point of mercenary bayonets, and freedom of sentiment makes up the moral power which is, at once, the envy and wonder of the world.

The following is the Inaugural Address of General Andrew Jackson, on being sworn into the office of President of the United States.

FELLOW CITIZENS : About to undertake the arduous duties that I have been appointed to perform, by the choice of a free people, I avail myself of this customary and solemn occasion, to express the gratitude which their confidence inspires, and to acknowledge the accountability which my situation enjoins. While the magnitude of their interests convinces me that no thanks can be adequate to the honour they have conferred, it admonishes me that the best return I can make, is the zealous dedication of my humble abilities to their service and their good.

As the instrument of the Federal Constitution, it will devolve on me, for a stated period, to execute the laws of the United States ; to superintend their foreign and their confederate relations ; to manage their revenue ; to command their forces ; and, by communications to the legislature, to watch over and promote their interests generally. And the principles of action by which I shall endeavour to accomplish this circle of duties, it is now proper for me briefly to explain.

In administering the laws of congress, I shall keep steadily in view the limitations as well as the extent of the executive power, trusting thereby to discharge the functions of my office without transcending its authority. With foreign nations it will be my study to preserve peace, and to cultivate friendship on fair and honourable terms ; and in the adjustment of any difference that may exist or arise, to exhibit the forbearance becoming a powerful nation, rather than the sensibility belonging to a gallant people.

In such measures as I may be called on to pursue, in

regard to the rights of the separate states, I hope to be animated by a proper respect for those sovereign members of our Union; taking care not to confound the powers they have reserved to themselves, with those they have granted to the confederacy.

The management of the public revenue, that searching operation in all governments, is among the most delicate and important trusts in ours; and it will, of course, demand no inconsiderable share of my official solicitude. Under every aspect in which it can be considered it would appear that advantage must result from the observance of a strict and faithful economy. This I shall aim at the more anxiously, both because it will facilitate the extinguishment of the national debt, the unnecessary duration of which is incompatible with real independence; and because it will counteract the tendency to public and private profligacy, which a profuse expenditure of money by the government, is but too apt to engender. Powerful auxiliaries to the attainment of this desirable end, are to be found in the regulations provided by the wisdom of congress, for the specific appropriation of public money, and the prompt accountability of public officers.

With regard to a proper selection of the subjects of impost, with a view to revenue, it would seem to me that the spirit of equity, caution, and compromise, in which the constitution was formed, requires that the great interests of agriculture, commerce, and manufactures, should be equally favoured; and that, perhaps, the only exception to this rule, should consist in the peculiar encouragement of any products of either of them that may be found essential to our national independence.

Internal improvement, and the diffusion of knowledge, so far as they can be promoted by the constitutional acts of the federal government, are of high importance.

Considering standing armies as dangerous to free governments, in time of peace, I shall not seek to enlarge our present establishment, nor disregard that salutary lesson of political experience, which teaches that the military should be held subordinate to the civil power. The gradual increase of our navy, whose flag has displayed, in distant climes, our skill in navigation, and our fame in

arms ; the preservation of our forts, arsenals, and dock-yards, and the introduction of progressive improvements in the discipline and science of both branches of our military service, are so plainly prescribed by prudence, that I should be excused for omitting their mention, sooner than for enlarging on their importance. But the bulwark of our defence is the national militia, which, in the present state of our intelligence and population, must render us invincible. As long as our government is administered for the good of the people, and is regulated by their will—as long as it secures to us the rights of person and of property, liberty of conscience, and of the press. it will be worth defending ; and so long as it is worth defending, a patriotic militia will cover it with an impenetrable *ægis*. Partial injuries, and occasional mortifications we may be subjected to, but a million of armed freemen, possessed of the means of war, can never be conquered by a foreign foe. To any just system, therefore, calculated to strengthen this natural safeguard of the country, I shall cheerfully lend all the aid in my power.

It will be my sincere and constant desire to observe towards the Indian tribes within our limits a just and liberal policy ; and to give that humane and considerate attention to their rights and their wants, which are consistent with the habits of our government, and the feelings of our people.

The recent demonstration of public sentiment inscribes, on the list of executive duties, in characters too legible to be overlooked, the task of *reform* ; which will require particularly the correction of those abuses that have brought the patronage of the Federal government into conflict with the freedom of elections, and the counteraction of those causes which have disturbed the rightful course of appointment, and have placed or continued power in unfaithful or incompetent hands.

In the performance of a task thus generally delineated, I shall endeavour to select men whose diligence and talents will ensure, in their respective stations, able and faithful co-operation ; depending, for the advancement of the public service, more on the integrity of the public officers, than on their numbers

A diffidence, perhaps too just, in my own qualifications, will teach me to look with reverence to the examples of public virtue left by my illustrious predecessors, and with veneration to the lights that flow from the mind that founded, and the mind that reformed our system. The same diffidence induces me to hope for instruction and aid from the co-ordinate branches of the government, and for the indulgence and support of my fellow citizens generally. And a firm reliance on the goodness of that Power whose Providence mercifully protected our national infancy, and has since upheld our liberties in various vicissitudes, encourages me to offer up my ardent supplications, that he will continue to make our beloved country the object of his divine care, and gracious benediction.

Washington, 4th March, 1829.

GENERAL ANDREW JACKSON—

SIR: We, a few of the surviving officers and soldiers of the army of the revolution, now convened at this place, most respectfully solicit the honour of forming your escort to the capitol, where you are about to be inaugurated as president of the United States.

Former events, and our advanced ages, preclude the idea that this is designed to be a military pageant; no, sir, it is far otherwise; having fought in the defence of the sacred rights of man, and for the liberty, sovereignty, and independence of these United States, now happily bound together, as we fondly hope, by an indissoluble chain, we feel desirous to avail ourselves of the opportunity of being present when the guardianship of these invaluable benefits shall be deposited in your hands.

The valour, the judgment, the independence of mind, the prudence, the firmness, and the true patriotism of our great commander, Washington, led us triumphantly through the revolutionary war, and the nation through the first periods of the federal constitution; and we have entire confidence that the exercise of the same transcendent virtues, will, under God, preserve inviolate our liberties, independence, and union, during your administration—and it is our most ardent prayer that they may be perpetual—may your days be long and happy—may

increasing honours multiply on your head—and, like your first predecessor, may you add a civic monument to your martial glory ; and, like his, may they be imperishable.

We have the honour to be, with the highest respect, your most obedient servants, William Polk, chairman—John Nicholas, Aaron Ogden, Abraham Broom, Robert Bolling, Elnathan Sears, Robert Kaene, J. Woodsidez, Philip Stewart, Armistead Long, Jno. M. Taylor, John Browne Cutting, Caleb Stark, William Gamble, Jacob Gideon, sen.

To this address the president made the following reply :

Respected friends—Your affectionate address awakens sentiments and recollections which I feel with sincerity, and cherish with pride. To have around my person, at the moment of undertaking the most solemn of all duties to my country, the companions of the immortal Washington, will afford me satisfaction, and grateful encouragement. That, by my best exertions, I shall be able to exhibit more than an imitation of his patriotic labours, a sense of my own imperfection, and the reverence I entertain for his virtues, forbid me to hope.

To you, respected friends, the survivors of that heroic band, who followed him so long, and so valiantly, in the path of glory, I offer my sincere thanks, and to heaven my prayers, that your remaining years may be as happy as your toils and your lives have been illustrious.

ANDREW JACKSON.

The following shows the rank which the persons above named held at the close of the revolutionary war.

William Polk, colonel, North Carolina ; John Nicholas, lieutenant colonel, Virginia ; Aaron Ogden, captain, New-Jersey ; Robert Bolling, captain, Virginia ; William Gamble, major, New-Jersey ; Philip Stewart, lieutenant, Virginia ; Caleb Stark, lieutenant, and D. C. N. Hampshire : Jno. M. Taylor, lieut. colonel, Penn. ; Abraham Broom, lieut. Maryland ; Elnathan Sears, lieut., New-York ; Absalom Baker, private, S. Carolina ; Jacob Gideon, private, Virginia ; Armistead Long, private, Virginia cavalry.

*In the House of Representatives of the U. S. on Feb. 21,
the following Report was made :*

The committee on roads and canals, to which was referred the memorial of the Baltimore and Ohio rail road company, Report,

That this company was incorporated by an act of the legislature of Maryland, in February, 1827, which has since been confirmed by the states of Virginia and Pennsylvania, through which it is supposed the road will pass in its progress to the Ohio river. The company was organized in April, 1827.—The capital stock of the company consists of four millions of dollars, three of which have been subscribed by private individuals, and the fourth by the state of Maryland and the city of Baltimore. On this stock there has been paid, by instalments, seven and a half per centum, and a further call of 2 1-2 per centum, payable on the 10th of March next, has been in a great measure anticipated.

The execution of the work was commenced on the 4th of July last, and has progressed with unusual spirit and activity. The graduation and bridging of twenty-five miles of the most expensive and difficult part of the route is under active operation, and is in a successful train of execution. An improved rail road car of recent invention, has been put in operation on the temporary railways constructed for the removal of earth for the graduation of the road, which promises the most important and beneficial results in the diminution of the power necessary for the transportation of heavy burdens on rail roads. The highest estimate made of the cost of this work has been \$20,000 per mile, and the experience of the company, we are assured, proves that it cannot exceed and will most probably fall short of this sum. The distance from the city of Baltimore to the River Ohio may vary from 300 to 350 miles, so that the whole cost of executing this magnificent enterprise will not perhaps exceed seven millions of dollars.

The committee believe that this work, if successfully executed, will greatly promote the interests of the union, and will be of national importance in reference to our great military and commercial operations, and as a means

for the safe and speedy transmission of the mail. Individuals who have acquired their estates by industry and prudence, have invested millions in the stock of this company. Associated with the venerable name of Charles Carroll, of Carrollton, are found the names of many gentlemen of wealth, high character, and great enterprise. It can hardly be thought necessary for the committee to enter into a long argument or statistical detail of facts, to prove the advantages which will be derived from the successful completion of this work. When we advert to the various agricultural productions of the great sections of our country to be connected by this road,—to their exhaustless mines of iron and coal,—their forests and quarries, and to the amount of foreign and domestic merchandise necessary for their supply, no doubt can be entertained but that the interest of the nation requires that the facilities of transportation between them, should be increased by every practicable means.

When corporations and individuals go before us in the execution of works, truly national in their character and objects, this government will not withhold its aid when we thus most effectually promote the diffusion of intelligence, secure the rapid movement and concentration of troops and military stores in war, extend the commerce of the states, and give permanency to the union. We should be urged to aid in that and similar works, when assured of their practicability from the consideration that the territory which will soon contain more than half the states in the union is separated from the seat of the national government, by a rough and mountainous region, over which we have not constructed even a road on which we can with any reasonable safety and expedition transmit the mail, or convey to our Atlantic cities the rich and various productions of the west.

The committee have witnessed with regret the legal controversy which unfortunately exists between the railroad company, and the Chesapeake and Ohio canal company, and which they believe might easily be settled to the mutual interest of the parties, by the cultivation of a proper spirit, and a disposition to promote, by the most efficient means, the great interests of the country, inde

pendent of local jealousies and competition. In the favourable views entertained of the proposed rail-road, the committee have not lost sight of the Chesapeake and Ohio canal, of which congress has expressed its decided approbation by various acts, and for the construction of which a liberal appropriation has been made; nor in any aid by which they propose to quicken the energies of the association, would they in any manner compromit the interests of the other. It has been suggested, that the right acquired by the Chesapeake and Ohio canal company, to construct a rail-road from Cumberland, across the mountains to the west, precludes the rail-road company from constructing a similar work, under their subsequent charter, between the same points. While the committee do not, at this time, feel themselves called upon to express any opinion upon this question, it is, perhaps, not to be regretted, that the delay induced by other causes will afford ample opportunities for such surveys and examinations to be made, as shall demonstrate the practicability or inexpediency of these works in a manner satisfactory to the respective companies, and thus conduce to the best interests of the public; and should the result of such examinations, and the experience which time will bring with it, prove unfavourable to the plans and objects of either company, an additional incentive to those already mentioned, will be presented for an union of interests and operations between all parties, by which will be attained, with still greater certainty, the great object—a communication between the eastern and navigable waters.

In examining the charter of the rail-road company, the committee are aware, that the provision prohibiting any other company or person from travelling upon, or using any of the roads of the company without its license, seems to render it obnoxious to the charge of a close monopoly; but they have considered, that in the transportation of all property on the railway, wagons of a particular and uniform construction only must be used, each having a proper adaptation to the rail, and that this consideration, with others which might be given, may require such a provision in the charter—the committee see no cause of alarm from this restriction. The interests of

the company will, at all times, be best promoted by consulting that of the public. Time and experience will disclose the methods by which the great and paramount interests of the community can be most effectually subserved, and there can be no doubt but that the patriotic views which prompted this undertaking, will lead to the adoption of such regulations as shall prove best calculated to secure a safe, cheap, and speedy communication.

When the Chesapeake and Ohio canal, and the Baltimore and Ohio rail-road, shall both have been completed to the point of their junction below Harper's Ferry, the relative advantages of each will be fully demonstrated and no doubt is entertained by the committee, but that their interests may be harmonized. The common object of both, by which the great interests of the nation are to be advanced, is to open the best practicable communication between the Chesapeake Bay and the great valley of the Mississippi. The hope is entertained, that these companies will co-operate in effecting, by their united means this great enterprise, in which the prosperity of the whole nation is so deeply involved. If experience shall justify the opinion, that the rail-road will furnish greater practical advantages than the canal, the committee would cheerfully recommend a liberal appropriation to the stock of the company, but as the completion of a part of the work before the next session, will, it is hoped, realize in its advantages the wishes and expectations of the company the committee defer reporting a bill, or substituting any proposition on the subject, at this late period of the session. They are the more readily reconciled to this delay. (the result of necessity,) from the circumstance that this enterprising association, proceeding, as they appear to have done, with a caution proportioned to the magnitude of the undertaking, have sent scientific and practical engineers to examine the most important works of this description in England, the result of whose observations will enable the company to prosecute the work under more favourable auspices, and will also furnish important data for the information of congress, whenever they may be required to legislate on this interesting subject.

CHAPTER XVIII.

A Review of the Progress of the Western States, from their formation and adoption into the Union as Independent States, down to the present time.

KENTUCKY.

This state first claims our attention; it is bounded north by Illinois, Indiana, and Ohio; east by Virginia; south by Tennessee, and west by Mississippi. It extends from lat. $36^{\circ} 30'$ to $39^{\circ} 10'$ north, and from long. $81^{\circ} 50'$ to $89^{\circ} 20'$ west. Length on the southern line 300 miles; extent 39,000 square miles, or 24,960,000 acres.

Kentucky was adopted into the Union, and held an independent station among her sister states, in 1792. Col. Daniel Boone, with some of his friends, explored these parts in 1769; he continued in the vicinity of Kentucky until 1771, when he returned. But in 1773, he, with his family, together with five other families, and forty men, left Powell's valley, so called, and after many accidents and detentions, reached Kentucky River, in March, 1775, where they immediately commenced a settlement. In 1778, 1779, and 1780, a large number of persons emigrated to this territory; but their distresses were so great, occasioned by cruel treatment from the savages, and scarcity of provision, that they were on the point of abandoning the enterprise. But Gen. Clark soon after subdued the Indians, and laid waste their villages, which gave security to the settlers, and the settlement continued to advance.

RIVERS.—The river Ohio washes the northwestern side of Kentucky. Its principal branches, which water this fertile tract of country, are the Sandy, Licking, Kentucky, Salt, Green, and Cumberland rivers. These again branch in various directions, into rivulets of different magnitudes, fertilizing the country in all its parts.

Kentucky River is very crooked, and after running a course of more than 200 miles, empties into the Ohio.

Salt River rises at four different places, near each other. The windings of this river are very curious; the four

branches, after a circuitous course round a fine tract of land, unite; and, after running about 15 miles, empty into the Ohio, 20 miles below the falls. Its general course is westward, its length 90 miles, and at its mouth is 80 yards wide. Green and Cumberland Rivers are of considerable note; and all the above rivers are navigable for boats almost to their sources. The banks of the rivers are generally high, and composed of limestone. Limestone is very abundant in this state, and commonly lies about six feet below the surface, except in valleys, where the soil is much thinner.

SPRINGS.—There are several salt springs in this state, from which large quantities of salt is manufactured. There are numerous mounds and ancient fortifications; also many caves; a very large one, near Green river, has been explored to the distance of 10 miles. Large quantities of saltpetre are manufactured from the earth which is gathered at the bottom of these caves.

Face of the Country, Soil and Productions.—A tract of land, about 20 miles wide, along the Ohio, is hilly, and broken; it is interspersed with many fertile spots. The rest of the country is agreeably uneven, gently ascending and descending. The soil on these agreeable ascents, (for they cannot be called hills,) is sufficiently deep as is evident from the size of the trees; the soil is of a darkish complexion.

In many places there are appearances of potter's clay and coal in abundance. The land east of Nolin Creek, a branch of Green River, is, in general, of an inferior quality; but the banks of Green River afford many desirable situations.

Towards the head waters of Kentucky River, which interlocks with the waters of Cumberland and Sandy Rivers, the country is broken and mountainous.

Elkhorne River, a branch of the Kentucky, from the southward, waters a country fine beyond description. The country east and south of this, including that situated at the head waters of Licking River, in the vicinity of Hickman's and Jessamine Creeks, and the remarkable bend in Kentucky River, may be called an extensive garden. The soil is deep and black, and the

timber large. On this fertile tract, and on the Licking and head waters of Salt River, are the places on which most of the early settlements were made.

Dick's River runs through a great body of first rate land, and affords many mill seats. Near the head of Salt River the land is good, but low and unhealthy.

The country is generally well timbered; of the natural growth, we may reckon the sugar, the coffee tree resembling the black oak, the hackberry, and the cucumber tree. Such is the variety and beauty of the flowering shrubs and plants which grow spontaneously in this country, that in the proper season, the wilderness appears in full blossom.

The accounts of the fertility of the soil have, in some instances, exceeded belief, and probably have been exaggerated. That some parts, particularly the high grounds, are remarkably good, all agree; large quantities of wheat and corn are raised, and more or less of rye, barley, oats, flax, hemp, and abundance of all kinds of vegetables, but very little is done with cotton; tobacco is brought to perfection. Swamps are rare in Kentucky; and, of course, the reptiles which they produce, such as snakes, frogs, &c., not numerous.

The CLIMATE is healthy and delightful; some few places, in the neighbourhood of ponds and low grounds excepted. The inhabitants do not experience the extremes of heat or cold. The winter season is generally mild, and of short duration; snow seldom falls, and lies but a short time.

The CHIEF TOWNS, are Frankfort, Lexington, and Louisville. *Frankfort* is the capital of the state, and seat of justice for Franklin county; it is regularly laid out on the east side of Kentucky river, sixty miles above its confluence with the Ohio, 27 miles west-northwest of Lexington, 51 east of Louisville, and 102 south-southwest of Cincinnati. It contains a state house, 86 by 54 feet; a court-house; a penitentiary, containing from 80 to 130 convicts; a jail, academy, market house, and several printing offices, manufactories, &c. The site of the town is a semicircular alluvial plain, from 150 to 200 feet lower than the table lands in its rear. The river here is about 80 yards wide,

and after heavy rains frequently rises 60 feet. Opposite Frankfort, and connected with it, is South Frankfort, which is rapidly increasing. Steam-boats of 300 tons burthen come up the river as far as this place, when the water is high. Most of the foreign goods consumed in Kentucky, are landed here and at Louisville.

Lexington is the capital of Fayette county; it is situated in a beautiful valley, on Town Fork, a small stream which falls into the south branch of Elkhorne River, 25 miles east-southeast of Frankfort; it is regularly laid out, and contains a court-house and other public buildings. The growth of this town has been exceedingly rapid. In 1797, it contained only about 50 houses; it is now a large and beautiful town, covered with stately and elegant buildings, and, in point of wealth and refinement, is surpassed by few places in the western country. The country around Lexington is much admired for the beauty of its scenery, and is adorned with many handsome country seats.

Louisville is pleasantly situated on an elevated and beautiful plain, on the south bank of the Ohio, immediately above the rapids, 120 miles below Cincinnati. It contains very handsome public buildings, and large manufacturing establishments are employed in this place. The business of this town has increased astonishingly within a few years; a large number of steam boats are employed in its commerce.

A stranger travelling through the state of Kentucky will meet with frank and cordial hospitality. The people are high minded, and possess a noble character. They are in a condition in life, which is, perhaps, best calculated to develope high mindedness and self-respect. We may find in this state, among the lower classes, ignorant, abandoned, and savage men; but we discover the same in every portion of the Union. Mostly, however, they are courageous, generous, and frank. The peculiar circumstances they were placed under in the last war, show that they only want incitement to display all that is noble in a people.

CURIOSITIES.—The banks, or rather precipices, of Kentucky and Dick's River are to be reckoned among the na-

tural curiosities of this country. Here the astonished eye beholds three or four hundred feet of solid perpendicular rock, in some parts of limestone, and in others of a fine white marble, curiously checked, with strata of astonishing regularity.

Caves have been discovered in this country of several miles in length, as before mentioned. Copperas and alum are among the minerals of Kentucky. Near Lexington, are found curious sepulchres full of human skeletons. It has been asserted, that a man in or near Lexington, having dug five or six feet below the surface of the ground, came to a large flat stone, under which was a well of common depth, regularly and artificially stoned.

TENNESSEE.

Tennessee is bounded north by Kentucky, east by North Carolina, south by Georgia, Alabama, and Mississippi, and west by the Mississippi River, which separates it from Arkansas Territory; it contains about 40,000 square miles, or 25,600,000 acres.

Face of the Country.—The Cumberland mountains consist of stupendous piles of craggy rocks, running from northeast to southwest, through the centre of the state, which divides it into east and west Tennessee. It contains much fertile soil, particularly on the banks of its rivers. The principal productions are cotton, flax, hemp, Indian corn, wheat, and tobacco.

Climate.—The climate is healthy; the season of vegetation generally commences six or seven weeks sooner than in New-Hampshire, Maine, or Vermont, and continues much longer; snow seldom falls or lies long; Cumberland River has been frozen over but a few times since the state has been settled. Tennessee was formed into a territorial government in 1790, and was admitted into the union as an independent state in 1796. The progress of Tennessee has been remarkably prosperous; she furnished a full share of those heroes who fought under General Jackson in the war with Great-Britain at the victory of New-Orleans, January, 1815. They are a brave, hardy, and industrious set of people. The principal

rivers are the Obian, Chickasaw, Forked, Deer, and Wolf rivers. The Cumberland River rises in Kentucky, and after making a circular line in this state, passes again into the state from which it arose. It is navigable for vessels of thirty or forty tons burthen to Nashville. During some part of the season, and when the river is high in time of freshet, it will float vessels of 400 tons.

Population, in 1790, was 35,691 ; in 1800, 105,602 ; in 1810, 261,727 ; and in 1820, 422,813. The most numerous denominations of Christians are Presbyterians, Methodists, and Baptists. Pop. in 1840, 829,210.

OHIO.

The state of Ohio is bounded north by Michigan Territory and Lake Erie, east by Pennsylvania, southeast by Kentucky, and west by Indiana. It extends from $38^{\circ} 30'$ to 42° north lat., and from $80^{\circ} 32'$ to $85^{\circ} 50'$ west long.; and contains 39,000 square miles, or 25,000,000 acres.

RIVERS.—The *Ohio* is the principal river which washes the southern line of the state. The principal tributaries of the Ohio, are the Muskingum, Hockhocking, Scioto, the Great and Little Miami. The *Muskingum*, rises in Portage county, near the northeast corner of the state, runs in a southerly direction, passes by Coshocton and Zanesville, and discharges itself into the Ohio at Marietta. After a course of 200 miles above Coshocton, it bears the name of Tuscarawa River. The navigation is obstructed by falls at Zanesville; but this obstruction affords many good mill seats. Above Zanesville, the river is navigable for large boats to Coshocton, and for small boats nearly to its source. The *Hockhocking* River rises in Fairfield county, runs in a southeasterly direction, and discharges itself into the Ohio, at Troy, 25 miles from Marietta. After a course of 80 miles, through a rough part of the country, this river is navigable for 70 miles, and affords some of the finest mill seats. The *Scioto* rises in Hardin county, runs in a southeasterly direction, passes by Columbus, Circleville, and Chillicothe, and discharges itself into the Ohio, at Portsmouth, after a course of 170 miles; for 130 miles it is

navigable The *Little Miami*, rises in Madison county runs in a southeasterly direction, and falls into the Ohio, seven miles above Cincinnati, after a course of 70 miles. This is one of the best mill streams in the state; nearly 40 mills are already erected upon it. The *Great Miami* rises in Hardin county, runs in a southeastern direction, passes through Shelby, Miami, Montgomery, Butler, and Hamilton counties, falls into the Ohio River, exactly at the southwest corner of the state, after a course of more than 100 miles. It is difficult to navigate this stream, on account of the rapidity of the current; this river also has a large number of mill seats.

The principal rivers which fall into Lake Erie, are the Maumee, Sandusky, and Cuyahoga. The *Maumee* is formed by the confluence of St. Joseph's and St. Mary's Rivers, at Fort Wayne, in the northeastern part of Indiana. It runs in a northeasterly direction, and falls into Maumee Bay at the western extremity of Lake Erie. The *Sandusky* River rises in Crawford county, runs at first in a westerly, afterwards in a northerly direction, and discharges itself into Sandusky Bay, after a course of more than 80 miles. It is navigable nearly to its source, and, in one part of its course, approaches within four miles of the navigable waters of the Scioto. The *Cuyahoga* River rises in Geauga county, in the northeastern part of the state, and discharges itself into the lake at Cleveland, after a circuitous course of more than 60 miles.

FACE OF THE COUNTRY.—That part of the land bordering on the lake, and some way into the interior, is generally level, and in some places marshy. About one quarter, or one third of the state, bordering on the Ohio River, is generally hilly and broken, but cannot consistently be called mountainous. But, immediately on the banks of the Ohio, and its tributaries, are numerous tracts of interval land of most excellent quality. On both sides of the Scioto, and also of the Great and Little Miami Rivers, is found extensive bodies of rich and level land. The whole of the land in this state may be considered good, and has generally proved satisfactory to emigrants. In many places are extensive prairies, particularly near

the head waters of the Muskingum and Scioto, and between the Scioto and the sources of the two Miami rivers. Some of these prairies are low and marshy, and yield spontaneously a large quantity of coarse grass from two to five feet high: others are elevated, and are called barrens, not, however, on account of their sterility, for they are often fertile. The high land which divides the waters of the Ohio River from those of Lake Erie, is the most marshy tract in the state; the driest land lies along the margin of the rivers.

PRODUCTIONS.—Wheat is the principal production. A large abundance of corn is, however, raised, and not unfrequently from 70 to 100 bushels is produced from an acre. Other kinds of grain, and fruits of various sorts, are also cultivated. Coal is found in abundance along the Ohio, in the eastern part of the state. Salt springs have been discovered and wrought in many places.

CLIMATE.—The climate of Ohio is considered warmer in the same parallels than that of the Atlantic states. The difference has been estimated by Mr. Jefferson to be the same as three degrees of latitude. Observations, however, which have been made at Cincinnati, for a series of years, prove that the difference is not more than one degree. The winters are generally mild; some parts, particularly the low marshy land, is subject to fevers and agues, but the state generally may be called healthy. The summers are warm, and generally pretty regular, although, sometimes, subject to tornadoes; one of a very destructive nature visited these parts in the month of March 1830; its vengeance seemed to be directed towards Urbana, a flourishing little village, situated about 43 miles west by north of Columbus. One house for public worship, and several private dwellings, were entirely demolished, and others, to the number of between sixty and seventy, were more or less injured; several lives were lost and a number of individuals badly bruised. The enterprising inhabitants of the place immediately lent a helping hand, and, in a great measure, restored the property of the sufferers.

CANALS.—A grant from congress, passed in 1825, to build a canal entirely across the state, and also one along

Settlement of Marietta, the first town of importance settled in the State of Ohio, April, 1788.—Page 467.

Father Hennepin, a Catholic Missionary from Canada, sailing down the Mississippi, in 1680: the first European who passed down this river. Settlement of St. Louis, Missouri.—Pages 475-478.

the valley of the Great Miami, from Cincinnati to Dayton, extending 66 miles. The latter is completed, and in successful operation; and it is now in contemplation to extend the Miami canal from Dayton to Lake Erie. The other, which passes under the title of the OHIO GRAND CANAL, commences at Cleveland, on Lake Erie, and extends in a southerly direction up the Cuyahoga River; continuing in the same direction, it strikes the Scioto River, just within the limits of Picaway county; it then follows the valley of the Scioto to the Ohio River, at Portsmouth; the length is about 300 miles. It has been in operation since 1832, and is doing a very extensive and profitable business.

The *Roads* are, in some part of the season, very bad, generally near the close of winter, and beginning of spring; few, if any stages, continue their routes at these times. The national road has caused great improvements to be made in this state. It passes west from Wheeling, in Virginia, through Zanesville, Columbus, the capital of the state, thence west through Springfield, the capital of Clark county; thence in a westerly direction through the state of Indiana to the banks of the Mississippi.

SETTLEMENT.—The first settlement of any note was begun at Marietta; the town was laid out by the Ohio company, and a settlement commenced early in the spring of 1788. This town is handsomely laid out on the western banks of the Ohio, and near the mouth of the Muskingum; the place has continued to increase, and contained, in 1820, 2036 inhabitants. Soon after this, Fort Washington was built, and, in the year 1789, Cincinnati was begun about seven miles below the mouth of the Little Miami. This place has of late increased most astonishingly; it contained, in 1827, about 25,000, and in 1840, 46,388 inhabitants. It contains a large proportion of manufactures, and very handsome public buildings, and holds the first rank of any place in the state. The progress of the state was considerably checked by the Indian wars; but General Wayne so completely defeated the aboriginal inhabitants in 1794, that it has not been disturbed since. It was admitted into the Union in 1802; since that time, the population of this state has been in-

creased by emigration from other parts of the Union, and Europe, beyond the most sanguine expectations. Strangers are surprised, in travelling through it, to find some as handsome and well laid out cities as are in the eastern states; and yet, in this place, a few years ago, there was nothing but a dreary wilderness. Many of the inhabitants, some not more than of middle age, can tell you the first house erected in the place where they live, which now contains perhaps from three to fifteen thousand inhabitants. This state was merely a forest sixty years ago, yet it now ranks among the first in the Union. Although the inhabitants are made up of emigrants from almost every part of the United States, and most of the countries of Europe, they unite harmoniously in the improvement of the country; yet they have not resided long enough together to form a fixed and uniform character. The majority of emigrants have been farmers in the eastern states; they are generally industrious, temperate, and frugal, and possess much intelligence and enterprise. The Presbyterians and Methodists are the most numerous of any Christian denomination in this state. There are some few Shakers, and a few societies of Friends.

Government.—The legislative power is vested in a general assembly, consisting of a senate and house of representatives. The representatives are chosen for one year, and their number cannot be less than thirty-six, nor more than seventy-two. The senators are chosen for two years, and their number must not be more than one half, nor less than one third of the representatives. The executive power is vested in a governor, who is chosen by the people for two years.

COMMERCE.—The principal exports from this state are horses, cattle, swine, whiskey, and flour. Large herds of swine are driven in autumn to Philadelphia, Baltimore and other eastern markets; besides, numbers are slaughtered for the use of navigators, and large supplies are sent to Detroit. The markets for the northern and interior part, are New-York and Montreal; but the southern portion of the state sends its produce down the Ohio and Mississippi rivers to New-Orleans.

POPULATION.—The population of this state in 1790, was 3,000; in 1800, it was 42,156; in 1810, 230,760, in 1830, 937,679, and in 1840, it was 1,519,467. The rapid progress of the population of this state, since 1791, will justify us in saying that it has not been surpassed by any other state, in the same period. The city of Cincinnati alone has a population of over 50,000.

ANTIQUITIES.—The monuments of the ancient population of Ohio, consist of fortifications, and mounds or embankments, of various forms and dimensions. Amongst them all, there is not a single edifice, nor any ruins, which prove the existence, in former ages, of a building composed of durable materials; no fragment of a column, no brick, nor a single hewn stone, large enough to have been incorporated into a wall, has been discovered. Many ancient fortifications are found, generally in the valleys of streams, and on the most elevated plains. There have been many and various conjectures concerning the time when these monuments were erected, the people by whom they were built, and the design of their erection. Those which we call forts, are generally in the strongest military position of the country, and were, perhaps, without exception, designed for defence in time of war. The mounds, no doubt, were burying places, as human bones have been frequently discovered in them.

The **CHIEF TOWNS** are Cincinnati, Chillicothe, Zanesville, Columbus, Steubenville, Marietta, Cleveland, and Dayton, besides a large number of rapidly increasing villages. Cincinnati is the largest, but Columbus is the capital of the state. Columbus is regularly laid out, on a pleasant rising ground, on the east side of Scioto River, just below the confluence of the Whetstone. The growth of this place has been very rapid. In 1812, the lots were first sold, with the trees standing thereon. It now contains a handsome state house, a building for public offices, penitentiary, bank, market house, four printing offices and about 2,000 inhabitants.

INDIANA.

The state of Indiana is bounded north by the state of Illinois, Lake Michigan, and Michigan Territory; east by the state of Ohio; south by Kentucky; and west by Illinois. It extends from $37^{\circ} 45'$ to $41^{\circ} 50'$ north lat., and from $85^{\circ} 42'$ to $87^{\circ} 49'$ west long., and is estimated to contain 36,000 square miles.

RIVERS.—The *Ohio* River forms the southern boundary of the state, from the mouth of the Great Miami to that of the Wabash. The Wabash rises in the north-eastern part of the state, flows in a southwest direction, and falls into the Ohio River, 30 miles above the mouth of Cumberland River, after a course of 500 miles, the last 250 of which forms the boundary between Indiana and Illinois. It is navigable for keel boats 400 miles, to Cuitanon, where there are rapids. Above the rapids, small boats can ascend nearly to its source. The current is gentle above Vincennes; below the town there are several rapids, but none of sufficient magnitude to prevent boats from descending. Its principal tributaries are the White River and Tippecanoe. The White River rises in the eastern part of the state, runs in a southwesterly direction, through nearly the whole breadth of the state, parallel with the Ohio River, and at the distance of from 40 to 60 miles, empties itself into the Wabash, 16 miles below Vincennes.

The *Tippecanoe* River rises in the northern part of the state, runs in a southerly direction, and joins the Wabash, 140 miles above Vincennes. The banks of this river are celebrated for a severe battle, fought in November, 1811, between the United States' troops and the Indians, in which the former were victorious. *White Water* rises in this state, runs in a southeasterly direction, receives a number of tributaries, and falls into the Miami, in Ohio, five miles above the junction of that with the Ohio River. It is a beautiful transparent stream, and abounds with fine seats for mills, many of which are already erected upon it; it can easily be made navigable to Brookville, 20 miles from its mouth. *St. Mary's* River rises in the state of Ohio, near the sources of the Miami,

runs in a direction west of north, for 70 miles, and joins the St. Joseph's River, at Fort Wayne, from whence it is called the Maumee. It is navigable for boats nearly to its source, from which there is only a short portage to Loramie's Creek, a branch of the Miami.

Face of the Country.—A ridge of hills commences near the mouth of the Wabash, and runs in a northeasterly direction, nearly parallel with the Ohio, at no great distance, producing a broken and uneven country. North of these hills lies a considerable tract of wilderness. Bordering on all the principal streams, except the Ohio, there are strips of cotton and prairie land, of a rich soil, and from three to six miles in width. The prairie on the Wabash is the finest land in the state. Remote from the rivers, the country is broken and the soil light. Between the Wabash and Lake Michigan, the land is level, and interspersed with woodlands, prairies, lakes, and swamps.

The principal productions are wheat, Indian corn, oats, rye, flax, hemp, potatoes and tobacco. In the southeastern part of the state, near Vevay, on the Ohio, the vine is cultivated with success. On the banks of the Wabash, in the upper part of its course, the best kind of coal is found in inexhaustible quantities; and near the sources of several of the navigable rivers, there are salt springs, from which an abundance of salt may be procured. Near Coryden, in the southern part of the state, is a large cave, abounding with Epsom salts and saltpetre. The north part of the state, called the St. Joseph's country, is fertile and excellent land. A large number of emigrants flocked thither from Ohio and the eastern states, in the years 1828, 1829, and 1830. The emigration to the whole of this state has been very great, particularly during the last two years.

GOVERNMENT.—In 1763, this territory was ceded by France to England. By the treaty of Greenville, in 1795, the United States obtained several grants of land within this territory; and in subsequent years, still more extensive tracts. During the wars which began in 1812, this territory was the source of many Indian depredations, and of many unusually severe battles between the hostile savages and the troops of the United States. In

diana formed a part of the Northwest Territory, until the year 1801, when it was set off as a separate district, and granted the usual privileges. In 1816, it was admitted into the Union as an independent state. The legislative power is vested in a general assembly, consisting of a senate and house of representatives. The representatives are chosen annually, and the senators for three years. The executive power is vested in a governor, who is chosen by the people for three years. The judiciary power is vested in a supreme court, and such inferior courts as the general assembly may, from time to time, direct and establish. The judges of the supreme court are appointed by the governor, with the advice of the senate. The judges of the inferior courts are chosen partly by the people in their respective counties, and partly by the general assembly. The justices of the peace are elected by the people, in their respective towns, and hold their office for five years. The judges of all the courts hold their office for seven years, unless impeached for bad conduct.

CHIEF TOWNS.—Indianapolis, the capital of the state, is handsomely situated on the east bank of White River. It was laid out in 1821, and contained over forty dwellings within six months. Vincennes, a large town, situated on the east bank of the Wabash, 100 miles from its junction with the Ohio in a direct line, and nearly 200 by the course of the river. This town was first settled by the French, of rather a low class; soon after, large numbers of emigrants went thither from different parts of the United States, which greatly improved the society. The population in 1810, was 883; in 1820, it contained nearly three hundred dwellings, and the number has continued to increase since that period. The population of this state, in 1819, was 68,784, and in 1820, 147,178, having considerably more than doubled in five years. The Indian title to a large tract of excellent land, was purchased by the United States some years since, and the number of emigrants are, in consequence, rapidly increasing. Pop. in 1840, 685,866.

ILLINOIS.

The state of Illinois is bounded north by the Northwest Territory, east by Indiana and Lake Michigan, west by the Mississippi River, which divides it from the state of Missouri and Missouri Territory.

Rivers.—This state is well provided with navigable rivers. It is bounded on three sides by the Mississippi, Ohio, and Wabash; its northeast corner also touches upon Lake Michigan. The Illinois River, which rises in the northeast part of the state, runs in a southwest direction about 400 miles, and falls into the Mississippi, eighteen miles above the mouth of the Missouri. It has a gentle current, and is navigable nearly to its source. The Illinois has several tributaries, which are navigable about 100 miles. The Kaskaskia River rises in the eastern part of the state, runs 150 miles in a southwesterly direction, and falls into the Mississippi, eighty-four miles below the Illinois; one hundred and thirty miles of this river is navigable. Besides these, it has a large number of streams of ordinary size, viz. *Rocky River, Aubase, Saline River, Little Wabash*, and the *Chicago*; many of these are navigable for boats for a considerable distance, and afford many mill sites, which are of great benefit to the country.

FACE OF THE COUNTRY.—The land may be called flat, although there are many parts which has a gentle rise and descent. Extensive prairies are found to cover a considerable portion of this state. On the banks of the principal rivers may be found land of the first quality, bearing a heavy growth of timber. It varies in width from 50 rods to three miles. There are many thousands of acres of newly formed land at the mouths of the principal rivers; but it is very unhealthy, being subject to annual inundation. There are dry prairies near the rivers bordering on the bottoms, but they are elevated about 70 or 80 feet. No prairies east of the Mississippi are more extensive than those in this state: it has been estimated at 1,200,000 acres; the soil is not inferior to the river bottoms. Some prairies of a different nature are found remote from the rivers, but near their sources: the soil is wet, abounding with swamps and ponds, and covered with

coarse grass. The timbered land is moderately hilly, well watered, and of a rich soil. Corn is at present the staple production. Wheat does well, except on the bottoms where the soil is too rich; this, however, is a fault, if it can be called so, which time will overcome. Tobacco grows to perfection; flax, hemp, oats, common and sweet potatoes, do very well in this state. Several millions of acres of excellent land belong to the United States, part of which has been awarded to the soldiers who served in the last war.

GOVERNMENT.—This state was first settled by the French, as early as 1780. No English settlement was commenced for a considerable time. After Colonel Clark subdued the Indians in these parts, the settlers felt more secure, and their numbers increased. It constituted a part of the Northwest Territory until 1800, when it was set off as a separate territory. It was admitted into the union, with all the privileges of her sister states, in 1818. The convention which formed the constitution of the state, was required to provide, by ordinance, which is irrevocable without the consent of congress, that all lands sold by the United States, shall be exempted from every species of taxation for five years from the day of sale: also, that the county lands, granted for military services during the late war, shall, if they continue to be held by the patentees, or their heirs, remain exempt from taxes for three years from the date of the patents; and that the lands belonging to citizens of the United States, residing without the state, shall never be taxed higher than lands belonging to persons residing within the state. Similar provisions are required of all new states, as the condition on which they receive their grants of land and money for the support of schools and roads. It is usually required that all navigable waters shall be common highways, and for ever free of toll or duty to all citizens of the United States.

POPULATION.—The population has increased very rapidly within a few years. The first settlements were principally confined to the banks of the Mississippi, and other principal rivers. The population, in 1810, was 12,282; in 1818, 35,220. and in 1820, 55,512, having increased nearly five to one in ten years; large numbers

emigrated to this state in 1829 and 1830, particularly along the banks of the Mississippi. Pop. in 1840, 476,483.

SPRINGFIELD, the seat of government, is situated near the centre of the state. It was laid out in 1822, and in 1823, contained only thirty families, living in log houses. It contains a state-house, a court-house, a jail, and a market house, and a fine public square. The principal growth has been since 1830. Pop. in 1840, 2,579.

MINERALS.—Copper and lead are found in some parts of the state. Coal has been discovered on the banks of Aubase River; on the Illinois, 260 miles from its mouth, and in several places near Kaskaskia and Edwardsville; salt is manufactured to a considerable extent, sufficient to supply this state, and Indiana.

MISSOURI.

This state is bounded north by Missouri Territory, south by Arkansas Territory, east by Kentucky, Illinois, and Tennessee, and west by Missouri Territory.

RIVERS.—The Mississippi washes the eastern line of the state. The Missouri crosses the western boundary, runs in an eastern direction through the heart of the state, and discharges itself into the Mississippi 18 miles below the mouth of the Illinois, and 193 above that of the Ohio. The principal tributaries of the Mississippi are the Salt River, Missouri, and Merrimack. The principal tributaries of the Missouri are the Gasconade, Osage, and Grana. The *Gasconade* River enters the Missouri after a northerly course of 200 miles, about 100 miles from its confluence with the Mississippi. The current is rapid, and affords many good mill seats; boats and rafts may descend with ease, but the ascent is accomplished with great labour. The *Osage* River rises in Missouri, runs in an east and northeast direction, and enters the Missouri 133 miles from its confluence with the Mississippi. The *Grand* River rises in Missouri Territory, and, after running in a southeasterly direction, joins the Missouri 100 miles above the mouth of the Osage.

In 1663, the French commenced some small settlements in this state, and in 1664, St. Louis was began by

hem. It was ceded to the United States in 1803. Very little progress was made previous to the cession; but soon after this, numerous settlements, that had been commenced by the French, began to flourish, and to be thickly peopled. The people made application to congress, in 1818, to form a state constitution; the bill passed the house of representatives, but was refused by the senate; the bill was again renewed the next session; it was the subject of considerable debate, and was finally carried by a small majority on the following conditions: That they should not be authorized to pass any laws excluding any citizen of the state from enjoying the privileges to which they are entitled by the constitution of the United States. On the 24th of June, 1824, the legislature of Missouri assented to the fundamental conditions, and, on the 10th of August following, the president declared its admission into the Union as an independent state.

FACE OF THE COUNTRY.—The lands on the banks of the rivers are mostly level, but as you recede from them, towards the interior, the country rises, sometimes gradually and sometimes abruptly, into elevated barrens, flinty ridges, and rocky cliffs. Some portion of the state is unfit for cultivation, but is rich in mineral treasures. The highest land is in a ridge which commences on the banks of the Merrimack, and extends in a southwest direction to the banks of the White River, in Arkansas Territory, a distance of 400 miles; this occasionally rises into mountainous peaks.

Soil.—The soil is either very rich or very poor; it is either bottom land or cliff, either prairie or barren; there is very little of an intermediate quality. The lands immediately upon the banks of the rivers are generally rich, producing corn, wheat, oats, flax, hemp, and tobacco, in great abundance. The lands bordering on the Missouri, are very rich. They consist of a stratum of black alluvial soil, of unknown depth, partaking largely of the properties of marl, and covered with a heavy growth of forest trees. Osage River affords, in its whole length, large bodies of the choicest prairie land, interspersed with wood land, and occasionally with hills. Its banks have also abundance of coal. The lands bordering on Salt River

are noted for their fertility; and the settlements on its banks are rapidly progressing. Some very good land is found near the St. Francis River.

CLIMATE.—The state of Missouri enjoys a climate of remarkable serenity and temperate warmth. It is exempt from the warm summers of the south, and the chilling blasts of the north; it has a medium of climate, which is calculated to favour the pursuits of agriculture, commerce, and navigation. A clear blue sky is characteristic of the country, and an atmosphere of unusual dryness exempts the inhabitants from those pulmonary complaints which are so frequent in some of the Atlantic states. The climate is favourable for the production of corn, wheat, rye, oats, flax, and hemp; the lands on the banks of the Missouri are famed for vigorous crops. Tobacco is found to succeed as well as in Virginia or Kentucky. The soil and climate are also adapted to the growth of sweet potatoes, and fruit trees of various kinds. The luxuriant growth of grass in the woods afford ample range for horses and cattle, and they are constantly kept fat. There is, perhaps, no country in the world, where cattle, hogs, and other stock, can be raised with so little trouble as in some parts of this state.

MINERALS.—The most remarkable features in this state are the lead mines; these are probably the most extensive on the globe; they extend about 70 miles in length and 40 in width. They comprise a large portion of Washington, Genevieve, Jefferson, and Madison counties, covering about 3000 square miles. The ore is of the best and purest kind; more than a thousand men are employed in the mines.

Antiquities.—Several skeletons were discovered, in 1818, on the banks of the Merrimack River, which indicate a stature unusually small, and are supposed by many to be an extinct race of human beings, of dwarfish origin, who inhabited this country at a former period. None of the graves exceed four feet in length; the teeth of the skeleton indicates that they had arrived to the age of maturity.

COMMERCE.—The exports are lead, shot, whiskey, flour, corn, hemp, flax, tow cloth, and furs; large droves of

horses are annually taken to Kentucky and other states ; commerce is chiefly carried on with the cities of New York, Philadelphia, and New-Orleans.

POPULATION.—The population of this state in 1810, was 20,657 ; in 1820, exclusive of Indians, 66,586 ; a large proportion annually emigrate from New-York, Tennessee, Kentucky, and New-England. The population has continued to increase very rapidly within a few years. Large numbers flocked to St. Louis in 1829 and 1830. St. Louis is very handsomely laid out on the west side of the Mississippi, 18 miles below the mouth of the Missouri, and 200 above the mouth of the Ohio ; it is well situated for commerce, and bids fair to become a place of considerable importance. The course of emigration has been, and still is, through the Mississippi River to this state. The principal settlements have heretofore been made on the banks of the Mississippi and Missouri Rivers. Emigrants are now extending back from the rivers, and, no doubt, will soon cultivate the whole of this rich and fertile country. Pop. in 1840, 383,702.

MICHIGAN.

This state is bounded north by Lake Superior, east by Lakes Huron, St. Clair, and Erie, south by Ohio and Indiana, and west by the Northwest Territory. The part of the territory to which the Indian title has been extinguished, is a tract in the southern portion, along the banks of Lake Erie, Lake St. Clair, and Lake Huron. Lake Michigan lies wholly within this territory. It is 260 miles long, and 800 in circumference, containing about 16,200 square miles. This lake is navigable for ships of any burthen. Green Bay extends in a southwest direction 90 miles, and is about 20 wide ; it is navigable for vessels of 200 tons. *Lake Huron* lies partly in this territory and partly in Upper Canada. On its northwest side it receives the waters of Lake Superior through the River St. Mary's, and is connected with Lake Michigan by the straits of Michilimackinack. It discharges itself at its southern extremity, through St. Clair River, into Lake St. Clair.

RIVERS.—St. Mary's River, or strait, which connects

Lake Superior with **Lake Huron**, is about 80 miles long. The fall, or *Saut de St. Marie*, is near the head of the strait, fifteen miles from **Lake Superior**; the river here descends twenty-two feet and ten inches, in 900 yards, and cannot be ascended with large vessels; canoes and other small craft are towed up, with considerable difficulty. Large quantities of white fish are taken at the foot of these rapids; they are so numerous that 500 have been taken in two hours by one person. The principal rivers which discharge themselves from the eastern shore of the territory, are *Saganaw*, *Huron*, and *Raisin*. The *Saganaw* is a large and deep stream, which falls into *Saganaw Bay*, at its southern extremity. The *Huron River* discharges itself into **Lake St. Clair**, twenty miles north of **Detroit**, after an easterly course of 60 miles. Numerous rivers fall into **Lake Michigan**, on its eastern shore; the most noted of which is the *St. Joseph*, which rises in **Indiana**, near the source of the *Maumee*, and running in a northwestern direction, falls into the lake near its southern extremity. *Grand River* rises near the sources of the *Saganaw* and the *Raisin*, and runs in a westerly direction, until it falls into the lake, about 60 miles north of the *St. Joseph's*; it is navigable for boats nearly to its source.

Face of the Country.—A ridge of high land divides the waters flowing into **Lake Michigan**, from those which fall into **Lake Huron**, **St. Clair**, and **Erie**. The country along the eastern shore of **Lake Michigan**, and extending into the interior as far as the dividing ridge, consists of sand hills, sometimes covered with a few stunted trees, and scanty vegetation, but generally bare, and thrown by the wind into a thousand fantastic shapes. The whole of this tract has been gained from the lake, and the land is still continually making encroachments, every storm throwing up new quantities of alluvial. The eastern part of the state consists of lands ceded by the Indians, but never has, until recently, been brought into notice. It is now ascertained to be a fertile region, well fitted for wheat and fruit of all kinds, generally level, and watered by fine rivers, most of which present facilities for the transportation of produce from the interior. Since the

lands were offered for sale by the United States' government, in 1818, emigrants have flocked to this state in great numbers; and, perhaps, in no country north of the cotton and sugar climate, could the farmer find a better field for enterprise, or a surer prospect of reward. The lands on Saganaw river and bay, which were ceded by the Indians, in 1819, are represented to be of excellent quality, and beautifully situated.

CLIMATE.—The climate is healthful, and milder than in the Atlantic states in the same latitude. In the eastern parts it resembles that of the western part of New-York and Pennsylvania; towards the southern boundary it increases in mildness, but upon the coast of Lake Huron and St. Clair it is more severe. No part of the country is better supplied with fish and other wild game; the trout of Michilimackinack have a superior relish; they weigh from 10 to 70 pounds each, and are taken at all seasons of the year. White fish are caught in abundance in the straits of St. Mary, the River Detroit, and Lake St. Clair. Sturgeon are commonly caught in all the lakes. The beaver frequent the rivers running into Lake Michigan. Bears, wolves, elk, deer, and foxes, are also found in the forests.

The territory, when first discovered by the whites, was inhabited by a tribe of Indians called Hurons. This tribe was dispersed by the Six Nations, and the French began small settlements about the year 1670; they built a fort at Detroit and Michilimackinack, for the protection of the fur trade. In 1763 the territory was ceded to Great Britain, and by the latter to the United States, in 1783. No improvement or settlement of any account was commenced until 1787. It was detached from the Northwest Territory in 1805, and erected into a territorial government, and General Hull appointed first governor. During the late war, Detroit and Michilimackinack fell into the hands of the British, but were restored on the return of peace.

COMMERCE.—The territory is finely situated for commerce, being almost surrounded by navigable waters, which will soon be connected with the Mississippi on one side by canals, and is already connected with the Atlantic

Andrew Jackson.

Martin Van Buren.

Ocean on the other. The vessels which navigate the lakes are from 10 to 100 tons burthen. The merchants supply themselves mostly from New-York. Goods are transported through the Erie canal to Buffalo, and thence to Detroit by steamboat, or other lake conveyance. The navigation has greatly increased on Lake Erie within a few years; six steamboats navigate this lake; they formed a daily line, in the spring of 1830, from Buffalo to Detroit. Large numbers of emigrants passed Buffalo N. Y., on their way to this territory, in the spring of 1830. Many were leaving the states of Ohio, Pennsylvania, and other parts of the Union, for the St. Joseph's country, so called, more particularly than for any other section of this state.

POPULATION.—The population, exclusive of Indians, in 1810, was 4,762, in 1820, 8,896, in 1830, 32,538, and in 1840, 212,276. The population has very greatly increased since the last census was taken. The settlements are principally in the southeast part, on Lake Erie, the River Detroit, Lake St. Clair, and the runs which fall into them, particularly the Maumee, Raisin, and Huron. Detroit, the capital of the territory, is regularly laid out on the west bank of Detroit River, nine miles from Lake St. Clair. It is finely situated for commerce, and was first settled by the French from Canada.

CHAPTER XIX.

President Jackson's Administration.

Congress assembled December, 1829. The president's message was communicated to both houses on the eighth. We make a few extracts from the same.

"It affords me pleasure to tender my friendly greetings to you, on the occasion of your assembling at the seat of government to enter upon the important duties to which you have been called by the voice of our countrymen. The task devolves on me, under a provision of the constitution, to present to you, as the federal legislature of

twenty-four sovereign states, and twelve millions of happy people, a view of your affairs, and to propose such measures as, in the discharge of my official functions, have suggested themselves as necessary to promote the objects of our Union.

“In communicating with you for the first time, it is, to me, a source of unfeigned satisfaction, calling for mutual gratulation, and devout thanks to a benign Providence, that we are at peace with all mankind, and that our country exhibits the most cheering evidence of general welfare, and progressive improvement. Turning our eyes to other nations, our great desire is to see our brethren of the human race secured in the blessings enjoyed by ourselves, and advancing in knowledge, in freedom, and in social happiness.

“Our foreign relations, although in their general character pacific and friendly, present subjects of difference between us and other powers, of deep interest, as well to the country at large, as to many of our citizens. To effect an adjustment of these shall continue to be the object of my earnest endeavours; and, notwithstanding the difficulties of the task, I do not allow myself to apprehend unfavourable results. Blessed as our country is with every thing that constitutes national strength, she is fully adequate to the maintenance of all her interests. In discharging the responsible trust confided to the executive in this respect, it is my settled purpose to ask nothing that is not clearly right, and to submit to nothing that is wrong, and I flatter myself that, supported by the other branches of the government, and by the intelligence and patriotism of the people, we shall be able, under the protection of Providence, to cause all our just rights to be respected.

“Of the unsettled matters between the United States and other powers, the most prominent are those which have, for years, been the subject of negotiation with England, France, and Spain. The late periods at which our ministers to those governments left the United States, render it impossible, at this early day, to inform you of what has been done on the subjects with which they have been respectively charged. Relying upon the justice of our views in relation to the points committed to negotiation, and the

reciprocal good feeling which characterizes our intercourse with those nations, we have the best reason to hope for a satisfactory adjustment of existing differences.

“With Great Britain, alike distinguished in peace and war, we may look forward to years of peaceful, honourable, and elevated competition. Every thing in the condition and history of the two nations is calculated to inspire sentiments of mutual respect, and to carry conviction to the minds of both, that it is their policy to preserve the most cordial relations. Such are my own views, and it is not to be doubted that such are also the prevailing sentiments of our constituents. Although neither time nor opportunity has been afforded for a full developement of the policy which the present cabinet of Great Britain designs to pursue towards this country, I indulge the hope that it will be of a just and pacific character; and if this anticipation be realized, we may look with confidence to a speedy and acceptable adjustment of our affairs.

“With other European powers our intercourse is on the most friendly footing. In Russia, placed by her territorial limits, extensive population, and great power, high in the rank of nations, the United States have always found a steadfast friend. Although her recent invasion of Turkey awakened a lively sympathy for those who were exposed to the desolations of war, we cannot but anticipate that the result will prove favourable to the cause of civilization, and to the progress of human happiness. The treaty of peace between these powers having been ratified, we cannot be insensible to the great benefit to be derived to the commerce of the United States, from unlocking the navigation of the Black Sea—a free passage into which is secured to all merchant vessels bound to ports of Russia, under a flag at peace with the Porte. This advantage, enjoyed upon conditions by most of the powers of Europe, has hitherto been withheld from us. During the past summer, an antecedent, but unsuccessful attempt to obtain it, was renewed, under circumstances which promised the most favourable results. Although these results have fortunately been thus in part attained, farther facilities to the enjoyment of this new field for the enterprise of our citizens, are, in my opinion, sufficiently desirable to ensure to them our most zealous attention.

“Our trade with Russia, although of secondary importance, has been gradually increasing, and is now so extended as to deserve the fostering care of the government. A negotiation, commenced, and nearly completed with that power, by the late administration, has been consummated by a treaty of amity, navigation, and commerce, which will be laid before the senate.

“Measures have been taken to place our commercial relations with Peru upon a better footing than that upon which they have hitherto rested, and if met by a proper disposition on the part of that government, important benefits may be secured to both countries.”

In relation to the amendment of the constitution, respecting the election of president and vice-president, he thus speaks :

“I would therefore recommend such an amendment of the constitution as may remove all intermediate agency in the election of president and vice-president. The mode may be so regulated as to preserve to each state its present relative weight in the election ; and a failure in the first attempt may be provided for, by confining the second to a choice between the two highest candidates. In connection with such an amendment, it would seem advisable to limit the service of the chief magistrate to a single term, of either four or six years. If, however, it should not be adopted, it is worthy a consideration whether a provision disqualifying for office the representatives in congress, on whom such an election may have devolved, would not be proper.

“While members of congress can be constitutionally appointed to offices of trust and profit, it will be the practice, even under the most conscientious adherence to duty, to select them for such stations as they are believed to be better qualified to fill than other citizens ; but the purity of our government would doubtless be promoted by their exclusion from all appointments in the gift of the president in whose election they may have been officially concerned. The nature of the judicial office, and the necessity of securing in the cabinet, and in diplomatic stations of the highest rank, the best talents and political experience, should, perhaps, except these from the exclusion.

There are, perhaps, few men who can, for any great length of time, enjoy office and power, without being more or less under the influence of feelings unfavourable to a faithful discharge of their public duties. Their integrity may be proof against improper considerations immediately addressed to themselves, but they are apt to acquire a habit of looking with indifference upon the public interests, and of tolerating conduct from which an unpractised man would revolt. Office is considered as a species of property; and government, rather as a means of promoting individual interests, than as an instrument created solely for the service of the people. Corruption in some, and in others a perversion of correct feelings and principles, divert government from its legitimate ends, and make it an engine for the support of the few at the expense of the many. The duties of all public officers are, or, at least, admit of being made so plain and simple, that men of intelligence may readily qualify themselves for their performance; and I cannot but believe that more is lost by the long continuance of men in office than is generally to be gained by their experience. I submit, therefore, to your consideration, whether the efficiency of the government would not be promoted, and official industry and integrity better secured, by a general extension of the law which limits appointments to four years.

“In a country where offices are created solely for the benefit of the people, no one man has any more intrinsic right to official station than another. Offices were not established to give support to particular men at the public expense. No individual wrong is therefore done by removal, since neither appointment to, nor continuance in office, is matter of right. The incumbent became an officer with a view to public benefits; when these require his removal, they are not to be sacrificed to private interests. It is the people, and they alone, who have a right to complain, when a bad officer is substituted for a good one. He who is removed has the same means of obtaining a living that are enjoyed by the millions who never held office. The proposed limitation would destroy the idea of property, now so generally connected with official station; and although individual distress may be some-

times produced, it would, by promoting that rotation which constitutes a leading principle in the republican creed, give healthful action to the system.

“No very considerable change has occurred during the recess of congress, in the condition of either our agriculture, commerce, or manufactures. The operation of the tariff has not proved so injurious to the two former, nor as beneficial to the latter, as was anticipated. Importations of foreign goods have not been sensibly diminished; while domestic competition, under an illusive excitement, has increased the production much beyond the demand for home consumption. The consequences have been, low prices, temporary embarrassments, and partial loss. That such of our manufacturing establishments as are based upon capital, and are prudently managed, will survive the shock, and be ultimately profitable, there is no good reason to doubt.

“To regulate its conduct, so as to promote equally the prosperity of these three cardinal interests, is one of the most difficult tasks of government; and it may be regretted that the complicated restrictions which now embarrass the intercourse of nations, could not, by common consent, be abolished, and commerce allowed to flow in those channels, to which individual enterprise, always its surest guide, might direct. But we must ever expect selfish legislation in other nations, and are therefore compelled to adapt our own to their regulations, in the manner best calculated to avoid serious injury, and to harmonize the conflicting interests of our agriculture, our commerce, and our manufactures. Under these impressions, I invite your attention to the existing tariff, believing that some of its provisions require modification.

“The general rule to be applied in graduating the duties upon articles of foreign growth or manufacture, is that which will place our own in fair competition with those of other countries; and the inducements to advance even a step beyond this point, are controlling in regard to those articles which are of primary necessity in time of war. When we reflect upon the difficulty and delicacy of this operation, it is important that it should never be attempted but with the utmost caution. Frequent legislation, in

regard to any branch of industry, affecting its value, and by which its capital may be transferred to new channels, must always be productive of hazardous speculation and loss.

“In deliberating, therefore, on these interesting subjects, local feelings and prejudices should be merged in the patriotic determination to promote the great interests of the whole. All attempts to connect them with the party conflicts of the day, are necessarily injurious, and should be discountenanced. Our action upon them should be under the control of higher and purer motives. Legislation, subjected to such influences, can never be just, and will not long retain the sanction of a people, whose active patriotism is not bounded by sectional limits, nor insensible to that spirit of concession and forbearance, which gave life to our political compact, and still sustains it. Discarding all calculations of political ascendancy, the north, the south, the east, and the west, should unite in diminishing any burthen, of which either may justly complain.

“The agricultural interest of our country is so essentially connected with every other, and so superior in importance to them all, that it is scarcely necessary to invite to it your particular attention. It is principally as manufactures and commerce tend to increase the value of agricultural productions, and to extend their application to the wants and comfort of society, that they deserve the fostering care of government.

“Looking forward to the period, not far distant, when a sinking fund will no longer be required, the duties on those articles of importation which cannot come in competition with our own productions, are the first that should engage the attention of congress in the modification of the tariff. Of these, tea and coffee are the most prominent; they enter largely into the consumption of the country, and have become articles of necessity to all classes. A reduction, therefore, of the existing duties, will be felt as a common benefit; but, like all other legislation connected with commerce, to be efficacious, and not injurious, it should be gradual and certain.

“The public prosperity is evinced in the increased re-

venue arising from the sales of public lands, and in the steady maintenance of that produced by imposts and tonnage, notwithstanding the additional duties imposed by the act of 19th of May, 1828, and the unusual importation in the early part of that year.

The balance in the treasury on the 1st of January, 1829, was five millions nine hundred and seventy-two thousand four hundred and thirty-five dollars and eighty-one cents. The receipts of the current year are estimated at twenty four millions six hundred and two thousand two hundred and thirty dollars; and the expenditures for the same time at twenty-six millions one hundred and sixty-four thousand five hundred and ninety-five dollars; leaving a balance in the treasury on the 1st of January next, of four millions four hundred and ten thousand and seventy dollars and eighty-one cents.

“There will have been paid, on account of the public debt, during the present year, the sum of twelve millions four hundred and five thousand and five dollars and eighty cents; reducing the whole debt of the government, on the 1st of January next, to forty-eight millions five hundred and sixty-five thousand four hundred and six dollars and fifty cents, including seven millions of five per cent. stock, subscribed to the bank of the United States.—The payment on account of the public debt, made on the first of July last, was eight millions seven hundred and fifteen thousand four hundred and sixty-two dollars and eighty-seven cents. It was apprehended that the sudden withdrawal of so large a sum from the banks in which it was deposited, at a time of unusual pressure in the money market, might cause much injury to the interest dependant on bank accommodations. But this evil was wholly averted by an early anticipation of it at the treasury, aided by the judicious arrangements of the bank of the United States.

“This state of the finances exhibits the resources of the nation in an aspect highly flattering to its industry, and auspicious of the ability of the government, in a very short time, to extinguish the public debt. When this shall be done, our population will be relieved from a considerable portion of its present burthens;—and will find, not only

new motives to patriotic affection, but additional means for the display of individual enterprise. The fiscal power of the states will also be increased, and may be more extensively exerted in favour of education and other public objects; while ample means will remain in the federal government to promote the general weal, in all the modes permitted to its authority.

“After the extinction of the public debt, it is not probable that any adjustment of the tariff, upon principles satisfactory to the people of the Union, will, until a remote period, if ever, leave the government without a considerable surplus in the treasury, beyond what may be required for its current service. As then the period approaches when the application of the revenue to the payment of debt will cease, the disposition of the surplus will present a subject for the serious deliberation of congress; and it may be fortunate for the country that it is yet to be decided. Considered in connexion with the difficulties which have heretofore attended appropriations for purposes of internal improvement, and with those which this experience tell us will certainly arise, whenever power over such subjects may be exercised by the general government, it is hoped that it may lead to the adoption of some plan which will reconcile the diversified interests of the states, and strengthen the bonds which unite them. Every member of the Union, in peace and in war, will be benefitted by the improvement of inland navigation and the construction of highways in the several states.—Let us then endeavour to attain this benefit in a mode which will be satisfactory to all. That hitherto adopted has, by many of our fellow citizens, been deprecated as an infraction of the constitution, while by others, it has been viewed as inexpedient. All feel that it has been employed at the expense of harmony in legislative councils.

“The condition, and ulterior destiny of the Indian tribes within the limits of some of our states, have become objects of much interest and importance. It has long been the policy of government to introduce among them the arts of civilization, in the hope of gradually reclaiming them from a wandering life. This policy has, however, been coupled with another, wholly incompatible with its

success. Professing a desire to civilize and settle them we have, at the same time, lost no opportunity to purchase their lands, and thrust them farther into the wilderness. By this means they have not only been kept in a wandering state, but been led to look upon us as unjust, and indifferent to their fate. Thus, though lavish in its expenditures upon the subject, government has constantly defeated its own policy; and the Indians, in general, receding farther to the west, have retained their savage habits. A portion, however, of the southern tribes having mingled much with the whites, and made some progress in the arts of civilized life, have lately attempted to erect an independent government within the limits of Georgia and Alabama. These states, claiming to be the only sovereigns within their territories, extend their laws over the Indians, which induced the latter to call upon the United States for protection.

“Under these circumstances, the question presented was, whether the general government had a right to sustain those people in their pretensions? The constitution declares, that ‘no new state shall be formed or erected within the jurisdiction of any other state,’ without the consent of its legislature. If the general government is not permitted to tolerate the erection of a confederate state within the territory of one of the members of this Union, against her consent, much less could it allow a foreign and independent government to establish itself there. Georgia became a member of the confederacy which eventuated in our federal union, as a sovereign state, always asserting her claim to certain limits; which having been originally defined in her colonial charter, and subsequently recognised in the treaty of peace, she has ever since continued to enjoy, except as they have been circumscribed by her own voluntary transfer of a portion of her territory to the United States, in the articles of cession of 1802. Alabama was admitted into the Union on the same footing with the original states, with boundaries which were prescribed by congress. There is no constitutional, conventional, or legal provision, which allows them less power over the Indians within their border, than is possessed by Maine or New-York

Would the people of Maine permit the Penobscot tribe to erect an independent government within their state: and, unless they did, would it not be the duty of the general government to support them in resisting such a measure? Would the people of New-York permit each remnant of the Six Nations within her borders, to declare itself an independent people, under the protection of the United States? Could the Indians establish a separate republic on each of their reservations in Ohio? And if they were so disposed, would it be the duty of this government to protect them in the attempt? If the principle involved in the obvious answer to these questions be abandoned, it will follow, that the objects of this government are reversed, and that it has become a part of its duty to aid in destroying the states which it was established to protect.

“Actuated by this view of the subject, I informed the Indians inhabiting parts of Georgia and Alabama that their attempt to establish an independent government would not be countenanced by the Executive of the United States, and advised them to emigrate beyond the Mississippi, or submit to the laws of those states.

“Our conduct towards these people is deeply interesting to our national character.—Their present condition, contrasted with what they once were, makes a most powerful appeal to our sympathies. Our ancestors found them the uncontrolled possessors of these vast regions. By persuasion and force, they have been made to retire from river to river, and from mountain to mountain, until some of the tribes have become extinct, and others have left but remnants to preserve, for a while, their once terrible names. Surrounded by the whites, with their arts of civilization, which, by destroying the resources of the savage, doom him to weakness and decay, the fate of the Mohegan, the Narragansett, and the Delaware, is fast overtaking the Choctaw, the Cherokee, and the Creek. That this fate surely awaits them, if they remain within the limits of the states, does not admit of a doubt.—Humanity and national honour demand that every effort should be made to avert so great a calamity. It is too late to inquire whether it was just in the United States to include

them and their territory within the bounds of new states whose limits they could control. That step cannot be retraced. A state cannot be dismembered by congress, or restricted in the exercise of her constitutional power. But the people of these states, and of every state actuated by feelings of justice and regard for our national honour, submit to you the interesting question, whether something cannot be done, consistently with the rights of the states, to preserve this much injured race?

“As a means for effecting this end, I suggest for your consideration, the propriety of setting apart an ample district west of the Mississippi, and without the limits of any state or territory, now formed, to be guaranteed to the Indian tribes, as long as they shall occupy it: each tribe having a distinct control over the portion designated for its use.—There they may be secured in the enjoyment of governments of their own choice, subject to no other control from the United States, than such as may be necessary to preserve peace on the frontier, and between the several tribes. There the benevolent may endeavour to teach them the arts of civilization; and by promoting union and harmony among them, to raise up an interesting commonwealth, destined to perpetuate the race, and to attest the humanity and justice of this government.

“This emigration should be voluntary; for it would be as cruel as unjust to compel the aborigines to abandon the graves of their fathers, and seek a home in a distant land. But they should be distinctly informed, that if they remain within the limits of the states, they must be subject to their laws. In return for their obedience, as individuals, they will, without doubt, be protected in the enjoyment of those possessions which they have improved by their industry. But it seems to me visionary to suppose, that, in this state of things, claims can be allowed on tracts of country on which they have neither dwelt nor made improvements, merely because they have seen them from the mountain, or passed them in the chase. Submitting to the laws of the states, and receiving, like other citizens, protection in their persons and property, they will, ere long, become merged in the mass of our population.”

“I cannot close this communication without bringing

so your view the just claim of the representatives of Commodore Decatur, his officers and crew, arising from the recapture of the frigate Philadelphia, under the heavy batteries of Tripoli. Although sensible, as a general rule, of the impropriety of executive interference under a government like ours, where every individual enjoys the right of directly petitioning congress, yet viewing this case as one of very peculiar character, I deem it my duty to recommend it to your favourable consideration. Besides the justice of this claim, as corresponding to those which have been since recognized and satisfied, it is the fruit of a deed of patriotic and chivalrous daring, which infused life and confidence into our infant navy, and contributed, as much as any exploit in its history, to elevate our national character; public gratitude, therefore, stamps her seal upon it; and the meed should not be withheld which may hereafter operate as a stimulus to our gallant tars.

“I now commend you, fellow citizens, to the guidance of Almighty God, with a full reliance on his merciful providence for the maintenance of our free institutions, and with an earnest supplication, that, whatever errors it may be my lot to commit, in discharging the arduous duties which have devolved on me, I will find a remedy in the harmony and wisdom of your counsels.”

In the house of representatives, March 18th, 1830, the committee on lands for education, report as follows:

The title of the United States to public lands is derived from four sources: first, treaties with foreign powers; second, cession from individual states to the United States, on the recommendation of congress under the old confederation; third, compact with Georgia; fourth, treaty with the Indian tribes. Soon after the declaration of independence, an important question was agitated, in reference to that portion of the United States then wild and unappropriated, called the western country. Some few of the states claimed it as their own separate property. Others denied the existence of such rights, and contended, that the vacant lands of the west, that might fall from the crown by the united efforts of the people, ought to be regarded as the common property of all the states

They were then considered as a great fund, out of which the debt of the revolution would be principally paid, and it was declared to be unjust, that certain states should engross the whole, "*to replace, in a short time, their expenditures,*" while the others contributed equally to the acquisition of this property : and the prosecution of the war "*would be left to sink under the pressure of an enormous debt.*" Influenced by a sense of common justice, and in pursuance of the resolution of the old congress, passed in 1780, the states of Virginia, Massachusetts, Connecticut, and New-York, whose claims comprehend the whole territory north-west of the Ohio river, after making some few reservations, ceded the same to the United States. In 1787, South Carolina conveyed to the United States all her interest beyond her present boundaries.

Since the adoption of the present constitution, North Carolina, in 1790, ceded to the United States all that territory beyond the Allegany mountains, which now forms the state of Tennessee; subject, however, to so many extensive claims previously derived from that state, that the government has realized no benefit from the sales. All the cessions conveyed to the United States the right of soil, as well as jurisdiction, to the territory granted, and declared, in terms similar to the language made use of in the cession of Virginia, whose title assumed to cover the whole northwestern territory, that the lands so ceded shall be considered a common fund for the use and benefit of such of the United States as have become, or shall become, members of the confederation, or federal alliance of said states, Virginia inclusive, according to their respective proportion in the general charge and expenditures, and shall be faithfully and bona fide disposed of for that purpose, and no other. The domains thus vested in the United States, was upon no contingency or event to revert back to the state making the cession, or to become the separate property of individual states. It was expressly made a common fund, and a trust and authority was reposed in congress.

As fast as the population would admit, new states have been created upon the public domain, both within and out of the northwestern territory, with all the political rights of the original states: and, upon their admission into the Union, they have agreed, by express compact, that the legislature should never interfere with the primary disposal of the soil, nor with any regulations Congress might find necessary for securing the title in such soil to the bona fide purchasers.

In exercise of the trust and authority to dispose of the public domain, Congress has directed extensive surveys to be made into townships, sections, and sub-divisions of the most convenient form, exceeding at this time 150 millions of acres. The whole quantity that has been sold to the first of January, 1830, amounts to 22,500,000 acres, for which the sum of 37,145,876 dollars has been received and paid toward the redemption of the public debt.

Besides this appropriation, which is for the common benefit of every state, Congress has granted one entire section of land, equal to 640 acres, in each township, of six miles square, in all the states upon the national territory, amounting, in the whole, to upwards of 5,000,000 acres, to be enjoyed by the inhabitants of such towns forever for the use of schools. It has also granted to the same states, the salt springs, and one twentieth part of the money arising from the sale of lands, for the construction of roads and canals. In addition to these general grants, extensive donations have been made by particular acts of Congress, for colleges, academies, numerous individuals, canals, the improvement of navigable rivers, and for other objects of local as well as national concerns. Gratuities of the public lands were formerly made with much caution, and with a sparing hand. Of late, however, a greater liberality has been manifested, and in the years 1827 and 1828, the donations for internal improvement alone exceeded the amount of sales. Although most of those grants may be for the advancement of useful or national objects, yet, from the nature of the appropriations, they will often be partial in their operations, and confer privileges upon some sections of the country, not equally imparted to others. If the whole of the public domains should be disposed of by special act of

Congress, a great increase of difficult legislation would be incurred, and, with the most patient industry, and purest intention, it would be impossible for Congress to make the apportionments to the different parts of the Union, so as to render equal justice, and give general satisfaction. In regulating the sale of the public land, the price has ever been regarded as a subject of great delicacy and importance. Whether it is now too high, or too low, or should be graduated in future, the committee would not undertake to express any opinion. Some sentiments have been advanced, that a liberal policy should induce Congress to reduce the price to a very low rate for the benefit of new states, and even to grant the lands without any consideration to all who might be induced to take possession for the purpose of cultivation. The committee are fully of the opinion that the public domains ought not to be regarded as a source of great revenue, yet it cannot be given away to individuals, nor even in any partial manner, without violating the vested rights of the states, and the trust that is reposed in the general government. The price ought never to be so high as to obstruct emigration, and cramp the vigorous growth of the west, or reduced so low as to encourage speculation, or depress materially the value of land heretofore purchased, or the general agricultural interest of the country; but fixed at a moderate standard, which shall render the acquisition of farms easy to all persons of small means and common industry, and secure the settlement of the new lands as fast as the increase of the population will admit.

Since the commencement of President Jackson's administration, a treaty has been concluded with Great Britain in relation to the trade between the United States and her West India and North American Colonies, which has settled a question that has for years afforded matter for contention, and almost uninterrupted discussion, and which has been the subject of no less than six negotiations, in a manner which promises results highly favourable both to this country and to Great Britain. The negotiation which brought about this desirable arrangement, was characterized throughout, by the most frank and friendly spirit on the part of Great Britain, and concluded

ed in a manner strongly indicative of a sincere desire to cultivate the best relations with the United States.

Treaties equally advantageous and honourable to this country have also been concluded with the government of France, Denmark, Brazil, and Colombia, by which the claims of American citizens against them have been acknowledged and paid. Some of these claims were of long standing, more especially that preferred against France; but by the energy and labour of our minister resident at that Court, and the magnanimity of the present king, Louis Philip, this claim has been allowed. This event, we trust, will serve to remove those prejudices, which the long deferment of justice to our citizens, had engendered in the bosoms of many, and restore that harmony and friendship which united the two nations during our Revolution, and for some years subsequent.

Treaties of commerce with Colombia and Mexico have been advantageously made. That concluded with the former government has released our merchants from an oppressive duty of discrimination which was imposed on our commerce, and has proved of considerable benefit to our commercial interests.

On the 7th of April, 1831, the Secretary of War tendered his resignation to the President, also the Secretary of the Treasury, and Secretary of the Navy, handed theirs; all of which were accepted; and on the 11th of the same month, the Secretary of State tendered his resignation to the President, which was accepted.

The President then proceeded to appoint the following gentlemen to fill the places of the above vacancies:—Edward Livingston, Secretary of State; Lewis M'Lane, Secretary of the Treasury; Lewis Cass, Secretary of War; Levi Woodbury, Secretary of the Navy; Roger B. Taney, Attorney General; Wm. T. Barry, Post Master General.

The national debt has been in some degree diminished. Mr. M'Lane, the present Secretary of the Treasury, has given notice for the payment of six millions of dollars on the first of January, 1832.

* Not slaves but "indentured colored servants."

First building at Detroit, was a fortification erected by a party of French soldiers, about the year 1680.—Pages 480, 481.

Sergeant-Major Champe's Adventure.—Page 499.

CHAPTER XX.

HAVING completed the History so far as to include the Fifth Census, we shall here introduce a relation of certain adventures achieved by two of the revolutionary heroes. We were unwilling to interrupt the thread of History by introducing them in chronological order. The interest of these anecdotes will ensure them a welcome in any place.

Adventures of Sergeant Major Champe.

After the capture and conviction of Major Andre as a spy, September 10, 1780, General Washington conceived the project of capturing General Arnold, then in New York, and releasing Andre. He sent for Major Lee to his quarters, to consult with him on the subject, and procure a man for the dangerous enterprise.

"I have sent for you," said General Washington, "in the expectation that you have some one in your corps, who is willing to undertake a delicate and hazardous project. Whoever comes forward will confer great obligations upon me personally, and, in behalf of the United States, I will reward him amply. No time is to be lost; he must proceed, if possible, to-night. I intend to seize Arnold, and save Andre."

Major Lee named a sergeant major of his corps, by the name of *Champe*—a native of Virginia, a man full of bone and muscle—with a countenance grave, thoughtful, and taciturn—of tried courage, and inflexible perseverance.

Champe was sent for by Major Lee, and the plan proposed. This was, for him to desert—to escape to New York—to appear friendly to the enemy—to watch Arnold, and, upon some fit opportunity, with the assistance of some one whom Champe could trust, to seize him, and conduct him to a place on the river, appointed, where boats should be in readiness to bear them away.

Champe listened to the plan attentively—but, with the spirit of a man of honour and integrity, replied—

"that it was not danger nor difficulty, that deterred him from immediately accepting the proposal, but the *ignominy of desertion, and the hypocrisy of enlisting with the enemy!*"

To these objections, Lee replied, that although he would appear to desert, yet as he obeyed the call of his commander in chief, his departure could not be considered as criminal, and that, if he suffered in reputation, for a time, the matter would one day be explained to his credit. As to the second objection, it was urged, that to bring such a man as Arnold to justice—loaded with guilt as he was—and to save Andre—so young—so accomplished—so beloved—to achieve so much good in the cause of his country—was more than sufficient to balance a wrong, existing only in appearance.

The objections of Champe were at length surmounted, and he accepted the service. It was now eleven o'clock at night. With his instructions in his pocket, the sergeant returned to camp, and, taking his cloak, valise, and orderly book, drew his horse from the picket, and mounted, putting himself upon fortune.

Scarcely had half an hour elapsed, before Captain Carnes, the officer of the day, waited upon Lee, who was vainly attempting to rest, and informed him, that one of the patrol had fallen in with a dragoon, who, being challenged, put spurs to his horse and escaped. Lee, hoping to conceal the flight of Champe, or at least to delay pursuit, complained of fatigue, and told the captain that the patrol had probably mistaken a country man for a dragoon. Carnes, however, was not thus to be quieted; and he withdrew to assemble his corps. On examination, it was found that Champe was absent. The captain now returned, and acquainted Lee with the discovery, adding, that he had detached a party to pursue the deserter, and begged the major's written orders.

After making as much delay as practicable, without exciting suspicion, Lee delivers his orders— in which he directed the party to take Champe if possible. "Bring him alive," said he, "that he may suffer in the presence of the army; but kill him if he resists, or if he escapes after being taken."

A shower of rain fell soon after Champe's departure, which enabled the pursuing dragoons to take the trail of his horse, his shoes, in common with those of the horses of the army, being made in a peculiar form, and each having a private mark, which was to be seen in the path.

Middleton, the leader of the pursuing party, left the camp a few minutes past twelve, so that Champe had the start of but little more than an hour—a period by far shorter than had been contemplated. During the night, the dragoons were often delayed in the necessary halts to examine the road; but, on the coming of morning, the impression of the horses shoes was so apparent, that they pressed on with rapidity. Some miles above Bergen, a village three miles north of New York, on the opposite side of the Hudson, on ascending a hill, Champe was descried, not more than half a mile distant. Fortunately, Champe descried his pursuers, at the same moment, and, conjecturing their object, put spurs to his horse, with the hope of escape.

By taking a different road, Champe was, for a time, lost sight of—but, on approaching the river, he was again descried. Aware of his danger, he now lashed his valise, containing his clothes and orderly book, to his shoulders, and prepared himself to plunge into the river, if necessary. Swift was his flight, and swift the pursuit. Middleton and his party were within a few hundred yards, when Champe threw himself from his horse and plunged into the river, calling aloud upon some British galleys, at no great distance, for help. A boat was instantly despatched to the sergeant's assistance, and a fire commenced upon the pursuers. Champe was taken on board, and soon after carried to New York, with a letter from the captain of the galley, stating the past scene, all of which he had witnessed.

The pursuers having recovered the sergeant's horse and cloak, returned to camp, where they arrived about three o'clock the next day. On their appearance with the well known horse, the soldiers made the air resound with the acclamations that the scoundrel was killed. The agony of Lee, for a moment, was past description,

lest the faithful, honourable, intrepid Champe had fallen. But the truth soon relieved his fears, and he repaired to Washington to impart to him the success, thus far, of his plan.

Soon after the arrival of Champe in New York, he was sent to Sir Henry Clinton, who treated him kindly, but detained him more than an hour in asking him questions, to answer some of which, without exciting suspicion, required all the art the sergeant was master of. He succeeded, however, and Sir Henry gave him a couple of guineas, and recommended him to Arnold, who was wishing to procure American recruits. Arnold received him kindly, and proposed to him to join his legion; Champe, however, expressed his wish to retire from war; but assured the general, that if he should change his mind, he would enlist.

Champe found means to communicate to Lee an account of his adventures; but, unfortunately, he could not succeed in taking Arnold, as was wished, before the execution of Andre. Ten days before Champe brought his project to a conclusion, Lee received from him his final communication, appointing the third subsequent night for a party of dragoons to meet him at Hoboken, opposite New York, when he hoped to deliver Arnold to the officers.

Champe had enlisted into Arnold's legion, from which time he had every opportunity he could wish, to attend to the habits of the general. He discovered that it was his custom to return home about twelve every night, and that, previously to going to bed, he always visited the garden. During this visit, the conspirators were to seize him, and, being prepared with a gag, they were to apply the same instantly.

Adjoining the house in which Arnold resided, and in which it was designed to seize and gag him, Champe had taken off several of the pailings and replaced them, so that with ease, and without noise, he could readily open his way to the adjoining alley. Into this alley he intended to convey his prisoner, aided by his companion, one of two associates, who had been introduced by the friend to whom Champe had been originally made

known by letter from the commander in chief, and with whose aid and counsel, he had so far conducted the enterprise. His other associate was with the boat, prepared at one of the wharves on the Hudson river, to receive the party.

Champe and his friend intended to place themselves each under Arnold's shoulder, and thus to bear him through the most unfrequented alleys and streets to the boat, representing Arnold, in case of being questioned, as a drunken soldier, whom they were conveying to the guard-house.

When arrived at the boat, the difficulties would be all surmounted, there being no danger nor obstacle in passing to the Jersey shore. These particulars, as soon as made known to Lee, were communicated to the commander in chief, who was highly gratified with the much desired intelligence. He desired Major Lee to meet Champe, and to take care that Arnold should not be hurt.

The day arrived, and Lee, with a party of accoutred horses, (one for Arnold, one for the sergeant, and the third for his associate, who was to assist in securing Arnold,) left the camp, never doubting the success of the enterprise, from the tenor of the last received communication. The party reached Hoboken about midnight, where they were concealed in the adjoining wood—Lee, with three dragoons, stationing himself near the shore of the river.—Hour after hour passed, but no boat approached.

At length the day broke, and the major retired to his party, and, with his led horses, returned to the camp when he proceeded to head quarters to inform the general of the much lamented disappointment, as mortifying as inexplicable. Washington, having perused Champe's plan and communication, had indulged the presumption, that, at length, the object of his keen and constant pursuit was sure of execution, and did not dissemble the joy which such a conviction produced. He was chagrined at the issue, and apprehended that his faithful sergeant must have been detected in the last scene of his tedious and difficult enterprise.

In a few days, Lee received an anonymous letter from Champe's patron and friend, informing him, that on the day preceding the night fixed for the execution of the plot, Arnold had removed his quarters to another part of the town, to superintend the embarkation of troops, preparing, as was rumored, for an expedition to be directed by himself; and that the American legion, consisting chiefly of American deserters, had been transferred from their barracks to one of the transports, it being apprehended that if left on shore, until the expedition was ready, many of them might desert.

Thus it happened that John Champe, instead of crossing the Hudson that night, was safely deposited on board one of the fleet of transports, from whence he never departed, until the troops under Arnold landed in Virginia. Nor was he able to escape from the British army, until after the junction of Lord Cornwallis at Petersburg, when he deserted: and proceeding high up into Virginia, he passed into North Carolina, near the Sauratown, and, keeping in the friendly districts of that State, safely joined the army soon after it had passed the Congaree, in pursuit of Lord Rawdon.

His appearance excited extreme surprise among his former comrades, which was not a little increased, when they saw the cordial reception he met with from the late major, now Lieutenant Col. Lee. His whole story was soon known to the corps, which re-produced the love and respect of officers and soldiers, heretofore invariably entertained for the sergeant, heightened by universal admiration of his late daring and arduous attempt.

Champe was introduced to General Greene, who very cheerfully complied with the promise made by the commander in chief, so far as in his power; and having provided the sergeant with a good horse and money for his journey, sent him to general Washington, who munificently anticipated every desire of the sergeant, and presented him with a discharge from further service, lest he might, in the vicissitudes of war, fall into the hands of the enemy, when, if recognized, he was sure to die on a gibbet.

We shall only add, respecting the after life of this

Adventure of General Putnam.—Page 505.

General Atkinson's Victory over Black Hawk, on the banks of the Mississippi, Aug. 2d, 1832.—Page 520.

interesting adventurer, that, when General Washington was called by President Adams, in 1798, to the command of the army, prepared to defend the country against French hostility, he sent to Lieutenant Col. Lee, to inquire for Champe; being determined to bring him into the field at the head of a company of infantry. Lee sent to Loudon county, Virginia, where Champe settled after his discharge from the army; when he learned that the gallant soldier had removed to Kentucky, where he soon after died.

General Putnam's adventure.

General Putnam, who had been stationed with a respectable force at Reading, in Connecticut, then on a visit to his out-post, at Horse-Neck, was attacked by Governor Tryon, with one thousand five hundred men. Putnam had only a picket of one hundred and fifty men, and two field pieces, without horses or drag ropes. He however placed his cannon on the high ground near the meeting house, and continued to pour in upon the advancing foe, until the enemy's horse appeared upon a charge. The general now hastily ordered his men to retreat to a neighbouring swamp, inaccessible to horse, while he himself put spurs to his steed, and plunged down the precipice at the church.

This is so steep as to have artificial stairs, composed of nearly *one hundred stone steps*, for the accommodation of worshippers ascending to the sanctuary. On the arrival of the dragoons at the brow of the hill, they paused, thinking it too dangerous to follow the steps of the adventurous hero. Before any could go round the hill and descend, Putnam had escaped, uninjured by the many balls which were fired at him in his descent; but one touched him, and that only passed through his hat. He proceeded to Stamford, where, having strengthened his picket with some militia, he boldly faced about and pursued governor Tryon on his return.

CHAPTER XXI.

Events of 1832 and 1833. Indian War. Battle of Wisconsin. Battle on the Mississippi, August 2, 1832

THE hostilities commenced in 1832 by the Sac and Fox Indians, may be traced to causes which had been for some time in operation, and which left little doubt upon the minds of those acquainted with the savage character, that they were determined to commit some aggression upon the frontier.

The confederated tribes of the Sacs and Foxes had been long distinguished for their daring spirit of adventure, and for their restless and reckless disposition. At the commencement of the eighteenth century, one of these tribes made a desperate attempt to seize the post of Detroit; and during a period of forty years, subsequent to that effort, they caused great trouble and embarrassment to the French colonial government, which was only terminated by a most formidable military expedition, sent by that enterprising people into the then remote regions west of Green Bay.

During the last war with Great Britain, this confederacy entered zealously into the contest, and was among the most active and determined of our enemies. After the peace, their communication with the Canadian authorities was preserved; and every year, large parties of the most influential chiefs and warriors visited Upper Canada, and returned laden with presents. That this continued intercourse kept alive feelings of attachment to a foreign power, and weakened the proper and necessary influence of the United States, is known to every one, who has marked the progress of events and the conduct of the Indians upon the north-western frontier. The tribes upon the Upper Mississippi, particularly the Sacs and Foxes and the Winnebagoes, confident in their position, and in their natural courage, and totally ignorant of the vast disproportion between their

power and that of the United States, had always been discontented, keeping the frontier in alarm, and continually committing some outrage upon the persons or property of the inhabitants. All this was the result of impulse, and the necessary and almost inevitable consequence of institutions, which make war the great object of life. It is not probable, that any Indian, seriously bent upon hostilities, ever stops to calculate the force of the white man, and to estimate the disastrous consequences, which we know must be the result. He is impelled onward in his desperate career by passions, which are fostered and encouraged by the whole frame of society; and he is, very probably, stimulated by the predictions of some fanatical leader, who promises him glory, victory, and scalps.

In this state of feeling, and with these incitements to war, the Sacs and Foxes claimed the right of occupying a part of the country upon Rock river, even after it had been sold to the citizens of the United States, and settled by them. In 1829, and in 1830, serious difficulties resulted from their efforts to establish themselves in that section, and frequent collisions with the inhabitants were the consequence. Representations were made to them, and every effort, short of actual hostilities, used by the proper officers, to induce them to abandon those unfounded pretensions, and to confine themselves to their own country on the west side of the Mississippi river. Those efforts were successful with the well disposed portion of the tribes, but were wholly unavailing with the band known by the name of the "British party." In 1831, their aggressions were so serious, and the attitude they assumed so formidable, that a considerable detachment of the army, and of the militia of Illinois, was called into the field, and the disaffected Indians, alarmed by the preparation for their chastisement, agreed to reside and hunt "upon their own lands west of the Mississippi river," and that they would not "recross this river to the usual place of their residence, nor to any part of their old hunting grounds east of the Mississippi, without the express permission of the President of the United States, or the Governor of the state of Illinois."

This arrangement had scarcely been concluded before a flagrant outrage was committed, by a party of these Indians, upon a band of friendly Menomonies, almost under the guns of Fort Crawford. Twenty-five persons were wantonly murdered, and many wounded, while encamped in the village of Prairie du Chien, and resting in fancied security upon our soil, and under our flag. If an act like this had been suffered to pass unnoticed and unpunished, a war between these tribes would have been the consequence, in which our frontiers would have been involved, and the character and influence of the government would have been lost in the opinion of the Indians.

Apprehensive from the course of events already stated, and from other circumstances, that the disaffected band of Sacs and Foxes would again harass and disturb the settlements upon our borders, and determined that the murderers of the Menomonies should be surrendered or taken, the department ordered General Atkinson, on the 7th of March, 1832, to ascend the Mississippi with the disposable regular troops at Jefferson Barracks; and to strengthen the frontiers, orders were given for the re-occupation of Chicago.

The demand for the surrender of the Menomonic murderers was entirely disregarded; and the "British party" of the Sacs and Foxes recrossed the Mississippi, and, assuming a hostile attitude, established themselves upon Rock river.

On the 14th of May, near Dixon's Ferry, on Rock river, a small party of Indians was seen displaying a white flag. It was approached by a company of militia to ascertain its intentions. The Indians receded, for the purpose of drawing the whites into an ambuscade. This induced the commanding officer to fall back; but another officer and his company came up, passed the retreating party, and pursued the enemy. The Indians now showed a superior force, turned and attacked the militia, and repulsed the whites with considerable loss. Fifty-two men were missed. The Indians continued their warfare, and many defenceless families were massacred on the frontier of Illinois. A party of seven or

eight, with the Indian agent, St. Vrain, while attempting to effect a passage from Galena to the head quarters of the force under Gen. Atkinson, at Dixon's Ferry, was attacked by a superior force of Indians, and nearly all, including the agent, killed. The whole country was infested by small parties of Indians, who suddenly fell on the unsuspecting whites, whom they murdered. The Steamer Dove, on her downward passage, was attacked by a small party of Indians, just above Rock Island, but no injury was sustained.

JUNE 14th. Five American citizens were killed about five miles below Hamilton's Fort.

JUNE 16th. A citizen was killed about half a mile from the same place. General Dodge, with 29 of his mounted men, went in immediate pursuit; and after going about three miles, discovered the murderers—11 in number—but did not overtake them until they crossed the East Pich-e-ton-e-ka, and entered an almost impenetrable swamp. At the edge of the swamp the men were ordered to dismount and link horses; four men were left in charge of the horses, and four were posted around the swamp, on high ground, to observe the motion of the enemy; the remainder, 21, advanced into the swamp, about half a mile; when they received the fire of the Indians, at the distance of about thirty feet, by which three of our men fell, severely wounded. Orders were instantly given to charge; but, as the Indians lay under the bank of a slough, they were concealed till our party was within six or eight feet of them, when the whites immediately fired. The whole hostile party was killed and scalped within one or two minutes, excepting one, who attempted to make his escape by swimming the slough, but was shot down on the opposite bank.—Though few were engaged in this bloody transaction, it was conducted with much gallantry, and entitles Gen. Dodge and his brave associates to the highest credit. A few such examples will strike terror into the hearts of the Indians.

On the same day, a party of Indians was attacked by Capt. Snyder, near Kellogg's Grove, and defeated, with the loss of four;—one of Capt. Snyder's company was

mortally wounded. On his return, he halted near a small stream of water, and was fired upon by a body of Indians, who lay concealed; two of his men were killed, and one mortally wounded. The company was immediately formed, and retreated in good order before a superior force of the Indians.

JUNE 18th.—A bloody engagement took place between a small party of Americans, commanded by Capt. Stevenson, and a superior party of the Indians, on Apple creek. Three of our men were lost, and Capt. Stevenson wounded, though, it is hoped, not dangerously. The precise number of Indians killed is not ascertained, though it is supposed five or six. The combatants came into such close quarters during this engagement, as to be constrained to use the bayonet and butcher's knife.

On the 24th of June, a large body of Indians made an attack on the Fort at Buffalo Grove, situated on Rock river, about twelve miles north of Dixon's Ferry, and fifty-five miles from Galena. The fort was defended by about one hundred and fifty militia, who kept the Indians at bay, until their ammunition was nearly expended: in this critical situation, an officer of the fort, who had been wounded in the firing, made his way out, and went in quest of reinforcement of men and arms. He either went to Rock river, where General Atkinson was, and there procured the aid he had gone to seek, or met a detachment, under Colonel Posey, proceeding to the fort; this latter body marched on, drove off the Indians, and relieved the garrison.—The number of killed and wounded, on either side, was not ascertained. Sixteen Indians were known to have been killed.

An express, consisting of four persons, sent from Galena, was attacked when near the fort on Apple river, twelve miles from Galena, and immediately retreated. One man, Edward Welsh, was wounded by a shot in the thigh, before he reached the fort; another, his name not known, was killed, after gaining cover. One other man was also wounded in the fort. This party of Indians was repulsed by the garrison, consisting of thirty men under the command of Captain Stone, but succeeded in carrying off all the horses, cattle, hogs, and two yokes of working

steers; they also destroyed all the moveables that were found in the houses around the fort, but left the buildings uninjured.

The following intelligence is extracted from the *Galenian*, dated 4th of July. It is, we believe, the most particular account of the state of Indian war on the north-western frontier.

JUNE 27.—*Seat of war.*—An express reached town to-day from Kellogg's Grove, bringing information that a battle had been fought with the Indians in that neighbourhood, on Monday morning, by a part of the company of Spies, under the command of Major Dement. The particulars of which are subjoined.

On Sunday evening, Major Dement arrived at Kellogg's Grove, and receiving information early the following morning that traces of Indians were plainly discernible in that immediate neighbourhood, called for twenty or thirty volunteers to accompany him to reconnoitre the neighbourhood. In a short time they came upon the enemy, whose force was too formidable to be resisted by so small a number; and being too far advanced to make good his retreat, lost some of his party before the arrival of the remainder of his company, after which a considerable skirmish ensued; but, owing to the refractory and unmanageable temper of the horses, occasioned by the clash of arms and the Indian yell, it was found impracticable to form a line; yet, under all these disadvantages, a number of Indians were killed; the exact number cannot be ascertained, as they were seen to carry several of their dead from the field during the engagement. Major Dement lost five men, and about twenty horses, killed, in the battle. Nine Indians were found on the field.

JUNE 29.—*More Indian murders.*—About noon an express arrived from the Cincinaway Mound, announcing the attack on three men who were at work in a corn field about ten miles from this town, and that two of them had fallen.

Major Stephenson, who had just returned to Galena, from an excursion in the country, with a few mounted men, immediately put about thirty in readiness to march

in pursuit of the Indians. With a forced march, his detachment soon arrived at the scene of death, where were found the bodies of James Boxley and John Thompson, most shockingly mangled. The heart of Thompson was taken out, and both were scalped!

A few men were left to bury the dead, while the main body of the company went in pursuit of the Indians. They tracked them to the residence of Mr. Jordan, on the bank of the Mississippi, and found that they had just stolen a canoe, and crossed the river.

No signs appeared of more than five Indians, though a large body was probably on the other side. But the company had no means of crossing, and returned to Galena on the following day.

This was a very unexpected attack, and from a quarter as little expected. It appears now that attacks are made all around this town, and murders committed nearly in sight of our stockade.

JUNE 30.—All the inhabitants north of us, and on the Mississippi, this side of Cassville, have come in to-day, and intend to remain until the war is ended. It is now viewed to be very unsafe to go one mile from this place without a formidable guard.

A gentleman who has just arrived, states that he left an army of two brigades on the waters of Apple river, on the night of the 29th. One is to report to General Dodge, who will immediately take command of them.

General Atkinson, we learn, has at length commenced his line of march with about one thousand three hundred mounted men, and five hundred regulars. He is moving on the east side of Rock river.

JULY 2.—A detachment of sixty mounted volunteers, composed of Captains Craig and Duncan's companies, left town, by order of Colonel Strode, under command of Major Stevenson, to join the main army, which is now marching to the Indian encampments with a view of a general extermination.

Lieutenants Holmes and Crossman, and Mr. Enoch C. March, Q. M. G. arrived here this afternoon from General Atkinson's head quarters, at the mouth of Syca

more creek, state that between Buffalo Grove and Kerlogg's Grove, and in the latter, they saw three very large fresh Indian trails yesterday and the day before, and several smaller ones.—They do not believe that the trail could have been more than a day or two old, when they saw it. They all ran S. S. W. to N. N. E. in a direction where, we understand, the main body of the Indians are stationed.

Such of the mounted volunteers as remain, of Captains Craig and Duncan's companies, have been placed under command of the former, and will continue to reconnoitre the country around Galena. They have returned this evening, but report no signs of hostility as having met their observation.

JULY 3.—Half the horsemen left under command of Captain Craig, for reconnoitering expeditions, have been ordered to range and scour the country from Rice's farm, on the mouth of Small Pox creek, to Bowles' furnace, and thence to Galena; and the other half to march to the mouth of the Cincinaway, thence ranging between it and the Menominee eastwardly, to Vinegar Hill, and thence to Galena.

In crossing the country from Dixon's to Galena, several large and recent trails of Indians were discovered, proceeding apparently from the Mississippi, near Plum river, and going in the direction of the Four lakes. From accounts given, as we understand, by some engagees who lately descended the Missouri, we are almost confirmed in the opinion, that these trails were made by parties of Indians coming from the different tribes on the Missouri.

We have no rangers about Plum river to confirm this opinion, but a passenger in the Warrior states, that the banks are much cut up near that place. General Atkinson has, after ordering the brigades under generals Posey and Alexander, to cross Rock river, and operate on this side in conjunction with General Dodge, marched with the regular troops and General Henry's brigade, for the Indian camp; at which place it is expected he certainly will have arrived by yesterday evening; if so, and the Indians remain, the strongest probability exists

of an immediate fight. The troops operating on this side of Rock river, are to be subsisted from Galena. Two companies of volunteers, said to be very well equipped, have been ordered on the route to Galena, to report to Colonel March or Colonel Holmes, and receive their instructions until they get orders from a higher source. Should the Indians stand a fight, no matter if they are vanquished or victorious, (the latter we do not believe they will be,) Galena will, in our opinion, be in more danger than at any former period, as, if they do not proceed directly for Canada, or the Chippewa country, they will undoubtedly separate for the purpose of marauding and distressing the country. Great difficulty exists at head quarters in obtaining correct intelligence from important points in the country, as many expresses have been compelled to return without executing their orders. The campaign has now commenced, and under very fair prospects for success, considering that the front line of operations extends from the Mississippi to Chicago, and the difficulties attending the forwarding of provisions, to subsist the army for any long time.

Extract of a letter from Brigadier General Atkinson to Colonel J. M. Strode, dated

*Head Quarters of the Army of the Frontier,
Camp, below Sycamore Creek, June 29, 1832.*

"Heretofore I have not had the means of preventing the enemy from committing acts of hostility in the district of country between Rock river and Galena. The force now in the field under my command, and the operations now about to be carried into effect, will, I hope, put an end to the war, and restore tranquillity to the country."

Official intelligence of the battle with Black Hawk.

Despatches were received from the army under General Atkinson, dated *Blue Mounds*, July 25, 1832, stating that General Henry, with his brigade, accompanied by General Dodge, with a battalion of Michigan volunteers, had been detached by General Atkinson, in pursuit of the Sacs and Foxes, under Black Hawk. They succeeded, by forced marches, in coming up with him, on the bank of the

Wisconsin, opposite to the Blue Mounds, on the evening of the 21st of July. An attack was immediately made on the Indians, which resulted in their defeat, with a loss of about forty men killed, on the part of the enemy; and, it is presumed, a much larger number wounded; as the Indians were seen, during the action, bearing a great number of them off the field. The loss, on our part, was trifling; amounting to one man killed, and eight wounded. Night coming on, our troops being exceedingly fatigued, having marched forty miles that day, no pursuit could be attempted: thus the enemy was saved from entire destruction. Black Hawk passed over to an island in the Wisconsin, to which place he had sent his women. Generals Henry and Dodge remained on the ground the succeeding day and night, and part of the next day, being unable to renew the attack in consequence of the entire absence of boats and canoes, or the means of constructing rafts to cross to the island. Generals Henry and Dodge marched to the Blue Mounds on the evening of the 23d for a supply of provisions, where they were joined by Gen. Atkinson, with the regular troops and part of General Alexander's brigade. After a forced march of three days from Cos-co-nong, General Atkinson writes, that he would move with his whole force on the morning of the 25th of July, the date of his despatch, to a point on the Wisconsin, sixteen miles below the Blue Mounds, where he would endeavour to cross the river by rafts or some other means, and if possible overtake the Indians and subdue them, notwithstanding the troops were worn down with fatigue and privations. The general states that the enemy must be much crippled, and in a suffering condition for the want of subsistence. The troops under Generals Henry and Dodge are represented to have behaved with great gallantry, having resisted with firmness a charge from the enemy on horseback, and in turn charged him with great promptness, routing him on every point, to which is attributable the very small loss on our side. While our men deserve great credit for their gallantry and steadiness, the Indians are entitled to no less consideration for the skill and perseverance displayed by them in their

retreat. Appearances indicate the war will soon terminate, and peace be restored to the frontiers.

It appears that after the first battle of General Dodge with the main body of the Indians on the Wisconsin, the Black Hawk determined to retreat across the Mississippi. This was ascertained from a squaw, the sister of Ke-o-kuck, and wife of the Big Lake, whom she supposed to have been killed when she was taken prisoner. She says that the Black Hawk had directed all of his band who had not good horses, to descend the Wisconsin in canoes to the Mississippi, and to continue down the Mississippi to the Wa-pese-per-ne-kaw, and to ascend this river, which runs from the west, to its head waters. In the meantime it was his intention to press for the Mississippi, a considerable distance above Prairie du Chien, and crossing it about Racoon Creek, to go by Red Cedar, and meet those that had descended at a place of rendezvous some distance on the west of the Mississippi.

She stated that Black Hawk had lost 200 warriors in the different skirmishes, before the battle with Gen. Dodge—that many of those who embarked in canoes had been lost in consequence of bad canoes and sinking—that a considerable number had passed down the Mississippi unobserved, through the fogs—and that others of those that embarked on the Wisconsin, and remained behind, applied to the Winnebagoes to come with them and surrender to the whites.

The fate of that portion of the tribes of the Sacs and Foxes, which directed their flight to the Mississippi, under the orders of the Black Hawk, consisting principally of warriors, will be seen in the following account.

This party first encountered the steam boat Warrior about forty miles above Prairie du Chien.

The Indians showed *two* white flags, declared they were Winnebagoes, and endeavoured, by signs and otherwise, to bring about a landing of the boat. About one hundred and fifty showed themselves *without* arms on the bank, while many others in their rear were observed running back and forth, and preparing their arms for use. In the boat were fifteen soldiers and six volunteers. Messrs. Hempstead, Hough, and Soulard, passengers

besides the crew of the boat—two discharged soldiers from St. Peters had also been taken up on the passage down by the boat. The interpreter, besides being apparently much frightened, did not, as since understood, truly state the replies of the Indians. The battle commenced with a discharge from the six pounder, which was instantaneously returned by the Indians from above and below, along the shore, when the boat was anchored. It commenced a few minutes before 4 o'clock, P. M. and ended a little after 6.

After the two first fires from the cannon and musketry, the whites were compelled to watch for the smoke of the enemy's guns to give their fire, as the Indians had completely concealed themselves behind the trees and logs, which were found on the place.

The United States' officers were Lieutenants Holmes and Kingsbury; the former left this place in the boat with provisions for the army, and the latter was placed on board in charge of the men by Captain Loomis, at Fort Crawford. We understand that the coolness and gallantry of all on board, (the interpreter excepted,) reflected credit upon them. It was with difficulty that Captain Throckmorton could call his crew to the management of the boat when needed, so anxious, from highest to lowest, were they to have a hand in the business. The Indians fired very badly—their fire lasted long enough to average thirteen cartridges, and but one white man was wounded, and only about fifty balls hit the boat. It was ascertained by a prisoner after the battle, that twenty-three or twenty-five were *killed*, wounded not known. This little fight delayed the Indians in their crossing very considerably, and, but for the want of wood, must have entirely prevented it until the coming up of the main army.

The boat, on its return next morning, was fired into again, and the fire returned until the army was discovered on the land where the Indians had been on the previous night.

The whole army under General Atkinson, embracing the brigades commanded by Generals Henry, Posey, and Alexander, and a squadron under the command of General Dodge, all crossed to the north side of the Wisconsin

at Helena on the 28th and 29th ultimo. They took up line of march in a northerly direction, in order to intersect the Indian trail. At the distance of about five miles the great trail was discovered, leading in a direction N. of W. towards the Mississippi, and supposed to be about four days old.

General Atkinson seeing the direction of the enemy, knew well that it would require all diligence and expedition to overtake them before they would cross the Mississippi, and hence commenced from that time a *forced march*; leaving all the baggage wagons, and every thing else which was calculated to retard the pursuit.

The country through which the enemy's trail led our army, between the Wisconsin bluffs and the Kickapoo river, was one continued series of mountains. No sooner had they reached the summit of one high and almost perpendicular hill than they had to descend on the other side equally steep, to the base of another. Nothing but a deep ravine, with muddy banks, separated these mountains. The woods, both upon the top of the highest mountains, and at the bottom of the deepest hollows, was of the heaviest growth. The under bushes were chiefly thorn and prickly ash. This is a short description of the route, and shows the difficulties of the pursuit. Notwithstanding all this, our army gained on the enemy daily, as appeared from the enemy's encampments. The tedious march thus continued was endured by our brave troops without a murmur; and as the Indian signs appeared more recent, the officers and men appeared more anxious to proceed. On the fourth night of our march from Helena, and at an encampment of the enemy, was discovered an old Sac Indian by our spies, who informed them that the main body of the enemy had, on that day, gone to the Mississippi, and intended to cross on the next morning, being the 2d of August. The horses being nearly broken down, and the men much exhausted from fatigue, General Atkinson ordered a halt for a few hours, (it being after 8 o'clock,) with a determination to start at 2 o'clock for the Mississippi, about ten miles distant. At the precise hour, the bugles sounded, and in a short time all were ready to march.

General Dodge's squadron was honoured by being placed in front, the infantry followed next, General Henry's brigade next, General Alexander's next, and General Posey's formed the rear guard.

General Dodge called for, and as soon received, twenty volunteer spies to go ahead of the whole army.

In this order the march commenced. They had not, however, gone more than five miles before one of our spies came back, announcing their having come in sight of the enemy's picket guard. He went back, and the intelligence was quickly conveyed to General Atkinson, then to all the commanders of the brigades, and the celerity of the march was instantly increased. In a few minutes more the firing commenced about five hundred yards ahead of the front of the army, between our spies and the Indian picket guard. The Indians were driven by our spies from hill to hill, and kept up a tolerably brisk firing from every situation commanding the ground over which our spies had to march; but being charged and routed from their hiding places, they sought safety by retreating to the main body on the bank of the river, and joined in one general effort to defend themselves there or die on the ground.

Lest some might escape by retreating up or down the river, General Atkinson very judiciously ordered General Alexander and General Posey to form the right wing of the army, and march down to the river above the Indian encampment on the bank, and then move down. General Henry formed the left wing, and marched in the main trail of the enemy. The United States' infantry and General Dodge's squadron of the mining troops marched in the centre.

With this order our whole force descended the almost perpendicular bluff, and came into a low valley, heavily timbered, with a large growth of under brush, weeds, and grass. Sloughs, deep ravines, and old logs, were so plentiful, as to afford every facility for the enemy to make a strong defence.

General Henry first commenced a heavy fire, which was returned by the enemy. The enemy being routed from their first hiding places, sought others. Genera

Dodge's squadron and the United States' troops soon came into action, and with General Henry's men, rushed into the strong defiles of the enemy, and killed all in their way, except a few who succeeded in swimming a slough of the Mississippi, one hundred and fifty yards wide. During this time, the brigades of Generals Alexander and Posey were marching down the river, when they fell in with another part of the enemy's army, and killed and routed all that opposed them.

The battle lasted upwards of three hours. About fifty of the enemy's women and children were taken prisoners, and many were killed in the battle.

When the Indians were driven to the bank of the Mississippi, some hundreds of men, women, and children, plunged into the river, and hoped, by diving, to escape the bullets of our guns; very few, however, escaped our sharpshooters.

The loss on the side of the enemy never can be exactly ascertained, but, according to the best computation, they must have lost in killed, upwards of one hundred and fifty. Our loss in killed and wounded was twenty-seven.

Some had crossed the river before our arrival, and we learn by a prisoner, that Black Hawk, while the battle waxed warm, had stolen off, and gone up the river on this side. If he did, he took nothing with him; for his valuables, many of them, together with certificates of good character, and of his having fought bravely against the United States during the last war, signed by British officers, were found on the battle ground.

Further particulars of the battle of the 2d of August

"HEAD QUARTERS 1ST. ARMY CORPS, }
NORTH-WESTERN ARMY. }

"Fort Crawford, Prairie du Chien, August 9.

"SIR:—I informed you on the 5th inst. by a short official note, of the action on the morning of the 2d inst. between the troops under my command and the *Sac* enemy, on the left bank of the Mississippi, opposite Iowa river. Having received the reports of the officers commanding brigades and corps, I have the honour of reporting more in detail the events of the day.

"After having pursued the enemy five days by forced marches, from his passage of the Wisconsin, we found ourselves at dusk, on the evening of the 1st inst. after a march of 25 miles, within a few miles of his position.

"The troops were ordered to encamp and repose till two o'clock in the morning, and then take up the line of march. The signal to assemble was given at this hour, and at dawn I marched with the regular troops, under Colonel Taylor and General Dodge's battalion, leaving the brigades of generals Posey, Alexander, and Henry, to follow, as they were not yet ready to march, their horses having been turned out before the order to march was received by them. After marching about three miles, the advance of Dodge's battalion came up with a small party of the enemy, and killed eight of them, and dispersed the residue. In the mean time, the troops then with me were formed in order of battle—the regulars in extended order with three companies held in reserve. General Dodge's battalion was formed on the left: the whole advanced to the front, expecting to meet the enemy in a wood before us. General Posey's command soon came up, and was formed on the right of the regulars. Shortly after, Alexander arrived, and was formed on the right of General Posey, a position at the time considered of great importance, as it would intercept the enemy in an attempt to pass up the river. Not finding the enemy posted as I anticipated, I detached Captain Dixon with a few of General Dodge's spies, to the left, to gain information, and at the same time sent an officer of my staff to hasten the march of General Henry. Soon after, another was despatched with orders to march on the enemy's trail with one of the regiments of his brigade, and to hold the remainder in reserve. Finding the enemy to be in force in that direction, his whole brigade was ordered on that point. The order was promptly executed by the brigade, having in its advance the small body of spies under Captain Dixon, who commenced the action, seconded simultaneously by General Henry. The enemy was driven across several *sluices* down the river bottom, which was covered with fallen timber, underwood and high grass.

"The regular troops, and General Dodge at the head of his battalion, soon came up and joined in the action, followed by a party of General Posey's troops, when the enemy was driven still further through the bottom to several small willow islands successively, where much execution was done.

"The main body of the enemy being in the bottom and adjoining small islands, General Alexander was ordered to move with his brigade to the point of action: but from the distance of his position he came up too late to participate in the combat, except two companies of his brigade that had previously joined the brigade under Brigadier General Henry.

"Both the regular and volunteer troops conducted themselves with the greatest zeal, courage, and patriotism, and are entitled to the highest approbation of their country. To Brigadier General Henry, of the 3d brigade of Illinois volunteers, General Dodge of the Michigan volunteers, and Colonel Taylor of the United States Infantry, the greatest praise is due for the gallant manner in which they brought their respective corps in, and conducted them through the action. They report a like meed of praise to the officers under their respective commands. To generals Posey and Alexander every credit is due for their conduct and exertions in endeavouring to throw their commands into action, from which, by the arrangement of the order of battle they were unfortunately precluded, excepting a detachment of each. I cannot omit, without injustice to my staff, consisting of lieutenants Johnson, Anderson, Wheelwright, Drane, Brooks, and Clarke of the army, and Colonel March of the volunteers, to mention the zeal, promptitude, and efficiency, they displayed in the discharge of their duty during the action, and the course of the day.

"The enemy sustained a loss of about one hundred and fifty men killed—the precise number could not be ascertained, as a large proportion were slain in endeavoring to swim to the islands. Forty women and children were taken prisoners, and seventy horses captured.

"The loss on our part, was,—of the United States Infantry, five privates killed, and four wounded—General

Posey's volunteers, one private wounded—General Alexander's, one private wounded—General Henry's, one lieutenant and five privates wounded—General Dodge's, one captain, one sergeant, and four privates wounded.

"The steamer *Warrior*, by the direction of Captain Loomis, had ascended the river, with a small detachment of the 4th United States Infantry, under the command of Lieutenant Kingsbury, accompanied by Lieutenants Holmes and Torrence, on the day previous to the battle, to warn the Sioux of the approach of the Sacs:—in returning, near the battle ground, a party of Sacs was discovered, and attacked, when a smart skirmish ensued;—the Indian loss is since reported to be twenty-three killed—one now on board the steamboat slightly wounded. Lieutenants Holmes, Kingsbury, and Torrence, as well as Captain Throckmorton, the commander of the boat, were conspicuous in the affair. A great advantage was derived from the presence of the steamboat on this occasion, as it retarded the enemy in crossing the river.

"I enclose herewith a list of the officers of the volunteers under Generals Henry and Dodge. A list of the officers of the other volunteer corps will be transmitted as soon as received, which I request may be placed on file in the War Office.

"I have the honour to be, &c.

"H. ATKINSON, *Brig. Gen. U. S. Army.*

"To MAJ. GEN. W. SCOTT, *Commanding N. W. Army.*'

PRAIRIE DU CHIEN, *August 27th, 1832.*

At 11 o'clock to-day, Black Hawk and the Prophet were delivered to General Joseph M. Street, by the one-eyed Deconi and Chaetar, Winnebagoes, belonging to his agency. Many of the officers from the fort were present. It was a moment of much interest. The prisoners appeared in a full dress of white-tanned deer-skins. Soon after they were seated, the One-eyed Deconi rose up, and said—

"My Father—I now stand before you: when we parted. I told you I would return soon; but I could not come any sooner. We have had to go a great distance, (to the

Dalle on the Wisconsin—above the Portage.) You see we have done what you sent us to do: these are the two that you told us to get—(pointing to Black Hawk and the Prophet.)

“My Father—We have done what you told us to do. We always do what you tell us, because we know it is for our good.

“My Father—You told us to get these men, and it would be the cause of much good to the Winnebagoes. We have brought them; but it has been very hard for us to do so. That one, Mucatamish-ka-kaek-q, (Black Hawk) was a great way off. You told us to bring them to you alive: we have done so. If you had told us to bring their heads alone, we would have done so—and it would have been less difficult than what we have done.

“My Father—We deliver these men into your hands. We would not deliver them even to our brother, the chief of the warriors, but to you; because we know you, and believe you are our friend. We want you to keep them safe. If they are to be hurt, we do not wish to see it. Wait until we are gone, before it is done.

“My Father—Many little birds have been flying about our ears of late, and we thought they whispered to us that there was evil intended for us; but now we hope these evil birds will let our ears alone.

“My Father—We know you are our friend, because you take our part; and that is the reason we do what you tell us to do.

“My Father—You say you love your red children: we think we love you as much, if not more than you love us. We have confidence in you, and you may rely on us.

“My Father—We have been promised a great deal if we would take these men—that it would do much good to our people. We now hope to see what will be done for us.

“My Father—We have come in haste; we are tired and hungry. We now put these men into your hands; we have done all that you told us to do.”

General Street said—

“My Children—You have done well. I told you to

bring these men to me, and you have done so. I am pleased at what you have done. It is for your good, and for this reason I am pleased. I assured the Great Chief of the Warriors, that if these men were in your country, you would find them, and bring them to me—that I believed you would do whatever I directed you; and now that you have brought them, I can say much for your good. I will go down to Rock Island with the prisoners, and I wish you who have brought these men, especially, to go with me, with such other chiefs and warriors as you may select.

“My Children—The great Chief of the Warriors when he left this place, directed me to deliver these, and all other prisoners, to the chief of the warriors at this place, Colonel Taylor, who is here by me.

“My Children—Some of the Winnebagoes, south of the Wisconsin river, have befriended the Saukies, and some of the Indians of my agency have also given them aid. This displeaseth the Great Chief of the Warriors and your Great Father the President, and was calculated to do much harm.

“My Children—Your Great Father the President, at Washington, has sent a great war chief from the far east, General Scott, with a fresh army of soldiers. He is now at Rock Island. Your Great Father the President, has sent him and the governor and chief of Illinois to hold a council with the Indians. He has sent a speech to you, and wishes the chief and warriors of the Winnebagoes to go to Rock Island to the council on the 10th of next month. I wish you to be ready in three days, when I will go with you.

“My Children—I am well pleased that you have taken the Black Hawk, the Prophet and other prisoners. This will enable me to say much for you to the Great Chief of the Warriors, and to the President your Great Father. My Chi'dren, I shall now deliver the two men Black Hawk and the Prophet to the chief of the warriors here; he will take care of them till we start to Rock Island.”

Colonel Taylor said:—The great chief of the warriors told me to take the prisoners when you should bring them, and send them to Rock Island to him. I

will take them and keep them safe, but I will use them well, and send them with you and General Street, when you go down to the council, which will be in a few days. Your friend, General Street, advises you to get ready and go down soon, and so do I.

I tell you again I will take the prisoners; I will keep them safe, and I will do them no harm. I will deliver them to the great chief of the warriors, and he will do with them and use them in such manner as shall be ordered by your Great Father the President.

Chaeton, a Winnebago warrior then said to General Street:—

“My Father I am young and do not know how to make speeches. This is the second time I ever spoke to you before people.

“My Father—I am no chief; I am no orator; but I have been allowed to speak to you.

“My Father—If I should not speak as well as others still you must listen to me.

“My Father—When you made the speech to the chiefs Waugh-Kon-Deconi Carramana, the One Eyed Deconi and others the other day, I was there. I heard you. I thought what you said to them, you also said to me. You said, if these two (pointing to Black Hawk and the Prophet) were taken by us and brought to you, there would never more a black cloud hang over your Winnebagoes.

“My Father—Your words entered into my ear, into my brains, and into my heart.

“My Father—I left here that same night, and you know you have not seen me since until now.

“My Father—I have been a great way. I have had much trouble; but when I remembered what you said, I knew what you said was right. This made me continue and do what you told me to do.

“My Father—Near the Dalle, on the Wisconsin, I took Black Hawk. No one did it but me,—I say this in the ears of all present, and they know it—and I now appeal to the Great Spirit, our Grand Father, and the Earth our Grand Mother, for the truth of what I say

“My Father—I am no chief, but what I have done is

for the benefit of my nation, and I hope to see the good that has been promised to us.

“My Father—That one, Wa-bo-kie-shiek (the Prophet) is my relation—if he is to be hurt, I do not wish to see it.

“My Father—Soldiers sometimes stick the end of their guns (bayonets) into the backs of Indian prisoners when they are going about in the hands of the guard. I hope this will not be done to these men.”

Threatened Dissolution of the Union.

In continuing this History, we must notice with unfeigned regret the stand recently taken by the government and people of South Carolina, in opposition to the laws of the general government. The excitement had been great, but the promptitude with which the emergency was met by the President had its due effect.

We insert below, both the Message and the Ordinance. If men may learn lessons of wisdom from the follies of their predecessors, the insertion of these state papers will not be considered either unnecessary or useless.

The legislature re-assembled at Columbia, November 26th, 1832, pursuant to adjournment. On the following day Governor Hamilton made a communication, from which we copy his recommendations for carrying into effect the acts of the convention for nullifying the tariff laws. The governor says:

“Fellow citizens: The die has been at last cast, and South Carolina has at length appealed to her ulterior sovereignty as a member of this confederacy, and placed herself upon her reserved rights. The rightful exercise of this power is not a question which we will any longer argue—it is sufficient that she has willed it; and that the act is done; nor is its strict compatibility with our constitutional obligations to all laws passed by the general government within the authorized grants of power, to be drawn in question, when this interposition is exerted in a case in which the compact has been palpably, deliberately, and dangerously violated. That it brings up a

conjunction of deep and momentous interests, is neither to be concealed nor denied.

* * * * *

“The measure of legislation which you have to employ at this crisis, is the precise amount of such enactments as may be necessary to render it utterly impossible to collect within our limits the duties imposed by protective tariffs thus nullified. That you will resort to such civil and penal provisions as will accomplish this purpose, without unnecessary rigor on the one hand, or a weak and mistaken leniency on the other, I feel so well assured that I shall refrain from entering into a detail of suggestions on a subject on which you are so much better advised than myself; that you should arm every citizen with a civil process, by which he may claim, if he chooses, a restitution of his goods, seized under the existing impost, on giving security to abide the issue of a suit at law; and at the same time define what shall constitute treason against the state; and by a bill of pains and penalties, compel obedience, and punish disobedience to your own laws, are points too obvious to require discussion. In one word, you must survey the whole ground. You must look to and provide for all possible contingencies. In your own limits, your own courts of judicature must not only be supreme, but you must look to the ultimate result of any conflict of jurisdiction and power, between them and the courts of the United States.

“There is one contingency in particular, for which you ought to provide, and that is, in case the collectors of the customs in any of the ports of the state under the instructions of the general government, should refuse to grant clearancy to vessels outward bound, that no injury should accrue to our trade, or to those who may be carrying on friendly commercial intercourse with us, the governor should, under such circumstances, be authorized to grant instantly certificates of clearance, under the seal of the state.

“From these legislative provisions, let me now pass to the consideration of the consequences, I trust, of a remote and improbable occurrence.

“We claim that our remedy is essentially of a pacific

character. When we set up this claim, all we mean to say is, that of right it ought to be, and as far as we are concerned, it shall be so. To the peaceful redress afforded by our courts, in the restitution which they shall decree, and to the ultimate arbitrement of our sister states in a general convention, assembled on the disputed powers, we look with confidence to an adjustment of this painful controversy. But the final issue may be averse to this hope.

"Threats of coercion, we know were once in relation to the probable measures of this state officially promulgated, and public rumor, to which it is not safe for those in charge of the public authorities to be absolutely deaf, has not diminished the conviction that these dispositions may probably be yet entertained. Nor ought we, in a struggle like this, to rely entirely on the confidence that power will not be used because right may be violated.

"We must therefore be prepared for such an alternative.

"I would, therefore, recommend that our militia system, and its laws, undergo a thorough revision. That the Executive be authorized to accept for the defence of Charleston and its dependencies, the services of two thousand volunteers, either by companies or files, as they may volunteer, and that they be formed into four battalions of infantry, with one flank company of riflemen attached to each battalion; one squadron of cavalry, and two battalions, one of field, and the other of heavy artillery; that these corps be organized, in a legionary brigade, and that the Executive, from the precincts in which these volunteers are organized, select the officers of the appropriate rank for the several commands. I suggest the expediency of this brigade being armed and equipped from the public arsenals completely for the field, and that appropriations may be made for supplying all deficiencies in our munitions of war.

"In addition to these volunteer drafts, I deem it safe to recommend that the Executive be authorized also to accept the services of ten thousand volunteers from the other divisions of the state, to be organized and arranged in regiments and brigades, the officers to be selected by

the commander in chief, and that this whole force be called the State Guard.

“Provision should likewise be made for mounting some of our heavy pieces of ordnance, and a fixed and annual appropriation made for the artillery in Charleston, and in other parts of the state, according to their relative expenses.—I have ordered the quarter master general, and the arsenal keeper at Charleston, the latter an experienced officer of artillery, to repair to this place, to attend, in consultation, such committees of your respective bodies, in reference to the condition of their several departments.

“I would moreover, recommend that the President be requested to direct the removal of the United States' troops now in garrison in the state citadel in Charleston, which they now occupy, at the conjoint instance, and request of the state and city authorities, as the accommodations of that post are much wanted for our own arms and munitions. I would also suggest, that after the citadel is thus returned to the state, and the public stores belonging to the state are deposited there, that the magazine guard be removed from the Neck, to garrison this post, and that a daily guard be detached from it to the magazine, and that the guard be augmented to sixty men, and that the appointment of its officers, and general disposition and organization, be under the orders and authority of the commander-in-chief.

I should consider myself, gentlemen, as recreant to my trust, if I did not recommend to you these provisions, or the adoption of those of much wiser import that may suggest themselves to you, and which may be necessary to the public safety and public honour, however improbable the contingency of their ever being required. It is not enough that a people may be right in the struggle for their privileges and liberties, but they must have the means of securing their safety by ample resources, for repelling force by force.

“I cannot, however, but think, that on a calm and dispassionate review by Congress, and the functionaries of the General Government, of the true merits of this controversy, that the arbitration by a call of a convention of all

the States, which we sincerely and anxiously seek and desire, will be accorded to us.

“To resort to force, is at once to prefer a dissolution of the Union to its preservation. South Carolina has declared that she admits of no arbiters but her co-states assembled with her in their sovereign capacity—to deny to her this reference, is to admit that our league has no conservative principle, short of an appeal to the sword—to suppose when one of our most prominent objections to the protective system is its unconstitutionality, that this and the other vexatious and conflicting questions of constitutional power, which now convulse the whole country, are not susceptible of compromise or adjustment in an assembly of equivalent authority to that which formed the constitution, is to affirm that that spirit of amity and justice, without which the Union would be a revolting and compulsory league, is utterly extinct.

“But be this as it may, whatever may be the issue of this unhappy controversy, relying on the intelligence and spirit of a free and gallant people, on the imperishable truth and sacred character of our rights, let us advance with an unfaltering heart and a steady step to the performance of our duty to our country. On your deliberations I fervently invoke the blessings of Almighty God.

J. HAMILTON, Jr.”

“*Columbia, Nov. 27, 1832.*”

“*An Ordinance to nullify certain act of the Congress of the United States, purporting to be laws laying duties and imposts on the importation of foreign commodities.*

“Whereas, the Congress of the United States, by various acts, purporting to be acts laying duties and imposts on foreign imports, but in reality intended for the protection of domestic manufactures and the giving of bounties to classes and individuals engaged in particular employments, at the expense and to the injury and oppression, of other classes and individuals, and by wholly exempting from taxation certain foreign commodities, such as are not produced or manufactured in the United States, to afford a pretext for imposing higher and exces-

sive duties on articles similar to those intended to be protected, hath exceeded its just powers under the constitution, which confers on it no authority to afford such protection, and hath violated the true meaning and intent of the constitution, which provides for equity in imposing the burdens of taxation upon the several states and portions of the confederacy. And, whereas the said Congress, exceeding its just power to impose taxes and collect revenue, for the purpose of effecting and accomplishing the specific objects and purposes which the constitution of the United States authorizes it to effect and accomplish, hath raised and collected unnecessary revenue, for objects unauthorized by the constitution :

“ We, therefore, the People of the State of South Carolina in Convention assembled, do declare and ordain, and it is hereby declared and ordained, that the several acts and parts of acts of the Congress of the United States, purporting to be laws for the imposing of duties and imposts on the importation of foreign commodities, and now having actual operation and effect within the United States, and more especially an act entitled “an act in alteration of the several acts imposing duties on imports,” approved on the nineteenth day of May, one thousand eight-hundred and twenty-eight; and also an act entitled “an act to alter and amend the several acts imposing duties on imports,” approved on the fourteenth day of July, one thousand eight hundred and thirty-two are unauthorized by the Constitution of the United States, and violate the true meaning and intent thereof, and are null, void, and no law, nor binding upon this State, its officers, or citizens; and all promises, contracts, and obligations, made or entered into, or to be made, or entered into, with purpose to secure the duties imposed by the said acts, and all judicial proceedings which shall be hereafter had in affirmance thereof, are, and shall be held utterly null and void :

“ And it is further ordained, that it shall be lawful for any of the constituted authorities, whether of this State or the United States, to enforce the payment of duties imposed by the said acts within the limits of this State; but that it shall be the duty of the Legislature to adopt

such measures, and pass such acts, as may be necessary to give full effect to this ordinance, and to prevent the enforcement, and arrest the operation, of the said acts and parts of acts of the Congress of the United States within the limits of this State, from and after the first day of February next, and the duty of all other constituted authorities, and of all persons residing or being within the limits of this State, and they are hereby required and enjoined to obey and give effect to this Ordinance and such acts and measures of the Legislature, as may be passed or adopted in obedience thereto:

“ And it is further ordained, that in no case of law or equity, decided in the Courts of this State, wherein shall be drawn in question the authority of this Ordinance, or the validity of such act or acts of the Legislature as may be passed, for the purpose of giving effect thereto, or the validity of the aforesaid acts of Congress, imposing duties, shall any appeal be taken or allowed to the Supreme Court of the United States, nor shall any copy of the record be permitted or allowed for that purpose; and if any such appeal shall be attempted to be taken, the Courts of this State shall proceed to execute and enforce their judgments, according to the laws and usages of the State, without reference to such attempted appeal, and the person or persons attempting to take such appeal may be dealt with as for a contempt of the Court.

“ And it is further ordained, That all persons now holding any office of honour, profit, or trust, civil or military, under this State (members of the Legislature shall prescribe, take an oath, well and truly to obey, execute, and enforce this Ordinance, and such act or acts of the Legislature as may be passed in pursuance thereof, according to the true intent and meaning of the same, and on the neglect or omission of any such person or persons so to do this, their office or offices shall be forthwith vacated, and shall be filled up as if such person or persons were dead, or had resigned, and no person hereafter elected to any office of honour, profit or trust, civil or military (members of the Legislature excepted,) shall, until the Legislature shall otherwise provide and direct, enter on the execution of his office, or be in any respect

competent to the duties thereof, until he shall, in like manner, have taken a similar oath; and no jury shall be impannelled in any of the Courts of this State, in any cause in which shall be in question this Ordinance, or any act of the Legislature passed in pursuance thereof, unless he shall first, in addition to the usual oath, have taken an oath that he will well and truly obey, execute, and enforce, this Ordinance, and such act or acts of the Legislature as may be passed to carry the same into operation and effect, according to the true intent and meaning thereof:

“And we, the people of South Carolina, to the end, that it may be fully understood by the Government of the United States, and the people of the co-States, that we are determined to maintain this, our ordinance and declaration, at every hazard, do further declare, that we will not submit to the application of force, on the part of the Federal Government, to reduce this State to obedience; but that we will consider the passage, by Congress, of any act, authorizing the employment of military or naval force against the State of South Carolina, her constituted authorities or citizens; or any act abolishing or closing the ports of this State or any of them, or otherwise obstructing the free ingress and egress of vessels, to and from the said ports; or any other act on the part of the Federal Government, to coerce the State, shut up her ports, destroy or harass her commerce, or to enforce the acts hereby declared to be null and void, otherwise than through the civil tribunals of the country, as inconsistent with the longer continuance of South Carolina in the Union; and that the people of this State will thenceforth hold themselves absolved from all further obligation to maintain or preserve their political connexion with the people of the other States, and will forthwith proceed to organize a separate government; and do all other acts and things, which sovereign and independent States may of right do.”

These measures and movements on the part of South Carolina, were promptly met by a proclamation from the president of the United States, setting forth his views of the nature of the federal compact, the powers and duties of the general government under the constitution in relation to the existing difficulties, and the determination of the executive, to exercise those powers to their full extent, in enforcing the laws thus nullified and in maintaining the authority thus denied and contemned. Perhaps no document has emanated from the executive department of the government, which has been more generally approved, both in regard to the style in which it was written, and the doctrines it asserted and maintained, since the farewell address of the first president. There are no speculative opinions advanced, no new theories proposed; it speaks the facts of history in the language of the constitution, and in the spirit which we of a later generation may suppose animated its framers. The limits of our volume forbid the insertion of the document entire, and we must therefore be content with giving a brief summary.

The proclamation inculcates that the constitution of the United States is founded in compact—that this compact derives its obligation from the agreement entered into by the people of each of the states, in their political capacity, with the people of the other states—that the constitution, which is the offspring of this compact, has its sanction in the ratification of the people of the several states, acting in the capacity of separate communities—that the majority of the people of the United States, in the aggregate, have no power to alter the constitution, but that change or amendment can only be proposed in the mode pointed out in the constitution, and can never become obligatory unless ratified by the people of three-fourths of the states through their respective legislatures or state conventions—that inasmuch as the sovereign power of the people in each state has imparted to the constitution of the United States, and the laws made in pursuance thereof, paramount obligation over state legislation, or any constitution or form of state government which may be instituted by the people of such state, and inasmuch as the people of each state have bound them-

selves by compact with the rest, to abide by this paramount authority, until changed according to the provisions of the constitution so declared to be paramount. no constitution, law or ordinance of any one state is valid to defeat the constitution and laws of the United States or to sever the mutual obligations which bind the states together—that in the case of a violation of the constitution of the United States, and the usurpation of powers not granted by it, on the part of the functionaries of the general government, the state governments have a right to interpose to arrest the evil, upon the principles which were set forth in the Virginia resolutions of 1798, against the alien and sedition laws—and finally that in extreme cases of oppression (every constitutional mode of redress having been sought in vain) the right resides with the people of the several states, to organize resistance against such oppression, confiding in a good cause, the favor of heaven, and the spirit of freemen, to vindicate the right.

Such were the doctrines of the proclamation, and the talented, the wise and the patriotic of every name and party came unitedly forward to sustain them. South Carolina had never made the attempt in the obvious and constitutional mode of obtaining the sense of the other states on the construction of the federal compact, and amending it if necessary; and now she was compelled to shrink before the mighty force of popular opinion. Most happily, the storm passed away gradually as it had arisen—no resistance was actually made to the enforcement of the laws they had nullified, and consequently no coercive measures were necessary on the part of the general government, to maintain its authority—the objectionable laws were somewhat modified, and South Carolina, though she has steadfastly adhered to her theories, has rested since apparently satisfied with the compromise.

CHAPTER XXII.

President Jackson's Second Term.

ON the 4th of March, 1833, Andrew Jackson was a second time inducted into office as president of the United States, and Martin Van Buren, of New York was at the same time declared elected vice president. The contest which had thus resulted, was perhaps the warmest, and in some sections of the country, the most bitter of any since the organization of the government. In his first message to congress in 1829, president Jackson had called the attention of that body to the fact, that the charter of the bank of the United States would soon expire, and the question of the expediency of re-chartering this, or of chartering any other similar institution, began at once to be agitated in and out of congress. The people speedily joined issue for or against the measure and but a few months elapsed before it became the principal dividing line between the two great political parties of the country, the administration and its friends in opposition to the bank or any national bank, while the national republican (since whig) party as warmly contended for the expediency and necessity of some institution of the kind. The subject was presented to congress from time to time by both parties, and was discussed in both branches of that body in a multiplied variety of forms, during almost the entire of two sessions, while the country through the medium of the press, was agitated from one extremity to the other. At length, in the spring of 1832, a bill passed both houses of congress re-chartering the bank of the United States, with some new modifications and restrictions, in addition to an alteration of those contained in the old charter.

This bill was vetoed by the president. "In his message, returning that act,"—(we quote the language of a subsequent executive document)—" he repeated and enlarged

upon the principles and views briefly asserted in his annual messages, declaring the bank to be, in his opinion, both inexpedient and unconstitutional, and announcing to his countrymen, very unequivocally, his firm determination never to sanction, by his approval, the continuance of that institution, or the establishment of any other upon similar principles."

The veto message was given to congress and the people, a few months only before that people were to be called on for an expression of their opinions with reference to the principles and policy of the administration, by their votes for or against the re-election of president Jackson; and in that message he most clearly intimated his wish that such reference might be had to the bank question in the election, as that in the result might be had a decision of the people upon that question and upon the propriety or impolicy of his course. In the concluding paragraph of that message he said—"I have now done my duty to my country. If sustained by my fellow citizens, I shall be grateful and happy; if not, I shall find in the motives which impel me, ample grounds for contentment and peace." Whatever may be the opinion of the reader as to the correctness of the opinions or the purity of the motives of the president, all must admit that in the result, he found himself sustained by a very large portion of the American people—a larger majority of the electoral votes having been given for Jackson and Van Buren, than had been given to the successful candidates in any contested election which had preceded it.

Early in June, the president, accompanied by Mr. Woodbury, secretary of the navy, Mr. Cass, secretary of war, Mr. M'Lean, of the state department, Mr. Donaldson, his private secretary, and other distinguished gentlemen, commenced his tour through the eastern states. He was received and welcomed in every city, town and village through which he passed, with the most marked attention, and in a manner which could not but have been extremely gratifying to himself, and the pomp and pageantry which marked the passage of general Lafayette through the United States in 1824, was even excelled in some cities on this occasion. A feeling of

enthusiasm seemed to pervade all classes alike—none looked on with coldness or indifference, but on the contrary there seemed to be one thought and one purpose in the community, to render honor to the man who had filled the highest military and civil offices under the government. He visited Baltimore, Philadelphia, New York, Hartford, Boston and other places as far east as Concord, N. H., and at each successive stage of his journey, manifestations of respect seemed accumulating as if each were striving to excel the other, in their attentions and display. He had intended to visit Portland and some other places, but ill health occasioned an abrupt termination of his journey, and he arrived at Washington early in July.

CHAPTER XXIII.

Congressional Session, 1833-4.—National Condition and Resources.—The Public Lands.

CONGRESS assembled on the day designated by the constitution, and the message of the president to that body, affords a more clear and distinct history of our national affairs at home and abroad, than we could give in our own language. Of our foreign relations, he says:—

“Our condition abroad is no less honorable than it is prosperous at home. Seeking nothing that is not right, and determining to submit to nothing that is wrong, but desiring honest friendships and liberal intercourse with all nations, the United States have gained throughout the world the confidence and respect which are due to policy so just and so congenial to the character of the American people, and to the spirit of their institutions.”

On finance, he says—“The receipts into the treasury during the present year will amount to more than thirty-two millions of dollars. The revenue derived from customs, will, it is believed be more than twenty-eight mi

ions, and the public lands will yield about three millions. The expenditures within the year for all objects, including two millions, five hundred seventy-two thousand two hundred and forty dollars on account of the public debt, will not amount to twenty-five millions; and a large balance will remain in the treasury after satisfying all the appropriations chargeable on the revenue for the present year."

After some particulars and remarks on the prospect of the speedy extinguishment of the public debt, the subject of the United States bank and the removal of the deposits is next treated of, and the matters already given are concisely repeated, in calling the attention of congress to the subject.

Of our Indian relations, he says—"Our relations with the various Indian tribes have been undisturbed since the termination of the difficulties growing out of the hostile aggressions of the Sacs and Fox Indians. Several treaties have been formed for the relinquishment of territory to the United States, and for the migration of the occupants to the region assigned for their residence west of the Mississippi." * * * * "That these tribes cannot exist, surrounded by our settlements, and in continual contact with our citizens, is certain. They have neither the intelligence, the industry, the moral habits, nor the desire of improvement, which are essential to any favorable change of their condition. Established in the midst of another and a superior race, and without appreciating the causes of their inferiority or seeking to control them, they must necessarily yield to the force of circumstances and ere long disappear."

The following extracts from the report of the secretary of the navy, embody the principal matters of interest contained in that document:—

"The whole number of naval officers at this time, including those under warrants as well as commissions, is about one thousand; and our whole annual expenses, of every kind, for their maintenance, is about eight hundred fifty thousand dollars, or, on an average, about eight hundred and fifty dollars for each officer. These expenses have not been increased during the last ten years, except

what has been caused by the addition before mentioned to the numbers of some classes of officers, and the augmentation of pay in 1827, to passed midshipmen, in 1828, to surgeons and their assistants, and in 1830, to lieutenants. In the mean time, of late years, more useless officers have been placed on half pay, and some large allowances reduced. But no further essential reduction in these particulars can, in my opinion, be effected without injury either to individual officers, or to the naval service.

“ The whole number of seamen in the navy, including all the different grades, does not vary much from five thousand; and the annual expenses of their pay, rations, and enlistment, are not far from one million, one hundred and thirty thousand dollars, or, on an average, about two hundred twenty-six dollars for each seaman. These expenses are small, and indicate great popularity in the service when we advert not only to our facility in obtaining good seamen, but to the high rate of wages the past year in merchant vessels, and to the great cost of this class of persons in the navies of some countries, where labor is generally much lower than in the United States. These expenses have not been increased the last ten years, except by augmentation of about one-third in the whole number of seamen, arising chiefly from an increase of our force in commission. The complement of men to each vessel might advantageously, in some respects, be lessened, and the whole expenses on account of them be thus reduced, were it not considered of vital importance in so small a navy to have all our ships afloat as perfect as possible in every particular conducive to their efficacy, and to the reputation of the government. It is expected that a laudable pride will then be felt and encouraged by all connected with the service, on a comparison of the condition of our own ships with those of other nations, and that the moral force of our navy—as a model for a larger one when wanted—as likely to vindicate its country's rights and honor in war, and protect its commerce in peace, will always be much greater with a small number of vessels afloat, built of the best materials and in the best manner, supplied with

the most approved equipments, commanded by well-educated and well-disciplined officers, and navigated by full crews of hardy and contented seamen, with the whole ready on any emergency for immediate and efficient action—than with double the number of vessels half-manned, and in other respects defectively provided. Every improvement in our materials, whether timber, cordage or cannon—in our yards, docks or harbors—in our hospitals or asylums—will add strength to their moral force, and better prepare us for any future conflict in which the violence or injustice of other nations may involve us.

“ On a review of the entire personal branch of our naval establishment, it will be seen that its annual cost, not including the marine corps, is about two millions of dollars ; and, of that sum, about one million, nine hundred and sixty-four thousand dollars is an annual charge on the public treasury.

“ On a review of the whole affairs of this department, it appears that its expenditures on all naval subjects, the past year, have been somewhat less than four millions of dollars. It will be seen how this result compares with former periods, by adverting to the fact, that during the last twenty years, these expenditures, except during five years of that time, have never fallen so low as three millions of dollars ; and except during six years of that time, have never exceeded four millions of dollars.

“ The whole estimates made the past year, for the general wants of what is technically considered the navy, were only three millions, one hundred seventy-six thousand, seven hundred and sixty-six dollars. Those for the year previous were three millions, two hundred twenty-seven thousand, two hundred and eighty-eight dollars. Those for the present year are three millions, two hundred ninety-two thousand, two hundred and twenty-four dollars. But it is to be remembered that, under the head of naval expenditures, besides what is paid from the amount voted on the annual naval estimates, it is customary to class what is paid from half a million appropriated for a term of years to gradual improvements, almost two hundred thousand dollars for the marine corps ; the payment from the navy pension, hospital, and

privateer pension funds, and several miscellaneous sums voted by congress on motions, resolutions and petitions; and part of which sums, though charged under this head, have little or no concern with our naval establishment. On the contrary, some of the expenses connected with the administration of the department, at this place, are included in the general appropriation bills for the support of government, and are not usually classed under the head of naval expenditures."

The report of the secretary of war, gives some interesting facts in relation to Indian affairs and the pension fund, which are subjoined:—

"In regard to our Indian relations, it is stated that our treaty with the Chickasaws has terminated all difficulties with that tribe, and an exploring party are about commencing their journey to select a residence west of the Mississippi. The obligations assumed by the United States, in the treaty with the Choctaws, for the removal of those Indians, have been fulfilled; about fifteen thousand of the tribe have been removed, while a party of from fifteen hundred to three thousand have changed their usual residence in Alabama, and have declined accompanying the other Indians in their emigration. The result of the last instructions to ascertain the wishes of the Creeks in Alabama, in regard to a removal, has not been received. The Sacs and Foxes have removed to the region assigned to them, and the Winnebagoes have retired across the Mississippi, to their lands north of the Ouisconsin. Treaties have been formed with the Pottawatamies, Chippewas and Ottawas, claiming the district on the west side of lake Michigan, south of Green bay, and north of Chicago, for its cession to the United States, and with the Pottawatamies of the peninsula of Michigan, for the relinquishment of their reservation south of Grand river. With the exception of the Miamies, in the state of Indiana, of a band of Wyandotts at Upper Sandusky, in Ohio, and of scattered portions of the Ottawas and Chippewas in the peninsula of Michigan, north of Grand river, and of Saganaw bay, probably not exceeding altogether five thousand individuals, the coun-

try north of the Ohio and east of the Mississippi, including the states of Ohio, Indiana and Illinois, and the territory of Michigan, as far as the Fox and Ouisconsin rivers, has been cleared of the embarrassments of Indian relations. The Cherokees occupying portions of land in Georgia, Alabama, North Carolina and Tennessee and probably not exceeding eleven thousand, are the only Indians, south of the Ohio and east of the Mississippi with whom an arrangement has not been made, either for emigration, or for a change of political relation.

The commissioners west of the Mississippi, having formed treaties with the Creeks, the Cherokees, the Senecas and Shawanees, the Quapas and the Seminoles of Florida, will now turn their attention to forming a practical plan for regulating the intercourse of the various tribes with one another, and with the United States and for the establishment of some general principles, by which their own internal government can be safely administered by themselves, and a general superintending authority exercised by the United States, so far as it may be considered necessary.

There have been presented for allowance under the pension act of June 6th, 1832, thirty thousand six hundred and sixty claims. The whole of these have been examined, and either admitted, rejected, or returned to the parties for supplementary action. Twenty-three thousand four hundred and thirty-eight certificates have been issued; one thousand one hundred and eleven claims have been rejected; three thousand returned cases are in the office awaiting or undergoing re-examination; thirteen hundred and fifty-one of which are incomplete in their proofs are suspended until these are furnished, and four thousand four hundred and twenty-five are in the hands of the parties for additional evidence, or authentication, or *in transitu* between them and the office.'

A summary, showing the condition of the national finances, has already been quoted from the president's message. The following statistics from the report of the secretary of the treasury, will, however, be interesting.

The receipts into the treasury, from all sources, during the year 1831, were	\$28,526,820 82
The expenditures of the same year, including payments on account of the public debt, were	30,038,446 12
The balance in the treasury on 1st January, 1832, was .	4,502,914 45
The receipts, from all sources, during the year 1832, were	31,865,561 16
Viz.—Customs	28,465,237 21
Lands	2,623,331 10
Dividends on bank stock	490,000 00
Sales of stocks in the bank of the United States	169,000 00
Incidental receipts	117,942 89
Making with the balance an aggregate of	36,368,475 61
The expenditures of the same year were	34,356,698 06
Viz.—Civil list, foreign intercourse, and miscellaneous, Military services, including fortifications, ordnance, Indian affairs, pensions, arming the militia, and internal improvements	4,577,141 45
Naval service, including the gradual improvement of the navy	7,982,877 03
Public debt	3,956,370 29
	17,840,309 29
Leaving a balance in the treasury on the 1st of January, 1833, of	\$2,011,777 55

“The value of the exports of the year ending on the 30th of September last, is estimated at \$90,663,403, of which \$70,642,030, were of domestic, and \$20,021,373 of foreign articles, showing an increase in the exports of domestic produce of \$7,504,560 over the exports of the same character for the year ending 30th September, 1832, and a diminution in foreign articles of \$4,018,100. The value of imports for the year ending on the 30th September last, is estimated at \$109,000,000, being greater by the sum of \$8,000,000, than the imports of the year ending 30th September, 1832. Of the imports for the year ending 30th September last, it is estimated that \$34,000,000, were in articles free from duty.”

The ratio of representation having been changed at the previous sessions, we here insert a table which will show the representation in congress, in each state of the union, from the organization of the government up to the present time, with the several ratios of representation, as also the number of electors to be chosen in 1836.

STATES.	1787 Ratio 30,000	'98 Ratio 33,000	'03 Ratio 33,000	'13 Ratio 35,000	'23 Ratio 40,000	'33 Ratio 47,000	'36 No. of Electors

The disposition to be made of the proceeds of the public lands, was a subject which had agitated congress for several years, and had attracted a large share of the public attention, particularly in the western states. Numerous projects had been discussed, all however tending to one point—the granting to the new states which comprised most of these lands an increased portion of the proceeds of their sale. A bill to this effect, originated in the senate by Mr. Clay, of Kentucky, had passed both houses of congress at a late day of the previous session and on the second day of the present session was returned with the reasons for withholding the executive signature. The manner in which these lands had been originally obtained to the general government, the conditions on which most of them had been ceded by the states in

their individual capacity to the United States collectively, and the purposes for which the cession had been made, are set forth in the veto message, in a luminous and forcible manner, and afford a record of facts connected with our past and present history which should not be forgotten.

The disposition to be made of the waste lands within the limits of the United States, had constituted an important obstacle to the organization of any government, and as early as 1777, the subject had been discussed and finally waived by a mutual concession of interest and opinion, while congress were framing the articles of confederation. These lands were claimed by certain of the states whose western boundary was asserted to be the Mississippi, or the South sea, of which number were New York, Virginia, the Carolinas, and Georgia, while other of the states seemed disposed to deny this claim, or at least desirous of considering these waste lands as the common property of the United States. The articles of confederation were acceded to by all the states except Maryland, who withheld her assent at that time from reasons connected with the subject of these waste lands, while some other of the states in signing the articles made an express reservation that their claim to those lands was not thereby abandoned.

In 1780, New York tendered a cession to the United States of the claims to their western territory. In the preamble to this act, it is declared:—

“And whereas, the articles of confederation and perpetual union recommended by the honorable congress of the United States of America have not proved acceptable to all the states, it having been conceived that a portion of the waste and uncultivated territory within the limits or claims of certain states, ought to be appropriated as a common fund for the expense of the war, and the people of the state of New York, being on all occasions disposed to manifest their regard for their sister states, and their earnest desire to promote the general interest and security, and more especially to accelerate the federal alliance,” &c.

Virginia continued to remonstrate against this policy

though at this time several of the other states approved t. The representations of these several states were referred to a committee of congress and on the 10th of October, 1780, a resolution was adopted by that body, pledging the faith of the United States to the several states, that the unappropriated lands which might be relinquished to the United States, "should be disposed of for the common benefit of the United States," &c. The difficulty being thus removed, the delegates in congress from Maryland, instructed by the legislature of that state, signed the articles of confederation, on the 1st of March 1781, and the federal union, under that compact was then first complete. The deed of cession from New York was executed on the same day that the articles of confederation were ratified; and it was accepted by congress, in October, 1782. The Virginia deed of cession was executed and accepted on the 1st of March, 1784. One of the conditions of that cession is as follows, viz.—

"That all the lands within the territory so ceded to the United States, and not reserved for or appropriated to any of the before-mentioned purposes, or disposed of in bounties to the officers and soldiers of the American army, shall be considered as a common fund for the use and benefit of such of the United States as have become or shall become members of the confederation or federal alliance of the said states, Virginia inclusive, according to their usual respective proportions in the general charge and expenditure, and shall be faithfully and *bona fide* disposed of for that purpose, and for no other use or purpose whatsoever."

Similar conditions were affixed to the deeds of cession executed by New York, in 1781; by Massachusetts, in 1785; by Connecticut, in 1786; by South Carolina, in 1787; by North Carolina, in 1789; and by Georgia, in 1802. These grants completed the title of the United States to all those lands, generally called *public lands*, lying within the original limits of the confederacy. Those which have been acquired by the purchase of Louisiana and Florida, having been paid for out of the common treasure of the United States, are of course their

common property. These facts collected from the early history of our republic show that the subject of the public lands entered into the elements of its institution. It was only upon the condition that those lands should be considered as common property, to be disposed of for the benefit of the United States, that some of the states agreed to come into a "perpetual union." The states claiming those lands acceded to those views, and transferred their claims to the United States upon certain specific conditions, and on those conditions the grants were accepted. "These solemn compacts," says the message, "invited by congress in a resolution declaring the purposes to which the proceeds of those lands should be applied, originated before the constitution, and forming the basis on which it was made, bound the United States to a particular course of policy in relation to them, by ties as strong as can be invented to secure the faith of nations."

To secure to the United States government forever the power to execute these compacts in good faith, congress in 1787, in the articles of compact between the original states and the people and states of the territory north-west of the Ohio river, prescribed a condition that—
'The legislatures of those districts or new states shall never interfere with the primary disposal of the soil by the United States in congress assembled, nor with any regulation congress may find necessary for securing the title in such soil to the *bona fide* purchasers.'" This condition has been exacted from the people of all the new territories; and each new state, carved out of the public domain, has been required explicitly to recognise it as one of the conditions of admission into the union.

"With such care"—says the message—"have the United States reserved to themselves, in all their acts down to this day—in legislating for the territories and admitting states into the Union—the unshackled power to execute in good faith the compacts of cession made with the original states. From these facts and proceedings it plainly and certainly results, 1st, That one of the fundamental principles on which the confederation of the United States was originally based, was that the

waste land of the West within their limits, should be the common property of the United States. 2d, That those lands were ceded to the United States by the states which claimed them, and the cessions were accepted, on the express condition that they should be disposed of for the *common* benefit of the states, according to their respective proportions in the general charge and expenditure, and for no other purpose whatsoever."

The bill in congress of which we have before spoken, contemplated the payment of a certain per centage of the proceeds of the public lands, to certain of the states, in addition to what they would be entitled to "according to their respective proportions in the general charge and expenditure," which per centage was to be taken from the nett proceeds. "Waiving all considerations of equity or policy," says the message—"in regard to this provision, what more need be said to demonstrate its objectionable character than that it is indirect and undisguised violation of the pledge given by congress to the states before a single cession was made; that it abrogates the condition upon which some of the states came into the union; and that it sets at nought the terms of cession spread upon the face of every grant under which the title to that portion of the public lands is held by the federal government."

CHAPTER XXIV.

Session of congress, 1834-5.—Foreign Relations.—The French Treaty.—State of the Finances.—Report of the Secretary of the Navy.—Indian Affairs.—Sketch of the Life of Lafayette.

THE meeting of congress on the first Monday in December, 1834, was marked by little of the excitement which existed at the commencement of the former session. The bank question seemed to be considered as

settled against the re-charter, and the success of the experiment of collecting, keeping and disbursing the public moneys through the agency of the local banks, apparently equalled the expectations of the friends of that measure. Our foreign relations had, however, during the recess of congress assumed an interesting aspect, particularly in relation to the French government. In the death of the talented, the patriotic, the good Lafayette, which event transpired on the 20th of May, 1834, the American people had lost a faithful and efficient defender of their rights and interests. How far that event might have operated to induce the present difficulty, we cannot here speak, though it is probable he had been in this, as in all other matters in which the United States had any interest, their firm friend, and the fear of his influence with the people of France might have been an important check on any intended injustice of the French government. The circumstances of this difficulty so far as they had yet transpired, as also the state of our relations with other governments and countries, we extract from the president's message.

"Our foreign relations continue, with but few exceptions, to maintain the favorable aspect which they bore in my last annual message, and promise to extend those advantages which the principles that regulate our intercourse with other nations are so well calculated to secure.

The question of the northeastern boundary is still pending with Great Britain, and the proposition made in accordance with the resolution of the senate for the establishment of a line according to the treaty of 1783, has not been accepted by that government."

* * * * *

"With the governments of Austria, Russia, Prussia, Holland, Sweden and Denmark, the best understanding exists. Commerce, with all, is fostered and protected by reciprocal good will, under the sanction of liberal, conventional, or legal provisions.

In the midst of her internal difficulties, the queen of Spain has ratified the convention for the payment of the claims of our citizens arising since 1819. It is in the

course of execution on her part, and a copy of it is now laid before you for such legislation as may be found necessary to enable those interested to derive the benefits of it."

* * * * *

"The treaty of amity and commerce between the United States and Belgium, brought to your notice in my last annual message, as sanctioned by the senate, but the ratifications of which had not been exchanged, owing to a delay in its reception at Brussels, and a subsequent absence of the Belgian minister of foreign affairs, has been, after mature deliberation, finally disavowed by that government as inconsistent with the powers and instructions given to the minister who negotiated it. This disavowal was entirely unexpected, as the liberal principles embodied in the convention, and which form the groundwork of the objections to it, were perfectly satisfactory to the Belgian representative, and were supposed to be not only within the powers granted, but expressly conformable to the instructions given to him. An offer, not yet accepted, has been made by Belgium to renew negotiations for a treaty less liberal in its provisions, on questions of general maritime law.

Our newly established relations with the sublime porte promise to be useful to our commerce and satisfactory in every respect to this government. Our intercourse with the Barbary powers continues without important change, except that the present political state of Algiers has induced me to terminate the residence there of a salaried consul, and to substitute an ordinary consulate, to remain so long as the place continues in the possession of France. Our first treaty with one of these powers—the emperor of Morocco—was formed in 1786, and was limited to fifty years. That period has almost expired. I shall take measures to renew it with the greater satisfaction, as its stipulations are just and liberal, and have been, with mutual fidelity and reciprocal advantage, scrupulously fulfilled."

* * * * *

From the Argentine republic, from which a minister was expected to this government, nothing further has

been heard. Occasion has been taken, in the departure of a new consul to Buenos Ayres, to remind that government, that its long-delayed minister, whose appointment had been made known to us, had not arrived.

"It becomes my unpleasant duty to inform you that this pacific and highly gratifying picture of our foreign relations, does not include those with France at this time. It is not possible that any government and people could be more sincerely desirous of conciliating a just and friendly intercourse with another nation, than are those of the United States with their ancient ally and friend. This disposition is founded as well on the most grateful and honorable recollections associated with our struggle for independence, as upon a well-grounded conviction that it is consonant with the true policy of both. The people of the United States could not, therefore, see without the deepest regret, even a temporary interruption of the friendly relations between the two countries—a regret which would, I am sure, be greatly aggravated if there should turn out to be any reasonable ground for attributing such a result to any act of omission or commission on our part. I derive, therefore, the highest satisfaction from being able to assure you that the whole course of this government has been characterised by a spirit so conciliatory and forbearing as to make it impossible that our justice and moderation should be questioned, whatever may be the consequences of a longer perseverance on the part of the French government in her omission to satisfy the conceded claims of our citizens.

"The history of the accumulated and unprovoked aggressions upon our commerce, committed by authority of the existing governments of France, between the years 1800 and 1817, has been rendered too painfully familiar to Americans to make its repetition either necessary or desirable. It will be sufficient here to remark, that there has, for many years, been scarcely a single administration of the French government by whom the justice and legality of the claims of our citizens to indemnification, were not, to a very considerable extent, admitted; and

yet, near a quarter of a century has been wasted in ineffectual negotiations to secure it.

“Deeply sensible of the injurious effects resulting from this state of things upon the interest and character of both nations, I regarded it as among my first duties to cause one more effort to be made to satisfy France, that a just and liberal settlement of our claims was as well due to her own honor as to their incontestible validity. The negotiation for this purpose was commenced with the late government of France, and was prosecuted with such success, as to leave no reasonable ground to doubt that a settlement of a character quite as liberal as that which was subsequently made, would have been effected, had not the revolution, by which the negotiation was cut off, taken place. The discussions were resumed with the present government, and the result showed that we were not wrong in supposing, that an event by which the two governments were made to approach each other so much nearer in their political principles, and by which the motives for the most liberal and friendly intercourse were so greatly multiplied, could exercise no other than a salutary influence upon the negotiation.

“After the most deliberate and thorough examination of the whole subject, a treaty between the two governments was concluded and signed at Paris, on the 4th of July, 1831, by which it was stipulated that ‘the French government, in order to liberate itself from all the reclamations preferred against it by the citizens of the United States for unlawful seizures, captures, sequestrations, confiscations, or destruction of their vessels, cargoes, or other property, engages to pay a sum of twenty-five millions of francs to the United States, who shall distribute it among those entitled, in the manner and according to the rule it shall determine;’ and it was also stipulated on the part of the French government, that this twenty-five millions of francs should ‘be paid at Paris in six annual instalments of four millions one hundred and sixty-six thousand six hundred and sixty-six francs and sixty-six centimes each, into the hands of such person or persons as shall be authorized by the government of the United States to receive it.’ The first

instalment to be paid 'at the expiration of one year next following the exchange of the ratifications of this convention, and the others at successive intervals of a year, one after another, till the whole shall be paid. To the amount of each instalment shall be added interest at four per centum thereupon, as upon the other instalments then remaining unpaid, the said interest to be computed from the day of the exchange of the present convention.'

"It was also stipulated on the part of the United States, for the purpose of being completely liberated from all the reclamations presented by France on behalf of its citizens, that the sum of one million five hundred thousand francs should be paid to the government of France, in six annual instalments, to be deducted out of the annual sums which France had agreed to pay, interest thereupon being in like manner computed from the day of the exchange of the ratifications. In addition to this stipulation, important advantages were secured to France, by the following article, viz. 'The wines of France, from and after the exchange of the ratifications of the present convention, shall be admitted to consumption in the states of the union, at duties which shall not exceed the following rates by the gallon, (such as is used at present for wines in the United States) to wit: six cents for red wines in casks; ten cents for white wines in casks; and twenty-two cents for wine of all sorts in bottles. The proportion existing between the duties on French wines thus reduced, and the general rates of the tariff which went into operation the 1st January, 1829, shall be maintained in case the government of the United States should think proper to diminish those general rates in a new tariff.

'In consideration of this stipulation, which shall be binding on the United States for ten years, the French government abandons the reclamations which it had formed in relation to the eighth article of the treaty of cession of Louisiana. It engages, moreover, to establish on the long staple cotton of the United States, which, after the exchange of the ratifications of the present convention, shall be brought directly thence to France by the vessels of the United States or French vessels, the same duties as on short staple cottons.

“ This treaty was duly ratified in the manner prescribed by the constitutions of both countries, and the ratification was exchanged at the city of Washington, on the 2d of February, 1832. On account of its commercial stipulations it was in five days thereafter laid before the congress of the United States, which proceeded to enact such laws favorable to the commerce of France as were necessary to carry it into full execution, and France has from that period to the present, been in the unrestricted enjoyment of the valuable privileges that were thus secured to her. The faith of the French nation having been thus solemnly pledged through its constitutional organ, for the liquidation and ultimate payment of the long-deferred claims of our citizens, as also for the adjustment of other points of great and reciprocal benefits to both countries, and the United States having with a fidelity and promptitude by which their conduct will, I trust, be always characterised, done every thing that was necessary to carry the treaty into full and fair effect on their part, counted with the most perfect confidence on equal fidelity and promptitude on part of the French government.

“ In this reasonable expectation we have been, I regret to inform you, wholly disappointed. No legislative provision has been made by France for the execution of the treaty either as it respects the indemnity to be paid, or the commercial benefits to be secured to the United States, and the relations between the United States and that power in consequence thereof are placed in a situation threatening to interrupt the good understanding which has so long and so happily existed between the two nations.

“ Not only has the French government been thus wanting in the performance of the stipulations it has solemnly entered into with the United States, but its omissions have been marked by circumstances which would seem to leave us without satisfactory evidences, that such performance will certainly take place at a future period. Advice of the exchange of ratifications reached Paris prior to the 8th of April, 1832. The French chambers were then sitting and continued in session until the 21st

of that month, and although one instalment of the indemnity was payable on the 2d February, 1833, one year after the exchange of ratifications, no application was made to the chambers for the required appropriation, and in consequence of no appropriation having then been made, the draft of the United States government for that instalment was dishonored by the minister of finance, and the United States thereby involved in much controversy. The next session of the chambers commenced on the 19th November, 1832, and continued until the 25th April, 1833.

“Notwithstanding the omission to pay the first instalment had been made the subject of earnest remonstrance on our part, the treaty with the United States and a bill making the necessary appropriations to execute it were not laid before the chamber of deputies until the 6th of April, nearly six months after its meeting, and only nineteen days before the close of the session. The bill was read and referred to a committee, but there was no farther action upon it. The next session of the chambers commenced on the 26th of April, 1833, and continued until the 26th of June following. A new bill was introduced on the 11th of June, but nothing important was done in relation to it during the session. In the month of April, 1834, nearly three years after the signature of the treaty, the final action of the French chambers upon the bill to carry the treaty into effect was obtained, and resulted in a refusal of the necessary appropriations.”

* * * * *

“The refusal to vote the appropriation, the news of which was received from our minister in Paris, about the 15th day of May last, might have been considered the final determination of the French government not to execute the stipulations of the treaty, and would have justified an immediate communication of the facts to congress, with a recommendation of such ultimate measures as the interest and honor of the United States might seem to require. But with the news of the refusal of the chambers to make the appropriation were conveyed the regrets of the king, and declaration that a national

vessel should be forthwith sent out with instructions to the French minister to give the most ample explanation of the past, and the strongest assurances of the future. After a long passage the promised despatch vessel arrived. The pledges given by the French minister upon receipt of his instructions, were, that as soon after the election of the new members as the charter would permit, the legislative chambers of France should be called together, and the proposition for an appropriation laid before them; that all the constitutional powers of the king and his cabinet should be exerted to accomplish the object, and that the result should be made known early enough to be communicated to congress at the commencement of the present session. Relying on these pledges and not doubting that the acknowledged justice of our claims, the promised exertions of the king and his cabinet, and above all, that sacred regard for the national faith and honor for which the French character has been so distinguished, would secure an early execution of the treaty in all its parts, I did not deem it necessary to call the attention of congress to the subject at the last session.

"I regret to say that the pledges made through the minister of France have not been redeemed. The new chambers met on the 31st July last, and although the subject of fulfilling treaties was alluded to in the speech from the throne, no attempt was made by the king or his cabinet to procure an appropriation to carry it into execution. The reasons given for this omission, although they might be considered sufficient in an ordinary case, are not consistent with the expectations founded upon the assurances given here, for there is no constitutional obstacle to entering into legislative business at the first meeting of the chambers. The point, however, might have been overlooked, had not the chambers, instead of being called to meet at so early a day, that the result of their deliberations might be communicated to me, before the meeting of congress, been prorogued to the 29th of the present month—a period so late that their decision can scarcely be made known to the present congress prior to its dissolution. To avoid this delay, our min-

ister in Paris, in virtue of the assurances given by the French minister in the United States, strongly urged the convocation of the chambers at an earlier day, but without success. It is proper to remark, however, that this refusal has been accompanied with the most positive assurances on the part of the executive government of France, of their intention to press the appropriation at the ensuing session of the chambers.

"The executive branch of this government has, as matters stand, exhausted all the authority upon the subject with which it is invested and which it had any reason to believe could be beneficially employed.

"The idea of acquiescing in the refusal to execute the treaty will not, I am confident, be for a moment entertained by any branch of this government, and further negotiation is equally out of the question.

"If it shall be the pleasure of congress to await the further action of the French chambers, no further consideration of the subject will, at this session, probably be required at your hands. But if, from the original delay in asking for an appropriation, from the refusal of the chambers to grant it when asked, from the omission to bring the subject before the chambers at their last session, from the fact that, including the session, there have been five different occasions when the appropriation might have been made, and from the delay in convoking the chambers until some weeks after the meeting of congress, it was well known that a communication of the whole subject to congress at the last session was prevented by assurances that it should be disposed of before its present meeting, you should feel yourselves constrained to doubt whether it be the intention of the French government, in all its branches, to carry the treaty into effect, and think that such measures as the occasion may be deemed to called for, should be now adopted; the important question arises what those measures shall be.

"Our institutions are essentially pacific. Peace and friendly intercourse with all nations, are as much the desire of our government as they are the interests of our people. But these objects are not to be permanently secured by surrendering the rights of our citizens, or

permitting solemn treaties for their indemnity in cases of flagrant wrong, to be abrogated or set aside."

In relation to the financial condition of the country, the president says :—

" According to the estimate of the treasury department, the revenue accruing from all sources during the present year, will amount to twenty millions, six hundred and twenty-four thousand seven hundred and seventeen dollars, which with the balance remaining in the treasury on the first of January last, of eleven millions, seven hundred and two thousand nine hundred and five dollars, produces an aggregate of thirty-two millions, three hundred and twenty-seven thousand six hundred and twenty-three dollars. The total expenditure during the year for all objects, including the public debt, is estimated at twenty-five millions, five hundred and ninety-one thousand three hundred and ninety dollars, which will leave a balance in the treasury on the first of January, 1835, of six millions, seven hundred and thirty-six thousand two hundred and thirty-two dollars. In this balance, however, will be included about one million, one hundred and fifty thousand dollars of what was heretofore reported by the department as not effective.

" Of former appropriations it is estimated that there will remain unexpended at the close of the year, eight millions, two thousand nine hundred and twenty-five dollars, and that of this sum there will not be required more than five millions, one hundred and forty-one thousand nine hundred and sixty-four dollars, to accomplish the objects of all the current appropriations. Thus it appears that after satisfying all those appropriations, and after discharging the last item of our public debt, which will be done on the first of January next, there will remain unexpended in the treasury an effective balance of about four hundred and forty thousand dollars. That such should be the aspect of our finances is highly flattering to the industry and enterprise of our population, and auspicious of the wealth and prosperity which await the future cultivation of their growing resources. It is not deemed prudent, however, to recommend any change for the present in our impost rates, the effect of

the gradual reduction now in progress in many of them, not being sufficiently tested to guide us in determining the precise amount of revenue which they will produce.

“Free from public debts, at peace with all the world, and with no complicated interests to consult in our intercourse with foreign powers, the present may be hailed as that epoch in our history the most favorable for the settlement of those principles in our domestic policy, which shall be best calculated to give stability to our republic, and secure the blessings of freedom to our citizens. Among these principles, from our past experience, it cannot be doubted, that simplicity in the character of the federal government and a rigid economy in its administration should be regarded as fundamental and sacred.

“All must be sensible that the existence of the public debt, by rendering taxation necessary for its extinguishment, has increased the difficulties which are inseparable from every exercise of the taxing power; and that it was, in this respect, a remote agent in producing those disturbing questions which grew out of the discussions relating to the tariff. If such has been the tendency of a debt incurred in the acquisition and maintenance of our national rights and liberties, the obligations of which all portions of the union cheerfully acknowledged, it must be obvious, that whatever is calculated to increase the burdens of government without necessity, must be fatal to all our hopes of preserving its true character. While we are felicitating ourselves, therefore, upon the extinguishment of the national debt and the prosperous state of our finances, let us not be tempted to depart from those sound maxims of public policy, which enjoin a just adaptation of the revenue to the expenditures that are consistent with a rigid economy, and an entire abstinence from all topics of legislation that are not clearly within the constitutional powers of the government and suggested by the wants of the country. Properly regarded, under such a policy, every diminution of the public burdens arising from taxation, gives to individual enterprise increased power and furnishes to all the members of our happy confederacy new mo-

tives for patriotic affection and support. But above all, its most important effect will be found in its influence upon the character of the government, by confining its action to those objects which will be sure to secure to it the attachment and support of our fellow citizens."

From the report of the secretary of the treasury it appears that the balance in the treasury on the 1st of January,		
A. D. 1833, was,		2,011,777 55
In addition to this balance, the receipts during the year 1833, were, from all sources		33,948,426 25
Viz., from customs	\$29,032,508 91	
Lands	3,967,682 55	
Dividends on bank stock	474,985 00	
Sales of bank stock	135,300 00	
Incidental items	397,949 73	
These made, with the above balance, an aggregate of		35,960,303 80
The expenditures during A. D. 1833, were		24,257,298 40
Viz., on the civil list, foreign intercourse, and miscellaneous subjects	5,716,245 93	
Military service, including fortifications, ordnance, Indian affairs, pensions, arming militia and internal imports	13,096,152 43	
Naval service, including gradual improvement	3,901,356 75	
Public debt	1,543,543 38	
Thus a balance was left in the treasury, on the 1st of January, 1834, amounting to		\$11,702,905 31

Of the public debt, the report continues—"All the four and a half per cents, outstanding at the commencement of the present year, have been redeemed, except the sum of \$443 25. Money sufficient to meet the whole balance was placed in the United States bank and its branches, as commissioners of loans, in May last, and that portion not yet paid to the holders of the debt still remains in these depositories. A part of the five per cent. stock, created in March, A. D. 1821, amounting to \$4,712,060 29, was all of the 123 millions of debt existing in A. D. 1816, and of the subsequent additions to it which was left to be redeemed. It did not become payable till the 1st of January, 1835, but as there was sufficient money in the treasury for the purpose, and it having been considered beneficial to the public to save as far as practicable all the accruing interest, early in July last, agents were employed by this department to purchase at par, if possible, the whole of the remaining debt. Between that time and the 30th ult., the depart-

ment had succeeded in redeeming about \$491,258 35 of it, and additional purchases are constantly making. In October last, the undersigned gave notice that the whole of this debt unredeemed after the 1st of January next would cease to bear interest and would be promptly paid after that date, on application to the commissioners of loans in the several states. Under authority from the commissioners of the sinking fund, this department has since placed and made arrangements to place, seasonably, in those offices ample funds for the above purpose.

"Thus, before the close of the year the whole will either be paid, or money provided to pay it, and the United States will present that happy, and probably in modern times, unprecedented spectacle of a people substantially free from the smallest portion of a public debt."

We subjoin also, some extracts from the report of the secretary of the navy, showing the condition of that important branch of national defence.

"All the services required of our naval force have been promptly performed; our commerce has been protected in the remote as well as in the neighboring seas; our national character has been sustained at home and abroad, while a large portion of our naval officers, seamen and marines, have been kept in active service, under a strict discipline, calculated to fit them for all the duties which may be required of them, whether in defending our property on the ocean from pirates or open enemies, our shores from hostile aggression or our flag from insult."

* * * * *

"Our naval force consists of six ships of the line and seven frigates now building, for the completion of which, additional appropriations to the amount of \$1,527,640 will be required; of five ships of the line, two frigates, and six sloops of war in ordinary, requiring repairs which will cost \$1,362,000, in addition to the materials on hand for that purpose; and of one ship of the line, four frigates, eight sloops of war, and six schooners in commission;—in all, twelve ships of the line, thirteen frigates, fourteen sloops of war and six schooners. Be-

sides which, the frames of ships procured or under contract, for the gradual increase of the navy, and other materials on hand or under contract for that purpose, will afford the means of bringing into the service as soon as it can probably be required, an additional force of five ships of the line, eleven frigates, seven sloops of war and two schooners, the building of which may be immediately commenced on launching our vessels now upon the stocks."

* * * * *

"Our naval force, consisting of commissioned and warrant officers, petty officers, seamen, ordinary seamen, landsmen and boys, amounts to 6,072; and our marine corps, under its new organization, will consist of commissioned officers, non-commissioned officers, musicians and privates, to the number of 1,283; making a total of 7,355."

The report of the secretary of war, embracing a sketch of Indian affairs, and other matters of general and permanent interest, we extract from more largely. He says:—

"Since my last annual report, no military movement of any importance, with the exception of the expedition of the regiment of dragoons, has been rendered necessary. The reports and information which have reached the department respecting the situation of the army, are highly gratifying. In its discipline, its moral character, and the general performance of its duties, the government of the country have every reason to be satisfied with its condition and prospects. As a safeguard for the frontiers, as a school of practical instruction, as a depository of military information, and as the means of preparing and providing in peace for the exigences of war, the present military establishment has fully answered the objects of its organization and support. And it is but an act of justice to state, that in all the essential requisites of capacity and conduct, the officers of the American army do honor to themselves and their country.

"It is known to you that some of the western tribes of Indians roaming through the extensive prairies west

of Arkansas and Missouri, particularly the Camanches and Kiawas, have for some years interrupted the peace of that quarter by predatory attacks upon our citizens, and upon the indigenous and emigrant Indians whom we are under obligations to protect. Their war parties have annoyed our citizens in their intercourse with the Mexican states, and have rendered the communication difficult and hazardous. It became necessary to put a stop to this state of things either by amicable representations or by force. Those remote tribes have little knowledge of the strength of the United States or of their own relative weakness, and it was hoped, that the display of a respectable military force, for the first time in their country, would satisfy them that farther hostilities would lead to their destruction. The dragoons, being peculiarly adapted to this service, were ordered to penetrate into that region and to endeavor by peaceable remonstrances, to establish permanent tranquillity, and if these should fail, to repel any hostile demonstrations which might be made. Fortunately, the efforts to introduce amicable relations were successful, and the object of the expedition was obtained without a single act of hostility. Colonel Dodge, who led the expedition, and his whole command, appear to have performed their duties in the most satisfactory manner, and they encountered with firmness the privations incident to the harassing service upon which they were ordered. It is to be regretted that the prevalence of sickness prevented the whole regiment from joining in this duty, as the same zeal for the public interest pervaded the whole. That sickness deprived the country of some valuable lives, and among others of brigadier-general Leavenworth. Impelled by his anxiety to forward the views of the government, he exposed himself, while yet weak, to the hardships of a border campaign, and sunk under the malady which these induced. His high personal character, his services during the late war, and his exemplary official conduct since, are too well known to you to require from me anything more than this brief allusion to his worth and fate."

* * * * *

"The commissioner of Indian affairs has exhibited in

detail the transactions in the important branch of the public service confided to his superintendence. It is only necessary that I should advert to the more prominent subjects which have received, or which require the action of the government.

“ The commission for the adjustment of unsettled relations with the Indians, west of the Mississippi, terminated, by the provisions of the act instituting it, in July last. Important benefits have resulted from the labors of the commissioners in the adjustment of difficult questions connected with the Indians of that region, and in the treaty arrangements which have been entered into by them. The country assigned for the permanent residence of the eastern Indians, has been so apportioned among them, that little difficulty is anticipated from conflicting claims, or from doubtful boundaries. And both in quality and extent, there can be no doubt but that the region allotted to them will be amply sufficient for their comfortable subsistence during an indefinite period of time.

“ An important council has been held at fort Gibson, by colonel Dodge and by major Armstrong, the superintendent of Indian affairs, with the chiefs of several of the tribes of that quarter, including some of the wandering bands, whose predatory operations have heretofore kept the frontier in alarm. At this council, the situation of the Indians was fully discussed, and amicable relations established. It is to be hoped that the feelings with which they separated may be permanent, and their intercourse hereafter uninterrupted.

“ The united tribe of Pottawatamies, Ottowas, and Chippewas, possessing the country in the vicinity of Chicago, have conditionally acceded to the alteration proposed in the boundaries of the tract assigned for them west of the Mississippi, by the treaty concluded in 1833. Should their proposition be accepted, an extensive and valuable region will be opened for settlement, and they will be removed to a district whose climate is suitable to their habits, and whose other advantages cannot fail to offer them strong inducements for moral and physical improvement.

“An arrangement has been made with the Miamies for the cession of a part of their reservation in the state of Indiana. The tracts held by them there, are far more extensive than they require, and as they appear to be not yet prepared for removal, this relinquishment, without injury to them, will relieve the state, in some measure, from the embarrassment caused by such large reservations as they possess, embracing a most valuable part of the country and interrupting the settlements and communication.

“Instructions were given immediately after the last session of congress, for purchasing from the Wyandots in Ohio, if they were disposed to sell, the reservation secured to them in that state, and for their removal to the West. The commissioner, governor Lucas, conducted the negotiation with great fairness and propriety, fully explaining to the Indians their own position, the wishes of the government and the course of circumstances urging their removal. The matter is not yet terminated, the Indians having requested time for further consideration.

“The necessary appropriations will be asked for the removal of the Seminoles, agreeably to the treaty formed with them; and arrangements have been made for the emigration of the Creeks, as fast as they are prepared for a change of residence. There has not yet been sufficient time to ascertain the result of these measures.

“I am not able to submit to you any more favorable views of the condition of the Cherokees than were embraced in my last annual report. While every dictate of prudence, and in fact of self-preservation, urges their removal, unhappy councils and internal divisions prevent the adoption of that course. Where they are, they are declining and must decline; while that portion of the tribe which is established in the West, is realizing the benefits which were expected to result from a change of position. The system of removal, however, by enrolment is going on, and during this season, about one thousand persons have passed to the West.”

We have already mentioned the death of general Lafayette, in the commencement of this chapter, and we

cannot better close it, than by giving a brief sketch of his eventful life. His name is identified with almost every event of our national history, and associated with that of Washington, will go down to successive generations, as a champion of freedom—the friend of the oppressed—the benefactor of his race.

Lafayette, Gilbert Motier, (formerly marquis de,) was born at Chavagnac, near Brioude, in Auvergne, September, 6, 1757, was educated in the college of Louis le Grand, in Paris, placed at court as an officer in one of the guards of honor, and at the age of seventeen, was married to the grand-daughter of the duke of Noailles. It was under these circumstances, that the young marquis de Lafayette entered upon a career so little to be expected of a youth of vast fortune, of high rank, of powerful connections, at the most brilliant and fascinating court in the world. He left France secretly for America, in 1777, and arrived at Charleston, South Carolina, April 25. being then nineteen years old. The state of this country, it is well known, was at that time most gloomy; a feeble army, without clothing or arms, was with difficulty kept together before a victorious enemy; the government was without resources or credit, and the American agents in Paris were actually obliged to confess that they could not furnish the young nobleman with a conveyance. "Then," said he, "I will fit out a vessel myself;" and he did so. The sensation produced in this country, by his arrival, was very great: it encouraged the almost disheartened people to hope for succor and sympathy from one of the most powerful nations in Europe. Immediately on his arrival, Lafayette received the offer of a command in the continental army, but declined it, raised and equipped a body of men at his own expense, and then entered the service as a volunteer, without pay. He lived in the family of the commander-in-chief, and won his full affection and confidence.

He was appointed major-general in July, and in September, was wounded at Brandywine. He was employed in Pennsylvania and Rhode Island, in 1778, and after receiving the thanks of the country for his important services embarked at Boston, in January, 1779, for France, where

it was thought that he could assist the cause more effectually for a time. The treaty concluded between France and America, about the same period, was by his personal exertions made effective in our favor, and he returned to America with the intelligence that a French force would soon be sent to this country. Immediately on his arrival, he entered the service and received the command of a body of infantry of about two thousand men, which he clothed and equipped, in part, at his own expense. His forced march to Virginia, in December, 1780, raising two thousand guineas at Baltimore, on his own credit, to supply the wants of his troops; his rescue of Richmond; his long trial of generalship with Cornwallis, who boasted that "the boy could not escape him;" the siege of Yorktown, and the storming of the redoubt, are proofs of his devotion to the cause of American independence. Desirous of serving that cause at home, he again returned to France for that purpose.

Congress, which had already acknowledged his merits on former occasions, now passed new resolutions, Nov. 23, 1781, in which, besides the usual marks of approbation, they desire the American ministers to confer with him in their negotiations. In France, a brilliant reputation had preceded him, and he was received with the highest marks of public admiration. Still he urged upon his government the necessity of negotiating with a powerful force in America, and succeeded in obtaining orders to this effect. On his arrival in Cadiz, he found forty-nine ships, with twenty thousand men, ready to follow him to America, had not peace rendered it unnecessary. A letter from him communicated the first intelligence of that event to congress. The importance of his services in France may be seen by consulting his letters in the correspondence of the American revolution. (Boston, 1831.) He received pressing invitations, however, to revisit the country. Washington, in particular, urged it strongly; and, for the third time, Lafayette landed in the United States, August 4, 1784. After passing a few days at Mount Vernon, he visited Baltimore, Philadelphia, New York, Boston, &c., and was every where received with the greatest enthusiasm and delight. Previous to

his return to France, congress appointed a deputation—consisting of one member from each state, “to take leave of him on behalf of the country, and assure him that the United States regard him with particular affection, and will not cease to feel an interest in whatever may concern his honor and prosperity.”

After his return, he was engaged in endeavoring to mitigate the condition of the protestants in France, and to effect the abolition of slavery. In the assembly of the notables, in 1787, he proposed the suppression of *letters de cachet*, and of the state prisons, the emancipation of the protestants, and the convocation of the representatives of the nation. When asked by the count d’Artois, since Charles X, if he demanded the states-general—“Yes,” was his reply, “and something better.” Being elected a member of the states-general, which took the name of *national assembly*, (1789,) he proposed a declaration of rights, and the decree providing for the responsibility of the officers of the crown. Two days after the attack on the Bastile, he was appointed (July, 15) commander-in-chief of the national guards of Paris. The court and national assembly were still at Versailles, and the population of Paris, irritated at this, had already adopted, in sign of opposition, a blue and red cockade (being the colors of the city of Paris.) July 26, Lafayette added to this cockade the white of the royal arms, declaring at the same time that the tri-color should go round the world. On the march of the populace to Versailles, (October 5 and 6,) the national guards claimed to be led thither. Lafayette refused to comply with their demand, until, having received colors in the afternoon, he set off, and arrived at ten o’clock, after having been on horseback from before daylight. He requested that the interior posts of the *chateau* might be committed to him; but this request was refused and the outer posts only were entrusted to the national guards. This was the night on which the assassins murdered two of the queen’s guards, and were proceeding to further acts of violence, when Lafayette, at the head of the national troops, put an end to the disorder, and saved the lives of the royal family. In the morning, he accompanied them to Paris.

On the establishment of the Jacobin club at Paris, he organized, with Bailly, then mayor of Paris, the opposing club of Feuillians. January 20, 1790 he supported the motion for the abolition of titles of nobility, from which period he renounced his own and has never since resumed it. The constitution of a representative monarchy, which was the object of his wishes, was now proposed, and July 13, 1791, was appointed for its acceptance by the king and the nation, and in the name of four millions of national guards, Lafayette swore fidelity to the constitution. Declining the dangerous power of constable of France, or generalissimo of the national guards of the kingdom, after having organized the national militia, and defended the king from popular violence, he resigned all command and retired to his estates.

The first coalition against France, (1792,) soon called him from his retirement. Being appointed one of the three major-generals in the command of the French armies, he established discipline, and defeated the enemy at Phillippeville, Maubeuge and Flornnes, when his career of success was interrupted by the domestic factions of his country. Lafayette openly denounced the terrible Jacobins, in his letter of June 16, in which he declared that the enemies of the revolution, under the mask of popular leaders, were endeavoring to stifle liberty under the excesses of licentiousness. June 20, he appeared at the bar of the assembly to vindicate his conduct, and demand the punishment of the guilty authors of the violence. But the Mountain had already overthrown the constitution, and nothing could be effected. Lafayette then offered to conduct the king and his family to Compeigne. This proffer being declined, he returned to the army, which he endeavored to rally round the constitution. June 30, he was burnt in effigy at the Palais-Royal, and August 5, was accused of treason before the assembly. Still he declared himself openly against the proceedings of August 10, but finding himself unsupported by his soldiers, he determined to leave the country and take refuge in some neutral ground.

Some persons have charged general Lafayette with a want of firmness at this period but it is without a full

understanding of the situation of things. Conscious that a price was set on his head at home, knowing that his troops would not support him against the principles which were triumphing in the clubs and the assembly, and sensible that, even if he were able to protract the contest with the victorious faction, the frontiers would be exposed to the invasion of the emigrants and their foreign allies, with whom he would have felt it treason against the nation to have negotiated, he had no alternative. Having been captured by an Austrian patrol, he was delivered to the Prussians, by whom he was again transferred to Austria. He was carried with great secrecy to Olmutz, where he was subjected to every privation and suffering, and cut off from all communication with his friends, who were not even able to discover the place of his confinement until late in 1794. An unsuccessful attempt was made to deliver him from prison by Dr. Bollman, a German, and Mr. Huger, (now colonel Huger, of Charleston, S. C.) His wife and daughters, however, succeeded in obtaining admission to him and remained with him nearly two years, till his release. Washington had written directly to the emperor of Austria on his behalf without effect; but after the memorable campaign of Bonaparte in Italy, the French government required that the prisoners at Olmutz should be released, which was done August 25, 1797, after a negotiation that lasted three months.

Refusing to take any part in the revolutions of the 18th Fructidor, or of the 18th Brumaire, he returned to his estate at La Grange, and declining the dignity of senator offered him by Bonaparte, he gave his vote against the consulate for life, and taking no further part in public affairs, devoted himself to agricultural pursuits. On the restoration of the Bourbons, in 1814, he perceived that their principles of government were not such as France required, and he did not therefore leave his retirement. The 20th of March, 1815, again saw Napoleon on the imperial throne, and endeavoring to conciliate the nation by the profession of liberal principles. Lafayette refused, though urged through the mediation of Joseph to see him, protested against the *acte additionnel*

of April 22, declined the peerage offered him by the emperor, but accepted the place of representative, to which the votes of his fellow-citizens called him. He first met Napoleon at the opening of the chambers: the emperor received him with great marks of kindness, to which, however, he did not respond; but, although he would take no part in the projects of Napoleon, he gave his vote for all necessary supplies, on the ground that France was invaded, and that it was the duty of all Frenchmen to defend their country. June 21, Napoleon returned from Waterloo, and it was understood that it was determined to dissolve the house of representatives and establish a dictatorship. Two of his counsellors informed Lafayette, that in two hours the representative body would cease to exist. Immediately on the opening of the session, he ascended the tribune and addressed the house as follows: "When, for the first time, after an interval of many years, I raise a voice which all the friends of liberty will still recognize, it is to speak of the danger of the country, which you only can save. This, then, is the moment for us to rally round the old tri-colored standard, the standard of '89, of liberty, of equality, of public order, which we have now to defend against foreign violence and usurpation." He then moved that the house declare itself in permanent session, and all attempts to dissolve it high treason; that whoever should make such an attempt, should be considered a traitor to the country, &c. In the evening, Napoleon sent Lucien to the house, to make one more effort in his favor. Lucien, in a strain of impassioned eloquence, conjured the house not to compromise the honor of the French nation by inconstancy to the emperor. At these words, Lafayette rose in his place and addressing himself directly to the orator, exclaimed, "Who dares accuse the French nation of inconstancy to the emperor? Through the sands of Egypt and the wastes of Russia, over fifty fields of battle, this nation has followed him devotedly; and it is for this that we now mourn the blood of three millions of Frenchmen." This appeal had such an effect on the assembly, that Lucien resumed his seat without finishing his discourse.

A deputation of five members from each house was then appointed to deliberate in committee with the council of ministers. Of this deputation, general Lafayette was a member, and he moved that a committee should be sent to the emperor to demand his abdication. The arch-chancellor refused to put the motion; but the emperor sent in his abdication the next morning (June 22.) A provisional government was formed, and Lafayette was sent to demand a suspension of hostilities of the armies, which was refused. On his return, he found Paris in possession of the enemy; and in a few days after, (July 8,) the doors of the representatives chamber was closed and guarded by Prussian troops. Lafayette conducted a number of the members to the house of Lanjuinais, the president, where they drew up a protest against this act of violence and quietly separated.

Lafayette now retired once more to La Grange, where he remained till 1818, when he was chosen member of the chamber of deputies. Here he continued to support his constitutional principles, by opposing the laws of exceptions, the establishment of the censorship of the press, the suspension of personal liberty, &c., and by advocating the cause of public instruction, the organization of a national militia and the inviolability of the charter.

In June, 1824, he landed at New York, on a visit to the United States, upon the invitation of the president, and was received in every part of the country, with the warmest expressions of delight and enthusiasm. He was proclaimed, by the popular voice, "the guest of the nation," and his presence everywhere the signal for festivals and rejoicings. He passed through the twenty-four states of the union in a sort of triumphal procession, in which all parties joined to forget their dissensions, in which the veterans of the war renewed their youth, and the young were carried back to the doings and sufferings of their fathers. Having celebrated, at Bunker Hill, the anniversary of the first conflict of the revolution, and at Yorktown, that of its closing scene, in which he himself had borne so conspicuous a part, and taken leave of the four ex-presidents of the United States, he received the farewell of the presidents in the name of

the nation, and sailed from the capital in a frigate named, in compliment to him, the *Brandywine*, September 7, 1825, and arrived at Havre, where the citizens, having peaceably assembled to make some demonstrations of their respect for his character, were dispersed by the *gendarmérie*. In December following, the congress of the United States made him a grant of \$200,000, and a township of land, "in consideration of his important services and expenditures during the American revolution." The grant of money was in the shape of stock, bearing interest at six per cent., and redeemable December 31, 1834. In August, 1827, he attended the obsequies of Manuel, over whose body he pronounced a eulogy. In November, 1827, the chamber of deputies was dissolved. Lafayette was again returned a member by the new elections. Shortly before the revolution of 1830, he travelled to Lyons, &c., and was enthusiastically received—a striking contrast to the conduct of the ministers towards him, and an alarming symptom to the despotic government. During the revolution of July, 1830, he was appointed general-in-chief of the national guards of Paris, and, though not personally engaged in the fight, his activity and name were of the greatest service. To the Americans, Lafayette, the intimate friend of Washington, had appeared in his last visit, almost like a great historical character returning from beyond the grave. In the eyes of the French, he is a man of the early days of their revolution—a man, moreover, who has never changed side or principle. His undeviating consistency is acknowledged by all, even by those who do not allow him the possession of first rate talents. When the national guards were established throughout France, after the termination of the struggle, he was appointed their commander-in-chief, and his activity in this post was admirable. August 17, he was made marshal of France. His influence with the government seems to have been for some time great, but whether his principles were too decidedly republican to please the new authorities, (a few days after the adoption of the new charter, he declared himself against hereditary peerage, and repeatedly called himself a pupil of the American school,)

or whether he was considered as the rallying point of the republican party, or whatever may have been the reason, he sent in his resignation in December, 1830, which was accepted, and count Lobau appointed chief of the national guards of Paris. Lafayette declared from the tribune, that he had acted thus in consequence of the distrust which the power accompanying his situation seemed to excite in some people. On the same occasion, he also expressed his disapprobation of the new law of election. Shortly before his resignation he exerted himself most praiseworthily to maintain order during the trial of the ex-ministers.

A more striking evidence of the profound veneration of the American people for the character of Lafayette, and of their grief for his death, could not have been afforded, than was exhibited in the imposing funeral rites spontaneously solemnized in honor of the illustrious dead. His obsequies were attended by the most numerous procession ever witnessed in New York. Of the vast number of citizens who joined in this tribute of respect and gratitude, some estimate may be formed from the fact that the procession was between two and three miles in length. The streets through which it passed were paved with human beings, of all ages, sexes, and conditions, every porch, window and housetop was thronged, and not a tree, or post, or perch, however precarious, that did not support some adventurous spectator of the saddening spectacle. The crape-covered banners, the inverted arms, the muffled drums and the slow and solemn notes of the funeral music, accorded well with the feelings of the immense concourse, which seemed to be animated by one sentiment of sorrow. The proceedings were properly terminated by an oration, delivered by James Tallmadge, in Castle garden, to an audience as numerous as the limits of that spacious place could possibly contain. The virtue, the heroism, the noble ardor of patriotism, the disinterested love of human kind, the purity of principle, and consistency of life, that distinguished the illustrious Lafayette—his generous sacrifices for this country, his companionship with Washington, and the early laurels which he won in our war

for independence—these are themes of eulogium on which the orator could not expatiate without kindling into eloquence.

CHAPTER XXV.

The First Session of the Twenty-fourth Congress.—President's Message.—Foreign Relations.—Finances of the Nation, 1834-5.—Situation of the Army and Navy.

THE twenty-fourth congress assembled at Washington on the 7th of December, 1835, and the annual message of the president on that occasion is unusually long and interesting. No material change had taken place in the aspect of foreign affairs, except that our national relations with France had assumed an aspect decidedly more hostile; and we feel warranted in extracting at length from the message on a subject of such importance as this was at that time considered, when for the first time in twenty years, the United States seemed about to be involved in a war with one of the most powerful nations of the earth.

“Since the last session of congress,”—says the message—“the validity of our claims upon France as liquidated by the treaty of 1831, has been acknowledged by both branches of her legislature, and the money has been appropriated for their discharge; but the payment is, I regret to inform you, still withheld.

“A brief recapitulation of the most important incidents in this protracted controversy, will show how utterly untenable are the grounds upon which this course is attempted to be justified.

“On entering upon the duties of my station, I found the United States an unsuccessful applicant to the justice of France, for the satisfaction of claims, the validity of which was never questionable, and has now been most solemnly admitted by France herself. The antiquity of these claims, their high justice, and the aggravating cir-

umstances out of which they arose, are too familiar to the American people to require description. It is sufficient to say, that for a period of ten years and upwards, our commerce was, with but little interruption, the subject of constant aggressions on the part of France—aggressions, the ordinary features of which were condemnations of vessels and cargoes under arbitrary decrees, adopted in contravention, as well of the laws of nations, as of treaty stipulations; burnings on the high seas; and seizures and confiscations, under special imperial rescripts, in the ports of other nations occupied by the armies, or under the control of France. Such, it is now conceded, is the character of the wrongs we suffered—wrong, in many cases so flagrant, that even their authors never denied our right to reparation. Of the extent of these injuries, some conception may be formed from the fact, that after the burning of a large amount at sea, and the necessary deterioration, in other cases, by long detention, the American property so seized and sacrificed at forced sales, excluding what was adjudged to privateers, before or without condemnation, brought into the French treasury upwards of twenty-four millions of francs, besides large custom-house duties.

“The subject had already been an affair of twenty years’ uninterrupted negotiation, except for a short time when France was overwhelmed by the military power of united Europe. During this period, while other nations were extorting from her payment of their claims at the point of the bayonet, the United States intermitted their demand for justice, out of respect for the oppressed condition of a gallant people, to whom they felt under obligations for fraternal assistance in their own days of suffering and of peril. The bad effects of these protracted and unavailing discussions, as well upon our relations with France as upon our national character, were obvious; and the line of duty was to my mind equally so. This was either to insist upon the adjustment of our claims within a reasonable period or to abandon them altogether.

“I could not doubt, that by this course, the interests and honor of both countries would be best consulted. Instructions were therefore given in this spirit to the

minister who was sent out once more to demand reparation. Upon the meeting of congress in December, 1829, I felt it my duty to speak of these claims, and the delays of France, in terms calculated to call the serious attention of both countries to the subject. The then French minister took exception to the message, on the ground of its containing a menace, under which it was not agreeable to the French government to negotiate. The American minister, of his own accord, refuted the construction which was attempted to be put upon the message, and at the same time called to the recollection of the French ministry, that the president's message was a communication addressed, not to foreign governments, but to the congress of the United States, in which it was enjoined upon him by the constitution, to lay before that body information of the state of the union, comprehending its foreign as well as its domestic relations; and that if, in the discharge of this duty, he felt it incumbent upon him to summon the attention of congress, in due time, to what might be the possible consequences of existing difficulties with any foreign government, he might fairly be supposed to do so, under a sense of what was due from him, in a frank communication with another branch of his own government, and not from any intention of holding a menace over a foreign power. The views taken by him received my approbation, the French government was satisfied, and the negotiation was continued. It terminated in the treaty of July 4, 1831, recognizing the justice of our claims in part and promising payment to the amount of twenty-five millions of francs in six annual instalments.

“The ratifications of this treaty were exchanged at Washington, on the 2d of February, 1832, and in five days thereafter it was laid before congress, who immediately passed the acts necessary, on our part, to secure to France the commercial advantages conceded to her in the compact. The treaty had previously been solemnly ratified by the king of the French, in terms which are certainly not mere matters of form, and of which the translation is as follows: ‘We, approving the above convention in all and each of the dispositions which are con-

tained in it, do declare, by ourselves, as well as by our heirs and successors, that it is accepted, approved, ratified and confirmed; and by these presents, signed by our hand, we do accept, approve, ratify and confirm it; promising, on the faith and word of a king, to observe it, and to cause it to be observed inviolably, without ever contravening it, or suffering it to be contravened, directly or indirectly, for any cause, or under any pretence whatsoever.'

"Official information of the exchange of ratifications in the United States reached Paris whilst the chambers were in session. The extraordinary, and to us injurious, delays of the French government, in their action upon the subject of its fulfillment, have been heretofore stated to congress, and I have no disposition to enlarge upon them here. It is sufficient to observe that the then pending session was allowed to expire without even an effort to obtain the necessary appropriations; that the two succeeding ones were also suffered to pass away without any thing like a serious attempt to obtain a decision upon the subject; and that it was not until the fourth session, almost three years after the conclusion of the treaty, and more than two years after the exchange of ratification, that the bill for the execution of the treaty was pressed to a vote and rejected.

"In the mean time, the government of the United States, having full confidence that a treaty entered into and solemnly ratified by the French king, would be executed in good faith, and not doubting that provision would be made for the payment of the first instalment, which was to become due on the 2d day of February, 1833, negotiated a draft for the amount through the bank of the United States. When this draft was presented by the holder, with the credentials required by the treaty to authorize him to receive the money, the government of France allowed it to be protested. In addition to the injury in the non-payment of the money by France, conformably to her engagement, the United States were exposed to a heavy claim on the part of the bank, under pretence of damages, in satisfaction of which that institution seized upon, and still retains, an equal amount of the

public moneys. Congress was in session when the decision of the chambers reached Washington, and an immediate communication of this apparently final decision of France not to fulfil the stipulations of the treaty, was the course naturally to be expected from the president. The deep tone of dissatisfaction which pervaded the public mind, and the correspondent excitement produced in congress by only a general knowledge of the result, rendered it more than probable, that a resort to immediate measures of redress would be the consequence of calling the attention of that body to the subject. Sincerely desirous of preserving the pacific relations which had so long existed between the two countries, I was anxious to avoid this course if I could be satisfied that by doing so, neither the interest nor the honor of my country would be compromitted. Without the fullest assurances upon that point, I could not hope to acquit myself of the responsibility to be incurred, in suffering congress to adjourn without laying the subject before them. Those received by me were believed to be of that character.

“That the feelings produced in the United States by the news of the rejection of the appropriation, would be such as I have described them to have been, was foreseen by the French government, and prompt measures were taken by it to prevent the consequences. The king, in person, expressed through our minister at Paris, his profound regret at the decision of the chambers, and promised to send, forthwith, a national ship, with despatches to his minister here, authorizing him to give such assurances as would satisfy the government and the people of the United States that the treaty would yet be faithfully executed by France. The national ship arrived, and the minister received his instructions. Claiming to act under the authority derived from them, he gave to this government, in the name of his, the most solemn assurances, that as soon after the new elections as the charter would permit, the French chambers would be convened, and the attempt to procure the necessary appropriations renewed ; that all the constitutional powers of the king and his ministers should be put in requisition to accomplish the object ; and he was understood, and so expressly informed

by this government at the time, to engage, that the question should be pressed to a decision at a period sufficiently early to permit information of the result to be communicated to congress at the commencement of their next session. Relying upon these assurances, I incurred the responsibility, great as I regarded it to be, of suffering congress to separate without communicating with them upon the subject.

“The expectations justly founded upon the promises thus solemnly made to this government by that of France, were not realized. The French chambers met on the 31st of July, 1834, soon after the election; and although our minister in Paris urged the French ministry to bring the subject before them, they declined doing so. He next insisted that the chambers, if prorogued without acting on the subject, should be re-assembled at a period so early that their action on the treaty might be known in Washington prior to the meeting of congress. This reasonable request was not only declined, but the chambers were prorogued to the 29th of December, a day so late that their decision, however urgently pressed, could not, in all probability, be obtained in time to reach Washington before the necessary adjournment of congress by the constitution. The reasons given by the ministry for refusing to convoke the chambers at an earlier period, were afterwards shown not to be insuperable, by their actual convocation on the 1st of December, under a special call, for domestic purposes—which fact however, did not become known to this government until after the commencement of the last session of congress.

“Thus disappointed in our just expectations, it became my imperative duty to consult with congress in regard to the expediency of a resort to retaliatory measures, in case the stipulations of the treaty should not be speedily complied with, and to recommend such as, in my judgment, the occasion called for. To this end, an unreserved communication of the case, in all its aspects, became indispensable. To have shrunk, in making it, from saying all that was necessary to its correct understanding, and that the truth would justify, for fear of giving offence to others, would have been unworthy of us. To have

gone, on the other hand, a single step farther, for the purpose of wounding the pride of a government and people with whom we had so many motives for cultivating relations of amity and reciprocal advantage, would have been unwise and improper. Admonished by the past of the difficulty of making even the simplest statement of our wrongs, without disturbing the sensibilities of those who had, by their position, become responsible for their redress, and earnestly desirous of preventing further obstacles from that source, I went out of my way to preclude a construction of the message, by which the recommendation that was made to congress might be regarded as a menace to France, in not only disavowing such a design, but in declaring that her pride and her power were too well known to expect any thing from her fears. The message did not reach Paris until more than a month after the chambers had been in session; and such was the insensibility of the ministry to our rightful claims and just expectations, that our minister had been informed that the matter, when introduced, would not be pressed as a cabinet measure.

Although the message was not officially communicated to the French government, and notwithstanding the declaration to the contrary which it contained, the French ministry decided to consider the conditional recommendation of reprisals, a menace and an insult, which the honor of the nation made it incumbent on them to resent. The measures resorted to by them to evince their sense of the supposed indignity, were the immediate recall of their minister at Washington, the offer of passports to the American minister at Paris, and a public notice to the legislative chambers that all diplomatic intercourse with the United States had been suspended.

“Having in this manner vindicated the dignity of France, they next proceeded to illustrate her justice. To this end, a bill was immediately introduced into the chamber of deputies, proposing to make the appropriations necessary to carry into effect the treaty. As this bill subsequently passed into a law, the provisions of which now constitute the main subject of difficulty between the two nations, it becomes my duty, in order to

place the subject before you in a clear light, to trace the history of its passage, and to refer, with some particularity, to the proceedings and discussions in regard to it. The minister of finance, in his opening speech, alluded to the measures which had been adopted to resent the supposed indignity, and recommended the execution of the treaty, as a measure required by the honor and justice of France. He, as the organ of the ministry, declared the message so long as it had not received the sanction of congress, a mere expression of the personal opinion of the president, for which neither the government, nor people of the United States, were responsible, and that an engagement had been entered into, for the fulfilment of which the honor of France was pledged. Entertaining these views, the single condition which the French ministry proposed to annex to the payment of the money was, that it should not be made until it was ascertained that the government of the United States had done nothing to injure the interests of France ; or, in other words, that no steps had been authorized by congress of a hostile character towards France.

“ What the disposition or action of congress might be, was then unknown to the French cabinet. But on the 14th of January, the senate resolved that it was, at that time, inexpedient to adopt any legislative measures in regard to the state of affairs between the United States and France, and no action on the subject had occurred in the house of representatives. These facts were known in Paris prior to the 28th of March, 1835, when the committee, to whom the bill of indemnification had been referred, reported it to the chamber of deputies. That committee substantially re-echoed the sentiments of the ministry, declared that congress had set aside the proposition of the president, and recommended the passage of the bill, without any other restriction than that originally proposed. Thus was it known to the French ministry and chambers, that if the position assumed by them, and which had been so frequently and solemnly announced as the only one compatible with the honor of France, was maintained, and the bill passed as originally proposed, the money would be paid, and there would be an end of this unfortunate controversy.

But this cheering prospect was soon destroyed by an amendment introduced into the bill at the moment of its passage, providing that the money should not be paid until the French government had received satisfactory explanations of the president's message, on the 2d December, 1834; and what is still more extraordinary, the president of the council of ministers adopted this amendment, and consented to its incorporation in the bill. In regard to a supposed insult, which had been formally resented by the recall of their minister, and the offer of passports to ours, they now, for the first time, proposed to ask explanations. Sentiments and propositions, which they had declared could not justly be imputed to the government or people of the United States, are set up as obstacles to the performance of an act of conceded justice to that government and people. They had declared that the honor of France required the fulfilment of the engagement into which the king had entered, unless congress adopted the recommendations of the message. They ascertained that congress did not adopt them, and yet that fulfilment is refused, unless they first obtain from the president explanations of an opinion characterized by themselves as personal and inoperative.

“The conception that it was my intention to menace or insult the government of France, is as unfounded, as the attempt to extort from the fears of that nation what her sense of justice may deny, would be vain and ridiculous. But the constitution of the United States imposes on the president the duty of laying before congress the condition of the country, in its foreign and domestic relations, and of recommending such measures as may, in his opinion, be required by its interests. From the performance of this duty he cannot be deterred by the fear of wounding the sensibilities of the people or government of whom it may become necessary to speak; and the American people are incapable of submitting to an interference, by any government on earth, however powerful, with the free performance of the domestic duties which the constitution has imposed on their public functionaries. The discussions which intervene between the several departments of our government belong to our-

selves; and for any thing said in them, our public servants are only responsible to their own constituents and to each other. If, in the course of their consultations facts are erroneously stated, or unjust deductions are made, they require no other inducement to correct them, however informed of their error, than their love of justice, and what is due to their own character; but they can never submit to be interrogated upon the subject, as a matter of right, by a foreign power. When our discussions terminate in acts, our responsibility to foreign powers commences, not as individuals, but as a nation. The principle which calls in question the president for the language of his message, would equally justify a foreign power in demanding explanation of the language used in the report of a committee, or by a member in debate.

“This is not the first time that the government of France has taken exception to the messages of American presidents. President Washington, and the first president Adams, in the performance of their duties to the American people, fell under the animadversion of the French directory. The objection taken by the ministry of Charles X., and removed by the explanations made by our minister on the spot, has already been adverted to. When it was understood that the ministry of the present king took exception to my message of last year, putting a construction upon it which was disavowed on its face, our late minister at Paris, in answer to the note which first announced a dissatisfaction with the language used in the message, made a communication to the French government under date of the 29th of January, 1835, calculated to remove all impressions which an unreasonable susceptibility had created. He repeated, and called the attention of the French government to, the disavowal contained in the message itself, of any intention to intimidate by menace; he truly declared that it contained, and was intended to contain, no charge of ill faith against the king of the French, and properly distinguished between the right to complain, in unexceptionable terms, of the omission to execute an agreement, and an accusation of bad motives in withholding such execu-

tion, and demonstrated, that the necessary use of that right ought not to be considered as an offensive imputation. Although this communication was made without instructions, and entirely on the minister's own responsibility, yet it was afterwards made the act of this government by my full approbation, and that approbation was officially made known on the 25th of April, 1835, to the French government. It however failed to have any effect. The law, after this friendly explanation, passed with the obnoxious amendment, supported by the king's ministers, and was finally approved by the king.

"The people of the United States are justly attached to a pacific system in their intercourse with foreign nations. It is proper, therefore, that they should know whether their government has adhered to it. In the present instance, it has been carried to the utmost extent that was consistent with a becoming self-respect. The note of the 29th January, to which I have before alluded, was not the only one which our minister took upon himself the responsibility of presenting, on the same subject and in the same spirit.

"Finding that it was intended to make the payment of a just debt dependent on the performance of a condition which he knew could never be complied with, he thought it a duty to make another attempt to convince the French government, that whilst self-respect and regard to the dignity of other nations would always prevent us from using any language that ought to give offence, yet we could never admit a right in any foreign government to ask explanation of, or to interfere in any manner in, the communications which one branch of our public councils made with another ; that in the present case, no such language had been used, and that this had in a former note been fully and voluntarily stated, before it was contemplated to make the explanation a condition ; and that there might be no misapprehension, he stated the terms used in that note, and he officially informed them that it had been approved by the president ; and that, therefore, every explanation which could reasonably be asked, or honorably be given, had been already made ; that the contemplated measure had been antic-

pated by a voluntary and friendly declaration, and was therefore not only useless, but might be deemed offensive and certainly would not be complied with, if annexed as a condition.

“When this latter communication, to which I specially invite the attention of congress, was laid before me, I entertained the hope that the means it was obviously intended to afford, of an honorable and speedy adjustment of the difficulties between the two nations, would have been accepted; and I therefore did not hesitate to give it my sanction and full approbation. This was due to the minister who had made himself responsible for the act; and it was published to the people of the United States, and is now laid before their representatives, to show how far their executive has gone in its endeavors to restore a good understanding between the two countries. It would have been at any time communicated to the government of France, had it been officially requested.

“The French government having received all the explanation which honor and principle permitted, and which could in reason be asked, it was hoped it would no longer hesitate to pay the instalments now due. The agent authorized to receive the money was instructed to inform the French minister of his readiness to do so. In reply to this notice, he was told that the money could not then be paid, because the formalities required by the act of the chambers had not been arranged.

“Not having received any official communication of the intentions of the French government, and anxious to bring, as far as practicable, this unpleasant affair to a close before the meeting of congress, that you might have the whole subject before you, I caused our charge d’affaires at Paris to be instructed to ask for the final determination of the French government; and in the event of their refusal to pay the instalments now due without further explanations, to return to the United States.

“The result of this last application has not yet reached us, but is daily expected. That it may be favorable is my sincere wish. France having now, through all the branches of her government, acknowledged the va-

lidity of our claims, and the obligation of the treaty of 1831, and there really existing no adequate cause for further delay, will, at length, it may be hoped, adopt the course which the interests of both nations, not less than the principles of justice, so imperiously require. The treaty being once executed on her part, little will remain to disturb the friendly relations of the two countries; nothing, indeed, which will not yield to the suggestions of a pacific and enlightened policy, and to the influence of that mutual good will and of those generous recollections, which we may confidently expect will then be revived in all their ancient force. In any event, however, the principle involved in the new aspect which has been given to the controversy is so vitally important to the independent administration of the government, that it can neither be surrendered nor compromised, without national degradation. I hope it is unnecessary for me to say, that such a sacrifice will not be made through any agency of mine. The honor of my country shall never be stained by an apology from me, for the statement of truth and the performance of duty; nor can I give any explanation of my official acts, except such as is due to integrity and justice, and consistent with the principles on which our institutions have been framed. This determination will, I am confident, be approved by my constituents. I have, indeed, studied their character to but little purpose, if the sum of twenty-five millions of francs will have the weight of a feather, in the estimation of what appertains to their national independence; and if, unhappily, a different impression should at any time obtain in any quarter, they will, I am sure, rally round the government of their choice with alacrity and unanimity, and silence forever the degrading imputation."

In relation to the subject of finance, it appears from the report of the secretary of the treasury that

The balance in the treasury on the 1st of January, 1834 was \$11,702,905 31
 In addition to this balance, the receipts from all sources,
 during the year 1834, were 21,791,935 55

Viz.—From customs	\$16,214,957	15
Lands	4,857,600	69
Dividends on bank stock, &c.	234,349	50
Sales of bank stock	352,300	00
Incidental items	132,728	21
These, with the above balance, make an aggregate of . .	33,494,846	84
The expenditures during 1834, on all objects, were . . .	24,601,982	44
Viz.—Civil list, foreign intercourse, and miscellaneous subjects	\$4,404,728	25
Military service, including fortifications, ordnance, Indian affairs, pensions, arming militia, and internal improvement	10,064,427	88
Naval service, including gradual improvement	3,956,260	42
Public debt	6,176,565	19
This being an excess of expenditures over the receipts of \$2,810,046 89, a balance was left in the treasury on the 1st of January, 1835, amounting to	\$8,892,853	42

In the annual report from the secretary of war, he says—

“The general positions of the army remain the same now as at the time of my last report. Some movements, however, have taken place, which it is proper should be specially brought before you.

“Fourteen companies have been placed under the command of general Clinch, in Florida, with a view to impose a proper restraint upon the Seminole Indians, who have occasionally evinced an unquiet spirit, and to ensure the execution of the treaty stipulations providing for the removal of these Indians. As soon as this takes place, these troops will assume their proper positions.

“The regiment of dragoons has been usefully employed in penetrating into the Indian country, in exhibiting to the Indians a force well calculated to check or to punish any hostilities they may commit, and in adding to our geographical knowledge of those remote regions. Colonel Kearney, with one detachment, marched through the country between the Des Moines and the Mississippi rivers. Colonel Dodge, with another, made an excursion south of the Missouri towards the Rocky mountains; and major Mason, with a third, joined by a detachment of infantry, was employed in duties connected with the assemblage of a body of Indians, at the Cross Timbers near the great Western Prairie, for the purpose of establishing permanent specific relations between the remote

wandering bands and the United States and the more agricultural Indians, who have migrated, under the public faith, to that region, or who seemed disposed to improve their condition by more settled habits. The duties committed to these troops have been well performed."

The reports of the secretary of the navy, and of the post master general, furnish many interesting details relative to their several departments, but our limits forbid any extracts. It is however necessary to remark, that their reports were acceptable and gratifying to the people.

CHAPTER XXVI.

Difficulty with the French Government.—Interruption of Diplomatic Intercourse.—Prospect of War.—Adjustment of Difficulties.—Surplus Revenue.

AN immense sensation was produced, from one extremity of the country to the other, by the hostile aspect of affairs with France, disclosed in the annual message of the president, and this excitement was considerably increased by the information conveyed in a subsequent message to both houses of congress from the president. This document is so concise, that an equally full and interesting detail could not be given in a less space, for which reason the message is given entire.

To the Senate and House of Representatives.

Gentlemen: In my message at the opening of your session, I informed you that our charge d' affaires at Paris had been instructed to ask for the final determination of the French government, in relation to the payment of the indemnification, secured by the treaty of the 4th of July, 1831, and that when advices on the result should be received, it would be made the subject of a special communication.

In execution of this design, I now transmit to you the papers numbered from 1 to 13, inclusive, containing, among other things, the correspondence on this subject between our charge d' affaires and the French minister of foreign affairs, from which it will be seen, that France requires, as a condition precedent to the execution of a treaty unconditionally ratified, and to the payment of a debt acknowledged by all the branches of her government to be due, that certain explanations shall be made, of which she dictates the terms. These terms are such as that government has already been officially informed cannot be complied with; and, if persisted in, they must be considered as a deliberate refusal on the part of France to fulfil engagements binding by the laws of nations, and held sacred by the whole civilized world. The nature of the act which France requires from this government, is clearly set forth in the letter of the French minister, marked No. 4. "We will pay the money," says he, "when the government of the United States is ready, on its part, to declare to us, by addressing its claims to us officially, in writing, that it regrets the misunderstanding which has arisen between the two countries; that this misunderstanding is founded on a mistake; that it never entered into its intention to call in question the good faith of the French government, nor to take a menacing attitude towards France;" and he adds, "if the government of the United States does not give this assurance, we shall be obliged to think that this misunderstanding is not the result of an error." In the letter marked No. 6, the French minister also remarks, that "the government of the United States knows, that upon itself depends henceforward the execution of the treaty of July 4, 1831."

Obliged, by the precise language thus used by the French minister, to view it as a peremptory refusal to execute the treaty, except on terms incompatible with the honor and independence of the United States, and persuaded, that, on considering the correspondence now submitted to you, you can regard it in no other light, it becomes my duty to call your attention to such measures as the exigency of the case demands, if the claim of interfering in the communications between the different

branches of our government shall be persisted in. This pretension is rendered the more unreasonable by the fact, that the substance of the required explanation has been repeatedly and voluntarily given before it was insisted on as a condition—a condition the more humiliating, because it is demanded as the equivalent of a pecuniary consideration. Does France desire only a declaration that we had no intention to obtain our rights by an address to her fears rather than to her justice? She has already had it, frankly and explicitly given by our minister accredited to her government, his act ratified by me, and my confirmation of it officially communicated by him, in his letter to the French minister of foreign affairs, of the 25th of April, 1835, and repeated by my published approval of that letter after the passage of the bill of indemnification. Does France want a degrading, servile repetition of this act, in terms which she shall dictate, and which will involve an acknowledgement of her assumed right to interfere in our domestic councils? She will never obtain it. The spirit of the American people, the dignity of the legislature, and the firm resolve of our executive government, forbid it.

As the answer of the French minister to our charge d' affaires at Paris contains an allusion to a letter addressed by him to the representative of France at this place, it now becomes proper to lay before you the correspondence had between that functionary and the secretary of state relative to that letter, and to accompany the same with such explanations as will enable you to understand the course of the executive in regard to it. Recurring to the historical statement made at the commencement of your session, of the origin and progress of our difficulties with France, it will be recollected that, on the return of our minister to the United States, I caused my official approval of the explanations he had given to the French minister of foreign affairs to be made public. As the French government had noticed the message without its being officially communicated, it was not doubted that, if they were disposed to pay the money due to us, they would notice any public explanation of the government of the United States in the same

way. But, contrary to these well founded expectations the French ministry did not take this fair opportunity to relieve themselves from their unfortunate position, and to do justice of the United States.

Whilst, however, the government of the United States was awaiting the movements of the French government, in perfect confidence that the difficulty was at an end the secretary of state received a call from the French charge d' affaires in Washington, who desired to read to him a letter he had received from the French minister of foreign affairs. He was asked whether he was instructed or directed to make any official communication, and replied that he was only authorized to read the letter, and furnish a copy if requested. The substance of its contents, it is presumed, may be gathered from Nos. 4 and 6 herewith transmitted. It was an attempt to make known to the government of the United States, privately, in what manner it could make explanations, apparently voluntary, but really dictated by France, acceptable to her, and thus obtain payment of the twenty-five millions of francs. No exception was taken to this mode of communication, which is too often used to prepare the way for official intercourse, but the suggestions made in it were, in their substance, wholly inadmissible. Not being in the shape of an official communication to the government, it did not admit of reply or official notice, nor could it safely be made the basis of an action by the executive or the legislature; and the secretary of state did not think proper to ask a copy, because he could have no use for it. Copies of papers, marked Nos. 9. 10. and 11, show an attempt on the part of the French charge d' affaires, many weeks afterwards, to place a copy of this paper among the archives of this government, which for obvious reasons was not allowed to be done; but the assurance given was repeated, that any official communication which he might be authorized to make in the accustomed form, would receive a prompt and just consideration. The indiscretion of this attempt was made more manifest by the subsequent avowal of the French charge d' affaires, that the object was to bring this letter before congress and the American people. If foreign

agents, on a subject of disagreement between their government and this, wish to prefer an appeal to the American people, they will hereafter, it is hoped, better appreciate their own rights and the respect due to others, than to attempt to use the executive as the passive organ of their communications. It is due to the character of our institutions that the diplomatic intercourse of this government should be conducted with the utmost directness and simplicity, and that in all cases of importance, the communications received or made by the executive, should assume the accustomed official form. It is only by insisting on this form, that foreign powers can be held to full responsibility ; that their communications can be officially replied to ; or that the advice or interference of the legislature can, with propriety, be invited by the president. This course is also best calculated, on the one hand, to shield that officer from unjust suspicions, and, on the other, to subject this portion of his acts to public scrutiny ; and if occasion should require it, to constitutional animadversion. It was the more necessary to adhere to these principles in the instance in question, inasmuch as, in addition to other important interests, it very intimately concerned the national honor ; a matter, in my judgment, much too sacred to be made the subject of private and unofficial negotiation.

It will be perceived that this letter of the French minister of foreign affairs was read to the secretary of state on the 11th of September last. This was the first authentic indication of the specific views of the French government, received by the government of the United States after the passage of the bill of indemnification. Inasmuch as the letter had been written before the official notice of my approval of Mr. Livingston's last explanation and remonstrance could have reached Paris, just ground of hope was left, as has been before stated, that the French government on receiving this information, in the same manner the alleged offending message had reached them, would desist from their extraordinary demand, and pay the money at once. To give them an opportunity to do so, and, at all events, to elicit their final determination, and the ground they intended to oc-

cupy, the instructions were given to our charge d' affaires which were adverted to at the commencement of the present session of congress. The result, as you have seen is a demand of an official written expression of regrets, and a direct explanation addressed to France, with a distinct intimation that this is a *sine qua non*.

Mr. Barton having, in pursuance of his instructions returned to the United States, and the charge d'affaires of France having been recalled, all diplomatic intercourse between the two countries is suspended; a state of things originating in an unreasonable susceptibility on the part of the French government, and rendered necessary on our part by their refusal to perform engagements contained in a treaty, from the faithful performance of which by us they are to this day enjoying many important commercial advantages.

It is time that this unequal position of affairs should cease, and that legislative action should be brought to sustain executive exertion in such measures as the case requires. While France persists in her refusal to comply with the terms of a treaty, the object of which was, by removing all causes of mutual complaint, to renew ancient feelings of friendship, and to unite the two nations in the bonds of amity, and of a mutually beneficial commerce, she cannot justly complain if we adopt such peaceful remedies as the law of nations and the circumstances of the case may authorize and demand. Of the nature of these remedies, I have heretofore had occasion to speak, and, in reference to a particular contingency, to express my conviction that reprisals would be best adapted to the emergency then contemplated. Since that period, France, by all the departments of her government, has acknowledged the validity of our claims, and the obligations of the treaty, and has appropriated the moneys which are necessary to its execution; and though payment is withheld on grounds vitally important to our existence as an independent nation, it is not to be believed that she can have determined permanently to retain a position so utterly indefensible. In the altered state of the question in controversy, and under all existing circumstances, it appears to me, that until such a

determination shall have become evident, it will be proper and sufficient to retaliate her present refusal to comply with her engagements, by prohibiting the introduction of French products and the entry of French vessels into our ports. Between this and the interdiction of all commercial intercourse, or of other remedies, you, as the representatives of the people, must determine.

I recommend the former, in the present posture of our affairs, as being the least injurious to our commerce, and as attended with the least difficulty of returning to the usual state of friendly intercourse, if the government of France shall render us the justice that is due, and also, as a proper preliminary step to stronger measures, should their adoption be rendered necessary by subsequent events.

The return of our charge d' affaires is attended with public notices of naval preparations on the part of France, destined for our seas. Of the cause and intent of these armaments, I have no authentic information, nor any other means of judging, except such as are common to yourselves and to the public; but whatever may be their object, we are not at liberty to regard them as unconnected with the measures which hostile movements on the part of France may compel us to pursue. They at least deserve to be met by adequate preparations on our part, and I therefore strongly urge large and speedy appropriations for the increase of the navy, and the completion of our coast defences.

If this array of military force be really designed to affect the action of the government and people of the United States, on the questions now pending between the two nations, then indeed would it be dishonorable to pause a moment on the alternative which such a state of affairs would present to us. Come what may, the explanation which France demands can never be accorded; and no armament, however powerful and imposing, at a distance, or on our coast, will, I trust, deter us from discharging the high duties we owe to our constituents, to our national character, and to the world.

The house of representatives, at the close of the last session of congress, unanimously resolved, that the treaty

of the 4th of July, 1831, should be maintained, and its execution insisted on by the United States. It is due to the welfare of the human race, not less than to our own interests and honor, that this resolution should, at all hazards, be adhered to. If, after so signal an example as that given by the American people, during their long protracted difficulties with France, of forbearance under accumulated wrongs, and of generous confidence in her ultimate return to justice, she shall now be permitted to withhold from us the tardy and imperfect indemnification, which, after years of remonstrance and discussion, had at length been solemnly agreed on by the treaty of 1831, and to set at nought the obligation it imposes, the United States will not be the only sufferers. The efforts of humanity and religion, to substitute the appeals of justice and the arbitrament of reason, for the coercive measures usually resorted to by injured nations, will receive little encouragement from such an issue. By the selection and enforcement of such lawful and expedient measures as may be necessary to prevent a result so injurious to ourselves, and so fatal to the hopes of the philanthropist, we shall therefore not only preserve the pecuniary interests of our citizens, the independence of our government, and the honor of our country, but do much, it may be hoped, to vindicate the faith of treaties, and to promote the general interests of peace, civilization, and improvement.

ANDREW JACKSON.

WASHINGTON, JAN. 15, 1836.

The information thus communicated to congress and the people, as has already been said, created a great sensation. It was indeed a time and an occasion to excite universal interest; and though, as is always to be expected, a considerable diversity of opinion existed among the people, on the probability of a war, in relation to the expediency and propriety of adopting the measures recommended by the president, yet there was a general agreement that something should be done. The partisans of the president, as was to be expected, were united in favor of the measures he had recommended, and many

of the leading members of the opposition, with a feeling alike honorable to their patriotism and liberality, united with them ; all agreed that our claims on France should be insisted on, and that any aggression should be met with firmness and unity on the part of the American people, even to the last extremity.

The subject occupied almost exclusively the attention of congress for several weeks. Numerous schemes and arrangements for national defence were considered and discussed, and for a time war seemed almost inevitable. Happily, however, a resort to hostile measures was avoided ; and even the offered mediation of the English government to adjust and arrange the difficulties, was by subsequent events rendered unnecessary. Immediately on the receipt of the message of January 15th, the French king declared himself satisfied with its explanations. arrangements were promptly made for the payment of the indemnity, diplomatic intercourse was renewed, and satisfactory and honorable relations between the two countries were again established.

The session of congress was protracted till July, and the disposition to be made of the surplus revenue had an important part in their deliberations. The president in his annual message, at the opening of the session, said—

“ The condition of the public finances was never more flattering than at the present period.

“ Since my last annual communication, all the remains of the public debt have been redeemed, or money has been placed in deposit for this purpose, whenever the creditors choose to receive it. All the other pecuniary engagements of the government have been honorably and promptly fulfilled, and there will be a balance in the treasury, at the close of the present year, of about nineteen millions of dollars. It is believed, that after meeting a l outstanding and unexpended appropriations, there will remain near eleven millions to be applied to any new objects which congress may designate, or to the more rapid execution of the works already in progress. In aid of these objects, and to satisfy the current expenditure of the ensuing year, it is estimated that there will be received, from various sources, twenty millions more
n 1836 ”

A prospective surplus of so large an amount was indeed a matter of great moment, and there was but one opinion in relation to the imperative necessity of disposing of it in some way, so that it might not be unemployed in the treasury, or be in any measure withdrawn from the actual business capital of the country. The contingency of a war with France would have made it necessary that it should be appropriated for purposes of national defence, but this contingency was removed by the restoration of harmony between the two countries. At a late period of the session, a bill was passed by both houses, and became a law, directing that the surplus funds of the United States, amounting to \$37,468,859.97, after a reservation of five millions, should be deposited with the several states, in amounts according to their respective representation. Subsequent events, however, prevented the completion of this arrangement.

On the 4th of March, 1837, Martin Van Buren, of New York, entered upon the duties of the office as president, and Richard M. Johnson as vice president, for the ensuing term of four years.

CHAPTER XXVII.

Difficulties with the Seminoles.—Termination of Van Buren's Administration.—Election of W. H. Harrison, President, and John Tyler, Vice President.—Death of President Harrison.—Accession of John Tyler to the Presidency.

THE Seminoles, a tribe of Indians who inhabited a great portion of Florida, dissatisfied with the United States for urging their removal, began to show symptoms of hostility during the summer of 1835. They put to death those chiefs who were in favor of emigration, and murdered a mail-carrier, on the 11th of August, within six miles of Fort Brook, Tampa Bay. These indications of hostility caused General Clinch, the commander of the U. S. troops in Florida, in conjunction with General Call, who commanded a brigade of Florida volunteers, to go in pursuit of the Indians and, if possible, terminate the difficulties

Henry Clay.

Richard M. Johnson.

by a decisive blow. They were obliged to cross the Withlacouchee, on the 31st of December, by a single canoe, instead of finding a good ford, as their guide had promised them. The regulars, and about half the volunteers, had reached the opposite shore, when a deadly fire was poured into the corps, from a force of nearly three times their number, who were sheltered by a swamp. The rest of the volunteers preferred viewing the battle from their safe station on the farther side of the river, nor could Gen. Call induce them to aid their companions.

After an hour's hard fighting, and three gallant charges into the swamp, the savages fled in every direction.

Immediately after the result of this battle was known, the feelings of the whole country were shocked by the intelligence of two dreadful catastrophes, which happened three days previous to the battle on the Withlacouchee. On the 28th of December, a house at Camp King, and within 250 yards of the block house, was attacked by Indians, and General Wiley Thompson, the Indian agent, Lieutenant Constantine Smith, U. S. A., E. Rogers, sutler and two men by the name of Suggs and Hitzel, were killed by a volley of a hundred muskets fired through the windows.

The same day, a few hours earlier, a detachment of 112 men, under the command of Major Dade, on their march from Tampa Bay to Fort King, found themselves surrounded by a body of Indians five times their number, and after a defence as desperate as that at Thermopylæ, all were destroyed except three of the private soldiers who, dreadfully wounded as they were, crawled back to Fort Brook, being unable to stand on their feet. Thus perished Major Dade, Captains Gardiner and Fraser, Lieutenants Mudge, Bassenger, Keayes, and Henderson, Dr. Gatlin, and a hundred and two private soldiers.

The Indian force had not been estimated at its actual strength, and the whole country became exposed to their depredations and outrages, the U. S. troops in the territory being too few and scattered to afford any effectual protection. The plantations were abandoned to be pillaged by the savages, and the inhabitants scarcely felt secure in the towns; even St. Augustine was considered liable to an attack.

Osceola, or Powell, as he was sometimes called, the master-spirit of these movements, had been in the habit of visiting Fort Brooke frequently during the two years previous to taking up arms, and had been allowed to drill with the men, no suspicion being felt of his ulterior designs. On his manifesting a disinclination to emigrate, Wiley Thompson had handcuffed him, and kept him confined for a short time, which outrage he revenged by the attack at Camp King. He made a boast, at the commencement of hostilities, that "the Seminoles would keep the United States at bay for *six years*;" and, improbable as the prediction seemed, when made, it has been verified, though its author did not live to exult in it. Osceola came into Fort Peyton under the protection of the white flag which was displayed by General Jessup, was seized by his order, October 21st, 1837, and sent to Fort Moultrie, Charleston Harbor, South Carolina, where he died in prison, January 30th, 1838, a victim, as was supposed, of violated national faith.

It is impossible, in the limits of this chapter, to give even a brief list of the events of this disastrous war—a war derogatory to the character of the country in its origin, and deplorable in the amount of suffering endured, both by Indians and white men, in its prosecution. Great numbers of brave officers and soldiers have laid down their lives in the course of it, without the satisfaction of knowing that they were fighting on the right side. There is nothing to sustain the spirits of brave men when they feel that defeat is disgrace, and victory, a triumph only of wrong over right—of the strong over the helpless.

One of the last regular battles which has been fought, and one of the most successful, took place on the O-kee-cho-bee, in the southern part of Florida, on the 25th of December, 1837. The U. S. troops were commanded by General Taylor, and the rout of the Indians was complete. In this engagement fell the pious and brave Alexander R. Thompson, Lieut. Colonel of the 6th infantry, as he led his regiment forward to charge the hammock where the Indians were lying concealed. Covered with wounds, he still cheered on his men, until his voice was stilled by death

Since that period the Seminoles have attacked their foes when they could take them unprepared, and in smaller numbers. Within the years 1840 and 1841, a great proportion of the survivors of these destructive campaigns have emigrated; and hopes are now strong, that Colonel Worth and his associates will bring the war to a termination.

A party having grown up in Canada, who were disaffected with the British government, and clamoring for independence, many persons, on the American side of the lines, in Vermont and New York, suffered their feelings to be enlisted in favor of the "Canadian Patriots," as they were styled, and most improperly formed secret associations, which they called "Hunters' Lodges," for the purpose of aiding the Patriots in achieving their independence.

In furtherance of this scheme, a band of adventurers took possession of Navy Island, which contains about 350 acres of land, is situated in Niagara river, about two miles above the celebrated Falls, and belongs to Canada. It was so strongly fortified as to resist the attacks made upon it by Sir Francis Head, the British commander. Governor Marcy, of New York, issued a proclamation enjoining strict neutrality upon the people on the frontier.

In spite of this warning, however, arms and ammunition were purchased, or stolen from arsenals; even field pieces were carried off in the night, and sent to the lines, in aid of the Patriots. The insurgents on Navy Island fired upon the opposite Canadian shore, and boats were blown out of the water by the force of their shot. The occupants of the island, who were about 700, were abundantly supplied with provisions, and furnished with twenty pieces of artillery.

This daring step produced the greatest excitement among the British authorities. A steamboat, named the *Caroline*, was hired by the Patriots, to run between Navy Island and Schlosser, a small town on the American side, a short distance above the falls, in order to supply the islanders with the means of carrying on the war. It commenced running the morning of the 29th of December, 1837, and on the evening of the same day, a party of

150 armed men, in five boats, with muffled oars, went from the Canada side to Schlosser, drove the people who were on board the Caroline ashore, cut her loose from the wharf, and setting it on fire, let it drift over the cataract. In the affair one man was killed, and rumor said that one or more were left in the boat when she was destroyed.

Though there was never any proof of the latter part of the story, the most intense feeling was excited upon the subject. The body of the man killed was taken to Buffalo, and it seemed almost impossible to restrain the populace. The town was filled with armed men, and a brigade of militia was summoned to meet there.

In October, 1840, Alexander McLeod, a resident of Upper Canada, was arrested and committed to jail at Lockport, New York, on the charge of murder, as having been one of the party who destroyed the Caroline. The British government remonstrated, through their minister, against making McLeod answerable for an act in which, if he participated, he was only executing the commands of a superior officer. Notwithstanding this, he was removed to Utica, and confined there until his trial, which took place in October, 1841, when, having proved an alibi, he was set at liberty. Both countries were thus relieved from an embarrassing situation.

When the news of the occupation of Navy Island by American citizens reached Washington, President Van Buren issued the following proclamation.

By the President of the United States of America,

A PROCLAMATION.

Whereas, information having been received, of a dangerous excitement on the northern frontier of the United States, in consequence of the civil war begun in Canada, and instruction having been given to the United States officers on that frontier, and application having been made to the governors of the adjoining states, to prevent any unlawful interference, on the part of our citizens, in the contest unfortunately commenced in the British provinces; and additional information has just been received, that, not-

withstanding the proclamations of the governors of New York and Vermont, exhorting their citizens to refrain from any unlawful acts within the territory of the United States, and notwithstanding the presence of the civil officers of the United States, who, by my directions, have visited the scenes of commotion, with the view of impressing the citizens with a proper sense of their duty, the excitement, instead of being appeased, is every day increasing in degree; that arms and munitions of war, and other supplies, have been procured by the insurgents, in the United States; that a military force, consisting, in part at least, of citizens of the United States, had been actually organized, had been congregated at Navy Island, and were still in arms, under the command of a citizen of the United States, and that they were continually receiving accessions and aid:

Now, therefore, to the end that the authority of the laws may be maintained, and the faith of treaties observed, I, MARTIN VAN BUREN, do most earnestly exhort all citizens of the United States who have violated their duties, to return peaceably to their respective homes; and I hereby warn them, that any persons who shall compromit the neutrality of this government, by interfering, in an unlawful manner, with the affairs of the neighboring British provinces, will render themselves liable to arrest and punishment under the laws of the United States, which will be rigidly enforced; and also, that they will receive no aid or countenance from their government, into whatever difficulties they may be thrown by the violation of the laws of their country, and of the territory of a neighboring friendly nation.

Given under my hand, at the city of Washington, the fifth day of January, A. D. 1838, and the sixty-second of the independence of the United States.

By the President.

M. VAN BUREN

JOHN FORSYTH, *Secretary of State*.

Navy Island was evacuated on the 13th of January, 1838, and the British flag was again hoisted on the 15th. Immediately on landing, Van Renselaer, the leader of the expedition, was arrested, and bailed to appear at the next term of the United States District Court.

The ill feeling engendered by such a state of things has

existed, in a greater or less degree, on the frontier ever since ; and as no decisive steps have been taken by the two governments in regard to the destruction of the *Caroline*, that injury continues to embitter the minds of many against the British, and has also increased the difficulties of the question of boundary between the province of New Brunswick and the state of Maine.

On the 4th of March, 1841, William Henry Harrison of Ohio, was inaugurated President, and John Tyler, of Virginia, Vice President, they having been chosen by a large majority, in 19 of the 26 states. On the 4th of April, just one month after, Gen. Harrison died, after a short illness. His death cast a greater gloom upon the nation than any previous event in its history, except the death of Gen. Washington. His funeral was most impressive, not only from the numbers which attended it but from the grief depicted on their countenances. Almost all the buildings in the streets through which the procession passed were shrouded in black, as were those in the principal cities of the Union, when the sad event was commemorated by funeral rites, sermons, eulogies, &c. Mr. Tyler, who, by the constitution, became President, recommended a day of fasting and humiliation, and it was almost universally observed.

The presidential election of 1844 was conducted with great zeal ; the two parties were in a high state of political excitement. The candidates supported by one party, were Henry Clay, of Kentucky, for President, and Theodore Frelinghuysen, of New Jersey, for Vice President ; the other supported James K. Polk, of Tennessee, for President, and George M. Dallas, of Pennsylvania, for Vice President ; the two latter gentlemen were successful, to hold their office for the term of four years from the 4th of March, 1845.

The census taken in 1840 gives the United States a population of 17,069,453.

William Henry Harrison.

John Tyler.

institution. To the surprise and regret of the friends of this great measure, president Tyler vetoed the bill, nor could he be induced to sanction another bill, creating a "Fiscal Corporation for the United States," which was introduced, and which was supposed to have his entire approbation. The immediate consequence of these repeated vetoes was the dissolution of his cabinet—the several secretaries retiring, with the exception of Mr. Webster, the then secretary of state. From this time all harmony between the president and his former political friends was suspended.

No measures of national importance were adopted during the second session of the 27th Congress, excepting an act apportioning the Representatives among the several States, according to the sixth census. The ratio adopted was 70.680.

Before the close of the session, Mr. Clay, after a continuous service of nearly thirty-six years in the public councils, retired from the Senate, carrying with him the profound respect of all parties, and especially of those of similar political principles.

During the summer of 1842, the exploring expedition, which the government of the United States had equipped and sent out at the national expense, returned, having been absent nearly four years, during which it had sailed nearly ninety thousand miles. The expedition was successful, and the discoveries, surveys, scientific observations, sketches of natural scenery, portraits, specimens in ornithology, &c., made and collected, were highly honorable to the enterprise.

During the same summer, the long agitated and embarrassed question respecting the north-eastern boundary, was finally settled by a treaty arranged at Washington, between Lord Ashburton and Mr. Webster. For half a century, this question had been pending between the two countries—England and America; and serious apprehensions were, on several occasions, entertained of hostilities between the two countries on account of it. Fortunately for the peace of the two nations, Mr. Webster had continued in the cabinet; and fortunate was it that a gentleman of great urbanity and equal judgment was selected by England to

conduct the negotiations in her behalf. On the 10th of November, the President issued his proclamation announcing the ratification of the treaty.

Before the adjournment of the second session of the twenty-seventh Congress, (August 31st,) a bill, modifying in some important particulars the existing tariff, passed both houses of Congress, and received the signature of the President. The first bill introduced was vetoed by the Executive; and, for a time, the friends of the measure had little prospect of effecting their object. But the imperious necessity of the measure, the wants of the national treasury, and the embarrassed condition of various branches of industry, induced Congress to yield to the prejudices of the president. Accordingly, such alterations were made in the bill vetoed, as comported with Mr. Tyler's views, and it received his sanction.

At the next session of Congress, the third of the twenty-seventh, the principal acts passed related to the repeal of the bankrupt law, which had become odious to a large portion of the business men of the country—to suitable provisions for promoting friendly intercourse between the United States and China, and also for carrying into effect the late treaty with Great Britain. By the act relating to intercourse with China, forty thousand dollars were placed at the disposal of the Executive; who nominated Caleb Cushing, of Massachusetts, as commissioner, under the act, to the Celestial Empire. On the 3d of March, 1843, Congress closed its session: and on the 8th of May following, Mr. Webster retired from the Cabinet, and was succeeded in the responsible office of Secretary of State by Hugh S. Legare, of South Carolina.

In June, was celebrated, with great pomp and appropriate ceremonies, the completion of the Bunker Hill monument. This great public work had met with numerous delays: but having, at length, received its topmost stone, the 17th of June, the anniversary of the battle, was assigned to celebrate the event. The president and several members of his cabinet honored the celebration. A multitude of all classes, and from various parts of the country, were present. An oration was pronounced by Mr. Webster on the occasion. The pageant was grand and imposing and

calculated to exalt, in the hearts of the assembled thousands, the virtues and the patriotism of the men, who had in by-gone years moistened the soil on which the monument stands with their richest blood. A sad event, however followed fast upon the festivities of the day—this was the sudden decease of Mr. Legare, the recently appointed Secretary of State. He had followed the president to witness the celebration, but sudden sickness fell upon him, and he died at his lodgings in Boston on the morning after the celebration.

During the following winter, Jan. 8th, 1844, an act passed Congress, refunding a fine, which had been imposed upon Gen. Jackson at the time of the attack upon New Orleans, in the late war with England. The repayment of this fine had been recommended by the president as early as 1842; but the measure had been till now strongly and successfully resisted. It had been imposed on the General by Judge Hall, for his refusal, while commanding the army at New Orleans, to obey a summons to appear before the court, and answer for his disobedience of a writ of habeas corpus. The fine was one thousand dollars. The amount now refunded—fine and interest, was two thousand seven hundred dollars: but the act disclaimed any reflection upon Judge Hall.

In April, Congress was informed by a special message from the president, that a treaty had been negotiated with Texas, by which she was annexed as a territory to the United States. This annunciation excited no small surprise throughout the country, and awakened great solicitude in the minds of those who were opposed to the measure; as, in their view, it involved an extension of slavery and a probable rupture with Mexico, which power laid claim to the republic, as a part of her rightful domain. The treaty, however, was rejected by the Senate; and the object of the President for the present failed.

During the second session of the 28th Congress, an important treaty between the United States and the Chinese Empire was ratified by an unanimous vote of the Senate. This treaty was concluded by Caleb Cushing and Tsiyeng, on the 3d of July, 1844; and by it our relations with

China were placed on a new footing, eminently favorable to the commerce and other interests of the United States.

The rejection of the treaty with Texas by the Senate, instead of cooling, increased the ardor of President Tyler to accomplish his plan of annexation. According to his wishes, and probably at his suggestion, at the following session of Congress, a joint resolution for her annexation was introduced into Congress, and passed the House of Representatives, January 23d, by a vote of 118 to 101. In the senate, the resolution underwent several important amendments, which, having been concurred in by the House, received the sanction of the Executive; and thus the way was prepared, in violation of the Constitution, as many believed, for the annexation of Texas.

On the 4th of March, 1845, the presidential career of Mr. Tyler closed. For a time, he had been before the country as a candidate for re-election, but finding himself sustained by no party, he withdrew from the canvass. The two candidates left in the field were Henry Clay, of Kentucky, and James K. Polk, of Tennessee. These had been nominated by the two great political parties in the country by conventions, which had assembled at the city of Baltimore—one on the 1st, and the other on the 27th of May, 1844. During the contest prior to the election, the friends of the respective candidates used every effort to secure their election. On the votes being counted, in the presence of both houses of Congress, February 12th, it was officially declared, that Mr. Polk was elected. The whole number of votes given was two hundred and seventy-five, of which he had one hundred and seventy. Mr. Clay received one hundred and five. George M. Dallas was elected Vice President over Mr. Frelinghuysen by a similar majority.

James K. Polk.

George M. Dallas.

MR. POLK'S INAUGURATION.—*Formation of the Cabinet—Death of General Jackson—First message of Mr. Polk—Relations with Mexico—Question about Oregon—Admission of Texas—State of the controversy with Mexico—Battle of Palo Alto and Resaca de la Palma—Army increased—Proclamation of war by the President—Discussion in relation to Oregon—Notice to British government in relation to Oregon—Capture of California by Commodore Sloat—Blockade of the Mexican coast—Adjournment of Congress—Bills passed—Bills vetoed—Naval operations—Capture of California—Attack on Alvarado—Capture of Tabasco—Capture of Tampico—Military operations—Capture of Santa Fe—Siege and Capture of Monterey—Battle of Buena Vista—Bombardment of Vera Cruz—Surrender of the Castle San Juan d'Ulloa—Battle of Cerro Gordo.*

AGREEABLY to the Constitution, James K. Polk entered upon the duties of President of the United States, and George M. Dallas, Vice President, on the fourth day of March, 1845. Mr. Polk's elevation to this office was unexpected to both political parties. At the democratic convention held in Baltimore in May of the previous year, Mr. Van Buren was expected to be the prominent candidate; but from various causes, particularly his opposition to the annexation of Texas, his popularity, especially at the south, had diminished. Hence, a plan was projected to supersede him by selecting another candidate; which was accomplished, by requiring a major vote of two-thirds of the delegates present, in favor of the candidates, who should be selected. This rule, now for the first time adopted, was strenuously opposed by the friends of Mr. Van Buren; but the advocates of the change succeeded; and as a consequence a candidate was ultimately selected, whose name, previously to the convention, had scarcely been heard of in connection with the presidency. Once before the democratic party as a candidate, every effort was of course made

to elect Mr. Polk ; and, yet, it is doubtful, whether his friends seriously anticipated success ; be this, however, as it may, so signal a triumph over a rival candidate so distinguished and popular as was Mr. Clay, was unanticipated.

The ceremonies at the induction of Mr. Polk into office were, as usual, grand and imposing, and were witnessed by a great concourse of citizens gathered from all parts of the country. In his Inaugural Address, delivered at the time, he gave, as usual, a summary of his political principles—entering somewhat minutely into the course, which he designed to pursue in the administration of the government. “It will be my first care,” said he “to administer the government in the true spirit of the Constitution, and to assume no power not expressly granted, or clearly implied in its terms.” It would, also, be his aim to see that the general government did not trench on the rights of the states : nor the states overstep the limits of power reserved to them. He expressed himself in opposition to a national bank, and all other extraneous institutions, planted around the government to control or strengthen it, in opposition to the will of its authors. In regard to the adjustment of the revenue laws and the levy of taxes, necessary to support the government, he considered it a fundamental principle to collect no more than would be required by an economical administration. In regard to a tariff, he was in favor of one which, while it furnished an ample revenue, would afford incidental protection to home industry ; but was opposed to a tariff for protection only. He was in favor of the annexation of Texas, and expressed his satisfaction that measures were in progress to effect that object. Our title to Oregon he considered to be “clear and unquestionable.” In the management of our foreign relations, his aim would be to regard the rights of other nations, while those of our own country would be the subject of constant vigilance.—Public officers, especially those entrusted with the collection and disbursement of the revenues, would be held to a strict performance of their duties.

Such is an outline of the Inaugural Address of President Polk. It was in several respects, especially in its pledges, worthy of a high-minded and honest man, while, on the other hand, it contained views in respect to a tariff, the annexation of Texas, and other questions of political

economy, which could meet with no favor from his political opponents.

The formalities of the Inauguration were followed by the formation of a new cabinet, which consisted of James Buchanan, of Pennsylvania, Secretary of State: Robert J. Walker, of Mississippi, Secretary of the Treasury: William L. Marcy, of New York, Secretary of War: George Bancroft, of Massachusetts, Secretary of the Navy; Cave Johnson, of Tennessee, Post-Master-General: and John Y. Mason, of Virginia, Attorney General.

But a few months had the new administration been in power, when an event occurred which was calculated to make a deep impression upon the nation, and especially upon the officers of government. This was the decease of General Jackson, who breathed his last, at his residence in Tennessee, on the evening of the 8th of June.

General Jackson had attained to the 79th year of his age. He had long occupied a conspicuous place in the civil and military history of the country. In many respects he was a remarkable man. He had enjoyed but few advantages for acquiring an education in his early days, and the want of it was not unfrequently betrayed in after life. But he had a surprising power over men. As a soldier, he excelled in courage and vigor; and in perseverance was indomitable. At the head of an army, he evinced great skill and sagacity; he was ever prompt to take advantage of circumstances, and few, if any, were ever more resolute in the execution of a plan or purpose, which they had once formed. That he was stern, no one could doubt; and in military discipline he was thought to be sometimes severe. That in general he had the good of his country in view is admitted by his political opponents, but the wisdom and expediency of the means and measures, which he at times adopted, to secure that good, may be questioned. During his administration, he met with powerful opposition; but few men ever succeeded in carrying forward their own plans more successfully, or triumphed more uniformly over political opposition.

It is said that he died a Christian. On the merits of Jesus Christ, he claimed to found his hopes of acceptance with God; and thus passed away from the turmoils of life,

leaving to the nation and to the world, as the result of his convictions, that the gospel possesses a paramount value, as a sure foundation upon which to rest in reference to a judgment to come. The news of his death was received with due sensibility, and appropriate honors were paid to his memory in all parts of the land.

The foreign relations of the country, on the accession of Mr. Polk, were far from being settled and satisfactory. The annexation of Texas had excited the jealousy and hostility of Mexico, and the prospect of an open rupture with her was steadily increasing. The question as to the title of Oregon was still in dispute between America and England, and was assuming a serious and even alarming aspect. Questions of internal policy, which, it was hoped, had been settled, were likely to be again agitated with a change of administration. On every side there was promise and prediction of an unsettled state of affairs, both foreign and domestic.

The message of the president, on the assembling of Congress in December, 1845, was by no means calculated to diminish the anxiety, which some entertained of approaching trouble. By the joint resolution of Congress, passed at the preceding session, Texas was to be admitted as a state into the Union, upon certain conditions. These the president informed Congress she had complied with, and nothing further remained but the passage of an act (which he strongly recommended should be immediately done) to admit her on an equal footing with the other states.

The relations with Mexico were represented as still more disturbed than when Congress adjourned. The minister of Mexico, resident at the seat of government, had made a formal protest against the annexation of Texas, and had demanded his passports. Diplomatic intercourse with that government had consequently ceased. Besides, the belligerent conduct of Mexico had been such as to require countervailing measures, and he had consequently deemed it prudent to send a strong squadron to the coast of Mexico, and to concentrate a sufficient military force on the western frontier of Texas, between the Neuces and Del Norte. Such, according to the message, was the position of our

relations with Mexico, on the opening of the session of Congress.

In regard to the Territory of Oregon, the president represented to Congress that several attempts had been made to settle all questions pending between the two countries laying claim to it, but without success. Negotiations had been carried on during the administration of Mr. Monroe and Mr. Adams, but they had only resulted in a convention for the joint occupancy of the territory for ten years. Another convention was entered into, August 6, 1827, which continued in force for an indefinite period the article of the prior convention, touching the joint occupancy of the territory, while it provided that at any time after the 20th of October, 1828, either party might annul the convention, by giving the other party a twelve-month's notice.

Here, for several years, the subject had rested. The citizens of each nation had, according to their pleasure, settled upon the territory, or had carried on their hunting operations, in peace and amity. But the statesmen of both countries could not but perceive the importance of settling in due time a controversy, which might one day disturb the relations of the two governments. In 1843, the minister of the United States resident in London brought the subject to the notice of the British government, and made an offer of partition of the territory, similar to that which had been made in 1818 and 1826.

In this state of the question, the negotiation was transferred to Washington, and was renewed by an offer from the British minister (August, 1844,) to divide the territory by the 49th parallel of north latitude, leaving the navigation of the Columbia river to be equally and freely enjoyed by the citizens of both countries. This proposition was immediately rejected by the American Secretary; upon receiving notice of which rejection, the British minister requested that a proposition should emanate from the American government, for an equitable settlement of the controversy.

At this stage of the negotiation, Mr. Polk succeeded to the presidency. Anxious to settle the long pending question, he directed the Secretary of State again to offer the 49th parallel of north latitude, without the free navigation

of the Columbia. This, the British minister rejected, and here the negotiation for a time was suspended.

Such was the state of things, touching this delicate question, on the meeting of Congress. It was apparent to men of observation, that the subject could not long remain in quietness. The territory was fast settling. Jealousies were beginning to exist. Questions as to rights would soon become matters of magnitude, and the longer the controversy was permitted to continue, the less probability existed of its amicable settlement. In this state of things, the president advised that the year's notice, required by the convention of the 6th of August, 1827, should be given to Great Britain. "By so doing," said the president, "at the expiration of a year, we shall have reached a period when our national rights in Oregon must either be abandoned, or firmly maintained."

In his message at the opening of the session, as already noticed, the president recommended the adoption of joint resolutions to admit Texas as a State into the Union. In accordance with this recommendation, joint resolutions were early introduced into the House of Representatives. They were as follows:

"Whereas the Congress of the United States, by a joint resolution, approved March the 1st, 1846, did consent, that the territory properly included within, and rightfully belonging to the republic of Texas, might be erected into a new State, to be called the State of Texas, with a republican form of government, to be adopted by the people of said republic by deputies in convention assembled, with the consent of the existing government, in order that the same might be admitted as one of the states of the Union; which consent of Congress was given upon certain conditions specified in the 1st and 2d sections of said joint resolutions: and whereas, the people of the said republic of Texas, by deputies in convention assembled, with the consent of the existing government, did adopt a constitution, and erect a new state, with a republican form of government, and in the name of the people of Texas, and by their authority, did ordain and declare, that they assented to and accepted the proposals, conditions, and guaranties contained in said 1st and 2d sections of said resolutions:

and whereas, the said constitution, with the proper evidence of its adoption by the people of the republic of Texas, has been transmitted to the President of the United States, and laid before Congress, in conformity to the provisions of said joint resolutions ; Therefore,

“Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of Texas shall be one, and is hereby declared to be one, of the United States of America, and admitted into the Union on an equal footing with the original states in all respects whatever.

“Be it further enacted, That until the Representatives in Congress shall be apportioned, according to an actual enumeration of the inhabitants of the United States, the state of Texas shall be entitled to choose two Representatives.”

It was scarcely within the reasonable hopes of the opposers of the annexation of Texas, that after the adoption of the measures, with that object in view, by the preceding Congress, the present Congress would do any thing, by which to prevent her admission into the Union. A few, perhaps, indulged the belief, that further proceedings might be stayed ; and with that object in view, petitions and remonstrances were sent in from various parts of the Union. The President had, indeed, in his message congratulated Congress and the nation that “this accession (of Texas) to our territory had been a bloodless achievement. No arm of force had been raised to produce the result. The sword has had no party in the victory. We have not sought to extend our territorial possessions by conquest, or our republican institutions over a reluctant people.” This was admitted by the opposite party, but they predicted war as a consequence, and this danger of a collision with Mexico they would have avoided, by preventing the admission of Texas. Besides, the extension of slavery was more distressing to many in all quarters of the Union ; and, moreover, it was urged that it was of dangerous tendency and doubtful consequences, to enlarge the boundaries of this government or territory, over which our laws are now established. “There must be some limit,” said a wise and aged statesman, “to the extent of our territory if we would make our institutions permanent.”

The opposers of annexation in various parts of the country, were anticipating a warm and exciting debate on the subject in Congress, and members of that body, who represented this party, were themselves, it is believed, prepared to present strong, and to themselves, satisfactory reasons, why the project should be abandoned. But to the surprise of all, when the subject came up for consideration, discussion was prevented by an early movement of the previous question. To such a summary process strong remonstrances were made ; but to the friends of the measure in Congress, who believed the most valuable benefits would result to the Union by its consummation, debate seemed needless ; and consequently, the resolutions were urged to a speedy adoption. On the 16th of December the question was taken, and the resolutions were adopted by a majority of 141 to 56. A few days after they received the sanction of the Senate. In this latter body, however, an opportunity was given for the opposers of annexation to urge their objections. This was done with great dignity ; but a majority in the Senate, as in the House, if not in the country, were found in favor of the measure.

Thus by a novel, and to many an unconstitutional process, was Texas admitted into the Union, and “without any intermediate time of probation, such as other territories had undergone before their admission, she was vested with a right to send *two* Representatives to Congress, while her population was insufficient to entitle her to one, except, under the specific provision of the Constitution, that each state shall have at least one Representative.”

We again resume the history of affairs with Mexico.—Late in the Autumn of 1845, the American government commissioned the Hon. John Slidell, of Louisiana, to proceed to Mexico as envoy to bring to an amicable close all questions in dispute between the two governments. But on reaching his place of destination, the existing government of Mexico refused to receive him in his diplomatic character. After a residence of some months, in the neighborhood of the capital, and repeatedly bringing the subject of his reception to the notice of the Mexican government, he was obliged to return to the United States, without having effected a single object of his mission. This rejection of

Major General Winfield Scott.

Major General Zachary Taylor.

its envoy was the more offensive to the American government, from the fact, that, previous to his appointment, assurances had been received from the Mexican government, that an envoy entrusted with adequate powers would be received.

Prior, however, to the final rejection of Mr. Slidell, but under an apprehension that such an indignity would be offered both to the envoy and his government, the president directed General Taylor, in command of the American forces at Corpus Christi, in Texas, to break up his encampment at that place, and concentrate his forces on the left bank of the Del Norte. In obedience to these orders, a movement of the troops from Corpus Christi commenced on the 11th of March, 1846, and on the 28th an encampment was formed opposite Matamoras. About the same time a depot was established at Point Isabel, near the Brazos Santiago, some thirty miles in the rear of the American camp.

For years, the Mexicans had claimed the Neuces to be the proper dividing line between themselves and Texas. The passage of this boundary, therefore, by the American army, gave great offence to the Mexicans, who considered this an act of invasion. Nor was a large portion of the American people convinced either of the justice, or expediency of the measure. Instead of leading to peace, it was apparent that it would serve to increase the misunderstanding already existing, and end in open and possibly long protracted warfare. It was indeed claimed by Texas, that her territory extended to the Rio Grande; but this being a disputed point, the invasion of the territory was deemed impolitic and belligerent.

The Mexican General, Ampudia, at this time commanding at Matamoras, naturally indignant at seeing a hostile force in his immediate vicinity, warned General Taylor to retire, and that within the space of twenty-four hours. Just at this juncture, Ampudia was succeeded in command by Arista, an officer of still more enterprise and determination. The latter, on taking command, communicated to General Taylor, that unless he retired, he should consider that hostilities had begun. That same day, blood—the first blood was shed. A party of American dragoons, con-

sisting of sixty-three, who had been on a reconnoitring expedition up the Del Norte, was attacked by a body of Mexicans, and sixteen were killed and wounded, and the remainder captured.

The force under command of the American General before Matamoras was far from being adequate to any hostile movement, and scarcely sufficient for defence. In view of this fact, and, indeed, in anticipation of such inadequacy, the president had authorized a call upon the governor of Texas for four regiments, and a similar number from the governor of Louisiana. These regiments were expected to add about 5,000 men to the force of General Taylor. But before they had reached the American camp, the situation of the army had become critical and alarming. The Mexican force was gradually augmenting, and their means of attack or defence increasing. Among the Americans the stock of provisions was getting low, and communication with Point Isabel was liable to be interrupted. Finding his situation critical on this account, General Taylor set out on the 1st of May leaving a garrison of 700 or 800 men to defend the camp, and succeeded in reaching Point Isabel without molestation.

His departure was, however, the signal for an attack upon the American camp, which occurred on the 3d. The assault was two-fold—one from the batteries, on the opposite side of the river—and the other by means of a detachment of troops, which had crossed the river for the purpose of approaching in the rear. Both attacks were without success. The Mexican batteries were soon silenced, and the troops in the rear repulsed with considerable loss. The Americans lost but a single man.

The next object, and one of great importance to the Mexicans, was to intercept General Taylor, on his return from Point Isabel, and, if possible, to destroy the force with him. This it was thought would lead to an easy victory over the garrison opposite Matamoras. With this in view, the Mexican force took post at Palo Alto; and here, on the 8th, occurred the memorable battle of that name, and which will long be remembered for the desperate spirit which was manifested by both armies, and for the signal triumph of the American arms over an enemy more than twice as

Battle of Palo Alto.—Fall of Major Ringgold.

Battle of Resaca de la Palma.

N. BROWN. SC.

numerous. The Mexican troops consisted of five thousand infantry—seven pieces of artillery, and eight hundred cavalry. The force of the Americans was two thousand and three hundred infantry—two eighteen-pounders, and two light batteries. The loss of the Americans was comparatively small; yet they had to regret the loss of a brave officer in Major Ringgold. Captain Page was severely wounded, and died a short time afterwards. General Arista, in his official report, admitted the Mexican loss to be—in killed, ninety-eight; wounded and missing, one hundred and forty-two. The American army, the following night, encamped on the ground.

But the contest was destined to be renewed the following day, with even more severity, and with greater sanguinary results. The American army was put in motion in the morning, with a fair prospect of reaching their camp: but when within a few miles of it, they were suddenly attacked at a place called Resaca de la Palma, and a battle ensued, of shorter continuance than that of Palo Alto, but attended with greater loss to both contending forces. The Americans were again triumphant, capturing eight pieces of artillery, three standards, large quantities of ammunition, and several hundreds of prisoners, among whom was General La Vega. The loss of the Americans, in both actions, as returned by General Taylor, was three officers and forty men killed—thirteen officers and one hundred men wounded. The Mexican loss, officially reported, was one hundred and fifty-four officers and men killed; two hundred and five wounded; missing, one hundred and fifty-six. Having no means of throwing his army across the river, General Taylor was unable to follow up the advantage gained over the enemy by pursuing them, as he would gladly, and, in that case might have successfully done; but, yielding to necessity, he now directed his march towards his encampment opposite Matamoras, where he arrived without further molestation.

Time elapsed ere the news of these victories reached the government at Washington: but already had the critical state of the American army become known, both to the government and to the people of the United States. The war was not popular. It was deemed both impolitic and unne-

cessary. but when intelligence was received that the American General and his troops were destitute of supplies—were surrounded by a greatly superior force, and were nence in imminent danger, a deep and wide-spread sympathy sprung up, and an unanimous and simultaneous desire was expressed, that not only adequate supplies should be promptly forwarded, but that a force in every respect competent should be raised, to relieve the army, and to prosecute the war to a speedy and successful issue. Congress itself, then in session, were actuated by similar sentiments, and by a similar impulse. An act accordingly was soon passed, authorizing the President to employ the forces of the United States, naval and military, and also to call for and accept of the services of any number of volunteers not exceeding fifty thousand, either cavalry, artillery, infantry, or riflemen. Besides the above, the regular army was increased several thousands.

Simultaneous with the passage of the above act, the President issued his proclamation, announcing the existence of war, “by the act of the republic of Mexico,” and calling upon the citizens of the United States to unite in preserving order, and in maintaining the honor of the nation.

We turn again to the subject of the Oregon territory, and the issue of the long pending question respecting the claims of America and England to its soil. The President had, as has been noticed, advised to terminate the convention of August 6, 1827, by giving England the notice required by an article therein. At length, the subject came up for consideration, and seldom has a question elicited warmer or more protracted discussion. Every member felt that the subject was one of great delicacy, and pregnant with events of solemn import to the nations concerned, and perhaps to the world. It was an experiment, which might lead to the happiest results—a final and amicable settlement of a long-standing controversy, or it might terminate in dire and lasting war.

The debate, as was natural, took a wide range, and involved many collateral subjects for consideration. Several modes were suggested, according to which the notice was proposed to be given. At length, on the 16th of April, the

Charge of Capt. May, at the Battle of Resaca de la Pal

Surrender of Gen. La Vega.

question was taken in the senate on a resolution, which had originated in the house and been amended in the senate, to give said notice, and decided in the affirmative by a majority of forty to fourteen. On being returned to the house, the latter agreed to the senate's amendments, but added still further amendments. These latter, however, were negatived by the senate, and the house insisting, a conference was solicited by the latter. Their being accepted by the senate, a committee of conference was appointed, who reported the following preamble and resolution, which passed the senate by a vote of forty-two to ten, and the house by a vote of one hundred forty-two to forty-six.

"A Joint Resolution concerning the Oregon territory.— Whereas, by the convention concluded the twentieth day of October, eighteen hundred and eighteen, between the United States of America and the King of the United Kingdom of Great Britain and Ireland, for the period of ten years, and afterwards indefinitely extended and continued in force by another convention of the same parties, concluded the sixth day of August, in the year of our Lord one thousand eight hundred and twenty-seven, it was agreed that any country that may be claimed by either party on the northwest coast of America westward of the Stony or Rocky mountains, now commonly called the Oregon territory, should, together with its harbors, bays, and creeks, and the navigation of all rivers within the same, be "free and open" to the vessels, citizens, and subjects of the two powers, but without prejudice to any claim, which either of the parties might have to any part of said country; and with this further provision, in the second article of the said convention of the sixth of August, eighteen hundred and twenty-seven, that either party might abrogate and annul said convention, by giving due notice of twelve months to the other contracting party—

"And whereas it has now become desirable that the respective claims of the United States and Great Britain should be definitely settled, and that said territory may no longer than need be remain subject to the evil consequences of the divided allegiance of its American and British population, and of the confusion and conflict of national jurisdictions dangerous to the cherished peace and good understanding of the two countries—

“With a view, therefore, that steps be taken for the abrogation of the said convention of the sixth of August eighteen hundred and twenty-seven, in the mode prescribed in its second article, and that the attention of the governments of both countries may be the more earnestly and immediately directed to the adoption of all proper measures for a speedy and amicable adjustment of the difficulties and disputes in respect to said territory—

“Resolved by the Senate and House of Representatives of the United States, in Congress assembled, That the President of the United States be, and he is hereby authorized, at his discretion, to give the British government the notice required by its said second article for the abrogation of the said convention of the sixth of August, eighteen hundred and twenty-seven.”

Thus was decided a question, which had greatly agitated the entire country, and which in the progress of discussion had occasioned observations and reflections strongly calculated to disturb the harmony of the two governments, and which, in the opinions of some, were designed to produce such an effect. But the folly and guilt of engendering war between two nations so allied, and in which Christian principle was bound to hold sway, was, on several occasions, and by some of the principal men of the nation, pointed out. Solemn warning was given to those, who would madly have rushed to arms by setting up claims of doubtful validity, and which, it is well known, would never be acceded to by the British government. But, at length, the troubled waters grew calmer; and, while to a small portion of Congress and of the nation, the resolutions adopted were still obnoxious, a vast majority of the people were gratified at their mild and conciliatory tenor.

It still remained to be known, in what spirit this resolution would be received by her Majesty's government: but it was devoutly desired that it might lead to a final and harmonious settlement of all questions pertaining to the territory of Oregon. And so it resulted, fortunately for the peace of the two powers immediately concerned, and to the peace of the continental powers of Europe.

On the 28th of April, the President gave official notice to her Majesty, Queen Victoria, that “the convention of Au-

June 6th, 1827, would terminate at the end of twelve months from and after the delivery of these presents."

Before the delivery of this notice, however, the subject of an amicable settlement of all questions relating to Oregon, had occupied her Majesty's government, and on the 18th of May, Mr. M'Lane, our Minister, informed Mr. Buchanan that the British Minister at Washington would soon receive instructions to submit a new and further proposition, on the part of the British government, for a partition of the territory in dispute.

On the 10th of June, the President made a special and confidential communication to the Senate, informing that body that such a proposal had been made, and requesting their advice as to the action, which, in their judgment, it was proper to take in reference to it. At the same time he reiterated the views, which he had expressed in his annual message, "that no compromise, which the United States ought to accept, could be effected;" "that our title to the whole of Oregon" was maintained "by irrefragable facts and arguments," and that the claim "could not be abandoned, without a sacrifice of both national honor and interests." Such was the tenor of the President's communication. But he solicited advice.

On the 12th, the Senate adopted, 38 to 12, the following resolution: "*Resolved*, (two-thirds of the Senate concurring,) That the President of the United States be and he is hereby advised to accept the proposal of the British government accompanying his message to the Senate, dated June 10th, 1846, for a convention to settle boundaries, &c., between the United States and Great Britain, west of the Rocky or Stony mountains."

On the 16th of June, the President communicated to the Senate a copy of a convention, or treaty, which had been concluded and signed on the 15th inst., settling boundaries, &c., in relation to Oregon—whereupon the Senate, by a vote of 41 to 14, advised and consented to the ratification of the same.

The two principal articles of this treaty are as follows:

"Art. 1. From the point on the 49th parallel of north latitude, where the boundary laid down in existing treaties and conventions between Great Britain and the United

States terminates, the line of boundary between the territories of her Britannic Majesty and those of the United States shall be continued westward along the 49th parallel of north latitude, to the middle of the channel which separates the continent from Vancouver's Island, and thence southerly through the middle of the said channel, and of Fuca's Straits, to the Pacific Ocean; provided, however, that the navigation of the said channel and straits, south of the 49th parallel of north latitude, remain free and open to both parties.

"Art. 2. From the point at which the 49th parallel of north latitude shall be found to intersect the great northern branch of the Columbia river, the navigation of the said branch shall be free, and open to the Hudson's Bay Company, and to all British subjects trading with the same, to the point where the said branch meets the main stream of the Columbia, and thence down the said main stream to the ocean, with free access into and through the said river or rivers—it being understood, that all the usual portages along the line thus described, shall in like manner be free and open. In navigating the said river or rivers, British subjects, with their goods and produce, shall be treated on the same footing as citizens of the United States—It being, however, always understood, that nothing in this article shall be construed as preventing or intended to prevent the government of the United States from making any regulations, respecting the navigation of the said river or rivers, not inconsistent with the present treaty."

Thus was finally settled, (ratifications being afterwards duly exchanged, a question, which had involved the two governments in discussions long and wearisome for a series of years; and which in its progress, was threatening the peace and amity of the two nations. The treaty thus confirmed was not in all its provisions quite acceptable, nor was it considered the most advantageous that could have been negotiated; but the Senate received, as it was entitled to, the thanks of the country for terminating a controversy fraught with dangers every month that it continued.

Congress terminated its long and important session on the 10th of August. In addition to its proceedings, already developed in these pages, several bills were passed, among

which was one for the protection of citizens resident in the territory of Oregon—a bill for the establishment and regulation of the sub-treasury—a bill for the improvement of certain rivers and harbors in the United States—and a bill to indemnify citizens of the United States for “French spoliations.”

The “harbor bill,” as it was denominated, had special reference to the improvement of harbors on the western waters. The greatest benefits had been anticipated from liberal appropriations to this object, as many of the harbors on the lakes were in an exposed and insecure condition. Great was the disappointment, therefore, when it was announced that the president had vetoed the bill, not only because of constitutional objections, but because the money would be needed in carrying on the existing war. Loud complaints were uttered, and strong opposition to the president in all that region was predicted.

Another class of citizens were disappointed, whose claims to relief were beyond all dispute. These were sufferers on account of “French spoliations.” For years had they attempted, but in vain, to secure the favorable attention of Congress to a subject which should long since have been acted upon, and indemnity granted, according to the pledges of the American government. And now, that both houses of Congress had done some small justice, it was deemed both cruel and oppressive in the President to add his veto to this bill also, especially as it had received the decided sanction of both Senate and House of Representatives.

It may be added, that near the close of the session a measure of great importance was adopted, viz., an essential modification of the tariff established in 1842. Few subjects were discussed with more eminent ability during the session. The impolicy and suicidal influence of the proposed alteration, were strongly urged by the friends of manufacturers, and the most serious consequences predicted to various branches of industry, left by the bill without adequate protection. But the democratic party stood pledged to alter the tariff of 1842, and accordingly the whole strength of that party was summoned to carry the measure through Congress. The bill passed the House by the considerable majority of nineteen votes: in the Senate, however, such

was the doubt existing as to the expediency of the measure, notwithstanding the encomiums passed upon it by its advocates, that it was carried only by the casting vote of the Vice-President.

Having detailed, with some particularity, the proceedings of Congress to the close of its session, we revert to the operations of the government in relation to the war with Mexico, from and after the battles of Palo Alto and Resaca de la Palma.

Naval operations.—On the 7th of June, 1846, Commodore Sloat, commander of the naval force of the United States in the Pacific ocean, received information, at Mazatlan, of the existing war between the United States and Mexico. On the following day he sailed in the frigate *Savannah* for the coast of California, and on the 2d of July, entered the harbor of Monterey. On the 7th, he demanded a surrender of the place. This being evaded, an adequate force was landed from the squadron, and took possession of the town, and raised the flag of the United States, without opposition or bloodshed. On the 9th, Commander Montgomery, of the sloop *Portsmouth*, under the Commodore's orders, with like success took possession of Francisco, and that part of the country, in the name of the United States. On the 17th, he dispatched a detachment as far as the Mission of St. John's, to hoist the flag of the United States there. On his arrival, however, he found that the place had been captured an hour or two previously by Lieutenant Colonel Fremont, of the United States army, with whom he returned to Monterey on the 19th.

On the 15th of July, the frigate *Congress*, Commodore Stockton, arrived at Monterey. The health of Commodore Sloat being infirm, he delivered up the command of the squadron to the former, with an intention of returning to the United States.

On the 25th of July, the *Cyane*, Captain Mervine, sailed from Monterey, with Lieutenant-Colonel Fremont, and a small volunteer force on board, for San Diego, to intercept the retreat of the Mexican General Castro. A few days after, Commodore Stockton sailed in the *Congress* for San Pedro, and with a detachment from his squadron, of three hundred and sixty men, marched to the enemy's camp. It

was found that the camp was broken up, and the Mexicans, under Governor Pico and General Castro, had retreated so precipitately that Lieutenant-Colonel Fremont was disappointed in intercepting them. On the 13th, Commodore Stockton was joined by this gallant officer, and marched a distance of thirty miles from the sea, and entered, without opposition, the Ciudad de los Angeles, or City of the Angels, the capital of California. And on the 22d of August, the flag of the United States was flying at every commanding position, and California was in the undisputed military possession of the United States.

Soon after taking possession of California, Commodore Stockton issued his proclamation, constituting a new government, appointing its officers, and declaring himself Governor of the territory, by authority of the President of the United States.

While these events were transpiring in the Pacific, the "Home Squadron," under Commodore Conner, was attempting a reduction of Alvarado, on the south part of the Gulf of Mexico, and the capture of the enemy's vessels of war in that river. Owing, however, to the rapidity of the current, he was obliged to abandon his design, and withdraw his force.

On the 15th of October, however, he made another attempt to enter the Alvarado river for the same purpose. In endeavouring to cross the bar, one of the steamers, having in tow the principal division of the attacking force, grounded and became entangled with the vessels in tow. The current could not be overcome in the state of the wind without the aid of steam, and the commodore had the mortification of being compelled to retire.

On the 16th of October, Commodore M. C. Perry, with the steamer Mississippi and the small vessels, left the squadron at Lizardo, and sailed for Tabasco. On the 23d he arrived off the bar, and with great judgment and gallantry captured the town of Fronteira, with the enemy's steamers and vessels in port, and proceeded up the river a distance of seventy four miles, into the interior of a settled country, and appeared before the city of Tabasco. He captured the vessels in the port; and, at the earnest request of the foreign merchants, humanely determined not to involve them

in ruin, by destroying the town. In dropping down the river, one of his prizes grounded, and a large body of Mexicans opened a furious fire on her, which was promptly returned with great effect—the stranded vessel was got afloat, and the Mexicans beaten off. But in this treacherous attack, one American seaman was killed, and Lieutenant Charles W. Morris and two seamen were wounded. Lieutenant Morris survived until the 1st of November, when he died of his wound, on board the Cumberland.

On the 12th of November, Commodore Conner sailed with a large portion of his squadron, and on the 14th the important town of Tampico capitulated unconditionally without resistance. Three fine gunboats and other property fell into the hands of the captors. In the capture of Tampico, the Mexicans lost one of their most considerable ports in the Gulf. Arrangements were immediately made to garrison the place—the command of which was given to an officer of the army.

Military Operations.—Congress having authorized the President, as already noticed, to accept the service of volunteers, not exceeding fifty thousand, a call for that purpose was made upon several of the states for twenty-six regiments, amounting in all to about twenty-three thousand men, to serve for the period of twelve months, or to the end of the war. Much the largest portion of this force was designed to co-operate with the regular army under General Taylor, then on the Rio Grande. After establishing his base of operations on that river for several hundred miles, he moved into the enemy's country in the direction of Monterey, in the department of New Leon. Another portion was concentrated, under General Wool, at San Antonio de Bexar, for a movement upon Chihuahua; and the volunteers from the State of Missouri assembled at Fort Leavenworth, to compose, with a few hundred regular troops, an expedition to Santa Fe, under General Kearney.

The operations of the force under Generals Kearney and Taylor have resulted in important accessions to the military acquisition of the country, while it is supposed Coahuila and Chihuahua have been in effect wrested from Mexico by the force of General Wool.

On the 30th of June, General Kearney, with the force

under his command, amounting, in all, to about 1,600 men regulars and volunteers, moved from Fort Leavenworth upon Santa Fe, where he arrived, after a march of 872 miles, on the 18th of August, and took military possession of New Mexico without resistance. The Mexican forces, about four thousand in number, which had been collected near that city under the late governor, Armijo, to oppose his progress, dispersed on the approach of our troops, and the governor himself fled with a small command of dragoons in the direction of Chihuahua.

Having thus taken possession of New Mexico and its capital, Santa Fe, General Kearney proceeded to establish a provisional government, proclaiming himself governor, and appointing several civil officers to act under his authority.

With a regular force of about three hundred dragoons, leaving orders for a part of the volunteers to follow, he commenced his march from Santa Fe for California, intending to proceed down the Rio Grande about two hundred miles, thence to strike across to the Gila, and to move down that river near to its mouth, then across the Colorado to the Pacific, where he hoped to arrive about the last of November. After proceeding about 180 miles on his route, he was met by an express from California, sent by Lieutenant Colonel Fremont. On learning the condition of things in that quarter, and deeming that an additional force would not be required in California, he directed most of that with him to return to Santa Fe. Selecting about one hundred men to accompany him, he continued on his route.

While these events were in progress, preparations were making by the hero of Palo Alto and Resaca de la Palma, to push his conquests west of Matamoras, which had already fallen into his hands. His next object was the capture of Monterey, the capital of New Leon.

On reaching the city, on the 19th of September, it was found to be strongly fortified: a large work had been constructed, commanding all the northern approaches, added to which the Bishop's palace and some heights in its vicinity near the Saltillo road, had been fortified, and occupied with the troops and artillery. A close reconnoissance of the several works, however, convinced General Taylor of the practicability of throwing forward a column to the Saltillo

road, and thus turn the position of the enemy. This duty was assigned to General Worth; who, on the afternoon of the 20th, led his division, the second, to the attempt; General Taylor, meanwhile, directing a strong diversion in his favor by an attack in front of the town by the first division, under General Twiggs, and the first division of volunteers under Major General Butler. That night General Worth and his troops occupied a defensive position, just without range of a battery above the Bishop's palace. The diversion in favor of General Worth's division was successful, and one of the enemy's advanced works was carried, and a strong foothold had in the town. Early in the morning of the 21st, the advance of the 2d division had encountered the enemy in force, and after a brief but sharp conflict, repulsed him with heavy loss. General Worth then succeeded in gaining a position on the Saltillo road—thus cutting off the enemy's line of communication. From this position, the two heights south of the Saltillo road were carried in succession, and the gun taken in one of them turned upon the Bishop's palace. On the 22d, the heights above the Bishop's palace were carried, and soon after, the palace itself, and its guns turned upon its fugitive garrison.

During the night of the 22d, the enemy evacuated nearly all his defences in the lower part of the city. On the morning of the 23d, the troops advanced from house to house, and from square to square, until they reached a street but one square in rear of the principal plaza, in and near which the enemy's force was now mainly concentrated.

At this stage of operations, General Taylor, deeming it expedient to make no further attempt upon the city, without complete concert as to the lines and mode of approach, (General Worth being at the northern extremity of the city and advancing from that direction) dispatched a messenger to the latter, directing him to suspend his advance, until he, General Taylor, could have an interview with him.

Early on the 24th, the Mexican General Ampudia, proposed to evacuate the town: a suspension of hostilities was arranged till 12 o'clock, during which, at the request of Ampudia, General Taylor had an interview with him, which resulted in a capitulation, placing the town and the materiel

Storming of Monterey

View of Tampico

of war, with certain exceptions, in the possession of the American General.

The place, on taking possession of it, was found to be of great strength. There were mounted 42 pieces of cannon. The Mexican force consisted of seven thousand troops of the line, and two thousand or three thousand irregulars. The American force was four hundred twenty-five officers and six thousand two hundred and twenty men. The artillery was one ten-inch mortar; two twenty-four pounder howitzers, and four light field batteries of four guns each.

The American loss was twelve officers, and one hundred and eight men killed; thirty-one officers and three hundred and thirty-seven wounded. The loss of the Mexicans was still more considerable.—An armistice was allowed by General Taylor, of eight weeks, subject to be revoked by either government. On receiving intelligence of the armistice, and its conditions, the American government, it is said, directed its termination. The Mexican army was permitted to retire, and marched out with the honours of war.

The capture of Monterey, considering the manner in which it was fortified, and the number of soldiers concentrated to defend it, was a bold and daring achievement. The annals of war seldom disclose greater wisdom on the part of a commanding officer, or greater valor and determination on the part of troops, than was manifested by General Taylor and his army at the siege of Monterey.

For several months following the capture of Monterey, the American forces were employed in various military movements, having for their object the occupation of several places in the vicinity. But on the 31st of January, with about five thousand men, Gen. Taylor left Monterey for Saltillo, a distance of sixty-five miles in the direction of San Luis Potosi. On the 2d of February he reached Saltillo, whence he proceeded about twenty miles farther, taking a position at Agua Nueva. At this point, on the twentieth of February, intelligence was communicated to him that Gen. Santa Anna was at the hacienda of Encarnacion with a large force, and was meditating an attack.

As the camp of Agua Nueva could be turned on either flank, and the enemy's force, especially of cavalry, was

greatly superior to his own, he deemed it expedient to retire to the hacienda of Buena Vista, about eleven miles nearer to Saltillo, and there awaited an attack, for which all necessary preparations were made, and such positions taken as were admirably adapted to resist a large with a small force.

On the 22d, early in the morning, the enemy made his appearance, and at two o'clock in the afternoon a demand was made by General Santa Anna, requiring General Taylor to surrender at discretion. This was promptly refused; immediately upon which, various skirmishes ensued, and were continued without intermission until dark.

It was now apparent that a general battle was at hand. The Mexican General had more than twenty thousand men, completely organized, and elated with the prospect of routing a force of less than five thousand, of which not more than five hundred were regular troops. It was a night of proud anticipation on the one side, and of strong determination on the other. The odds were fearful, but what the Americans lacked in point of numbers they were determined to supply by superior skill and characteristic bravery.

At sunrise, on the following morning, the contest was renewed, and with slight intermissions was continued on both sides until night. By means of his immensely superior force, the Mexican General, at one time, drove the American army for some distance, but at a moment the most critical, two pieces of artillery were brought to bear upon the enemy, throwing canister and grape so thickly—so destructively, as to compel him to halt. "Yet, for several hours," says the Hero of Palo Alto, "the fate of the day was extremely doubtful, so much so that I was urged by some of the most experienced officers to fall back and take up a new position." This advice, however, was declined, and the struggle went on, which according to the American General's report, was the severest contest which he had ever witnessed. Night only put a stop to the contest, and, strange to say, both armies occupied the same position they did in the morning before the battle commenced.

All that night the Americans lay upon their arms, as they had done the two previous ones, there being no fire to be had, and the mercury below the freezing point; ready, and expecting to renew the contest on the following morning. The twenty thousand Mexicans, however, had witnessed a sufficient display of American prowess. Leaving their killed and many of their wounded on the field, they retreated during the night, proceeding in the direction of San Luis, in a wretched and disorganized condition.

Few victories, whether in ancient or modern times, have been more remarkable. The skill and experience of Santa Anna are well known, and yet with a regularly formed and well disciplined army of 20,000 men, that skill and experience were insufficient to cope with the army of General Taylor, supported as he was by less than one quarter of the enemy's number.

The loss on both sides was great—amounting on the American side to two hundred and sixty-seven killed, four hundred and fifty-six wounded, and twenty-three missing. The Mexican loss in killed and wounded probably reached two thousand. At least five hundred of their killed were left upon the field of battle. The loss of American officers was severe—twenty-eight having been killed on the field—and among them may be mentioned, as conspicuous not only for their grade, but for their great skill and bravery—Capt. George Lincoln, Assistant Adj. General—Cols. Hardin, McKee, Yell, and Lieut. Col. Clay, the latter being a son of the distinguished American statesman of that name.

For some months the attention of the American Government had been directed to preparations for an expedition against Vera Cruz, the principal sea-port of Mexico, on the Gulf of Mexico, and the castle San Juan d'Ulloa, the latter situated on a small island a short distance from the city. The reduction of these places was thought to be important, as thereby a favorable route would be opened to the capital itself, about three hundred miles in a north-westerly direction. This expedition was entrusted to General Scott, who, aware of its difficulties and importance,

was allowed to collect a large military and naval force for the object contemplated. His troops, consisting of regulars and volunteers, to the number of some thirteen thousand, were in the first instance collected at Tampico, a Mexican sea-port at this time in possession of the Americans. Most of the regular troops belonging to the army of General Taylor were detached for this purpose, and hence that officer was left with a comparatively small force with which to meet the thousands of soldiers under Santa Anna at the battle of Buena Vista.

On the 2nd of March, the above thirteen thousand men were landed by the American navy in the vicinity of Vera Cruz, without the loss of a single life. On the 13th, the investment of the city was effected. On the 22d the preparations were completed, and on that day the American commander-in-chief demanded of the Governor a surrender of the city; and urged that surrender by considerations drawn from a desire to spare that beautiful city—its gallant defenders from a useless diffusion of blood—and more than all, its women and children from the inevitable horrors of a triumphant assault. The Governor replied, that city and castle were defended at all points, and that the American General might commence his operations in manner and form as he pleased. The naval force designed to co-operate in the bombardment was far greater than had ever before been sent into action by the United States government.

On receiving this refusal of the Governor to surrender the city, seven mortars in battery were opened upon the city, which soon after were increased to ten, and about the same time two steamers and five schooners opened a brisk fire, which continued with intermissions up to nine o'clock on the following morning. On the 24th, at daylight, a naval battery, of three thirty-two pounders and three eight-inch Paixhan guns, which the previous day had been transported from the navy, with incredible difficulty, a distance of three miles, over a sandy and difficult route, to a commanding height, within seven hundred yards of the city, was prepared to open its terrible fire upon the unsuspecting place. The destruction caused by these guns

was tremendous. During the whole of the 24th and 25th, the bombardment was continued with few intermissions, and during the same period, both from the castle and the city, the Mexicans returned the fire—but with comparatively little loss on the side of the Americans.

Early on the morning of the 26th, the work of destruction having been completed,—the Governor offered to surrender the city and castle into the hands of the American General. By the terms of capitulation, the garrisons were to be surrendered as prisoners of war, and all the *materiel* of war, and all public property, were to belong to the United States. The four thousand troops belonging to the Mexican army were dismissed upon their parole of honor. Not less than six thousand seven hundred shots and shells were thrown from the American batteries, during the bombardment—weighing, in the aggregate, more than four hundred thousand pounds. Some estimate may be formed by the reader, of the destruction which must have been caused, when he learns that three thousand ten-inch shells were thrown, each one of which weighed ninety pounds, and one thousand Paixhan shot, of sixty-eight pounds weight.

On entering the city, the American officers were met with the sad and sickening sight of roofs crushed—walls demolished, buildings razed.

“No power of language,” observes a writer, “can portray the sufferings, agony, despair, and helpless misery, which the inhabitants of Vera Cruz had endured for five days and nights previous to the cessation of hostilities. Night and day, during that time, they had endured an incessant shower of heavy shells, which, falling in every part of the city, crushed roof and walls in their terrible descent, and at length burst with terrific violence, tearing every thing into fragments, and striking terror and despair into every heart. To all of this, the naval battery added its awful fire, crushing their last hope of safety and escape. The number of killed and wounded will, perhaps, never be known to us, but it must have been very great; though, in all such cases, the soldiers suffered less than the women and children.”

Thus fell, under the power of the Americans, a city of great importance to the Mexicans, and a castle of far greater importance, justly denominated, from the strength of its walls, from the number of its guns, and from its isolated position, the "Gibraltar of America."

Great credit is accorded to General Scott for the scientific manner in which the siege was planned and conducted. The American loss was small, amounting to but sixty-five men, and but few officers; embracing, however, in the latter, Captain John R. Vinton, who had highly distinguished himself in the brilliant operations of Monterey. Such military achievements reflect the highest honor upon those who conduct them; but who, after all, in view of the carnage caused, and the misery consequent thereupon, can avoid adopting the language of the humane, and yet heroic Taylor, in his letter to a great American statesman, sympathizing with him on the loss of a beloved son—"I feel no exultation in our success."

The rejoicing consequent upon the capture of Vera Cruz, and the successful bombardment of the important adjoining fortress of San Juan d'Ulloa, were scarcely over, when came the news of another brilliant triumph of our arms, and of the victorious progress of our legions towards the "Halls of the Montezumas." On the 18th of April, the gallant commander-in-chief General Scott, encountered the enemy, thirteen thousand strong, under the personal command of Santa Anna, at Sierra Garda, or Cerro Gordo, as it is otherwise spelt, a mountain pass on the road to Jalapa, about sixty miles from Vera Cruz.

The road from Vera Cruz as it passes the Plan del Rio, which is a wide rocky bed of a once large stream, is commanded by a series of high cliffs rising one above the other, and extending several miles, all of which were well fortified. A front attack of these forts must have terminated, it was apparent, in an annihilation of the American army. Such a mode of attack, however, was expected by the enemy; but the skillful eye of General Scott perceived that by cutting a road to the right, the position of the enemy might be turned, on the left flank. This movement was made known to the enemy by a deserter from our camp,

Colonel Harney at Cerro Gordo.

Guerillas attacking a Train.

upon which a large force under General La Vega was sent to the forts on their left. In order however, to cover his flank movements, General Scott on the 17th of April ordered General Twiggs to attack the fort on the steep ascent in front, and a little to the left of the Cerro. Fortunately, this position was carried by Colonel Harney, detached by General Twiggs for that purpose. This position having thus been secured, with incredible labor one of the large guns was elevated to the top of the fort, in order to follow up the advantage which had been gained.

On the following day, General Twiggs was ordered forward from the position he had already captured, against the principal fort, which commanded the Cerro. At the same time, an attack was made on the fortifications on the enemy's left by the divisions of Gens. Shields and Worth, which moved in separate columns, while General Pillow was ordered to advance against the strong forts and difficult ascents on the right. Aware of these intended movements of General Scott, large bodies of the enemy had been thrown into the various positions to be attacked. The most important and serious enterprise was that of General Twiggs, who advanced against the main fort commanding the Cerro. The undertaking was difficult and hazardous. The ascent was steep and rough. The forts and batteries of the enemy poured forth a constant and galling fire. The steepness of the ascent furnished the only shelter. But the American soldiers sought no shelter, and, as usual, feared no danger. Led on by the gallant Harney, whose voice was heard amidst the thunder of the cannon, and whose arm was seen waving to his men to rush on to the charge, they paused not, but leaping from one rocky barrier to another, they at length reached the fort, from which the enemy was soon compelled to retire. It was here the enemy received their heaviest loss, and their General Vasquez was killed.

Shortly after the force under General Worth with incredible effort passed the steep and craggy heights on the enemy's left, and summoned a strong fort in the rear of the Cerro, to surrender. This fort was manned by a large force under General Pinson, a mulatto officer of consider-

able ability and courage, who, seeing the Cerro carried, thought proper to surrender, which he did with all his force. General Shields was less fortunate. In the battery which he attacked, and which was commanded by General La Vega, a heavy fire was opened upon him, under which the fort was indeed carried, but with considerable loss. The gallant general himself here received a grape-shot through his lungs, which at the time and for some time after was thought would prove mortal. On the enemy's right, General Pillow commenced an attack upon the strong forts near the river, but was at length obliged to withdraw his men, to save them from a heavy fire from a masked battery. As he was preparing, however, for another attack, the enemy concluded to surrender. The victory was complete. Three thousand of the enemy were taken prisoners, with the usual proportion of field and company officers, besides five generals, several of them of great distinction. These were Pinson, Jarrero, La Vega, Noriega and Obando. The force of General Scott was about eight thousand, General Quitman's brigade not having arrived in time to take part in the engagement. General Ampudia was second in command of the Mexicans, and superintended the operations of the enemy. When the Cerro was carried, he was seen retreating on a fine white charger, his hat falling off, as he galloped away. Our army captured forty-three pieces of beautiful brass cannon, of large calibre, and mostly manufactured at the large foundry of Seville. A large quantity of fixed ammunition was also taken. The private baggage, and money chest of Santa Anna containing some twenty thousand dollars, was also captured. Santa Anna with Gens. Canalizo and Almonte and some ninethousand men escaped toward Jalapa, but so hotly was the former pursued that he was obliged, it is reported, to mount a mule attached to his carriage, the harness of which was cut in order to effect his escape. The carriage itself was captured, and in, or near it, was found his cork leg. Even his dinner was left uneaten, which formed an acceptable repast for several American officers after the heat and fury of the battle was past. Besides General Shields, General Pillow was wounded ;

as were also Major Sumner, of the Rifles, and Captain Mason, with Lieutenants Maury, Gibbs, Davis, Ewell, and McLane. The loss of the Americans, in killed and wounded, was four hundred and thirty-four, of whom sixty-three were killed; that of the enemy from one thousand to twelve hundred.

The charge on Cerro Gordo was one of those cool, yet determined ones, so characteristic of the American soldier. From the time that our troops left the hill, nearest that prominent height, the fire was incessant, yet they pressed on with their wonted bravery, determined to conquer or die.

As for the Mexican general-in-chief, loud complaints were uttered by his troops against him for his pusillanimity and flight. But a few days before, in an official communication addressed to the Secretary of the Constituent Congress, he had made proclamation of his patriotism and willingness to yield up life, if that were necessary for his country's good. "As to myself," said he, "I am determined to breast the dangers of the campaign, confident that my conduct will gain the approbation of my fellow-citizens. If I am crowned by victory, and succeed in driving the enemy from our soil, I shall retire to private life, satisfied that I shall have rendered my country some service; or if the lead or steel should cut the thread of my life, I shall die contented, as I shall leave to my country an honorable memory, and to my children a name at which they need never blush." But he hastily and ingloriously flies, entering comparatively unprotected and unattended a chapparal, through which it is supposed he passed to Orizaba, a small town at the foot of a mountain of that name, leaving the road open to Mexico for the American troops by way of Jalapa and Perote.

The Americans having thus carried the various positions of the enemy, the division under General Twiggs started in pursuit of the fugitive Mexican army, which it followed to within three miles of Jalapa, where they encamped for the night, and entered and took possession of the city early on the following morning.

The city occupies a high hill—highest in the centre—so that the streets incline so much that no wheeled vehicle

can pass along any of them, except Main street. The city is surrounded by a wall, and has a strongly-built church near the western gate. The streets are paved. The houses, as in other Mexican towns, are of stone, with flat roofs and iron-barred windows. Jalapa yielded to General Twiggs without opposition, and subsequently became a depôt for part of the American forces.

On receiving intelligence of the surrender of Jalapa, the Mexican troops, which were stationed in the castle of Perote were withdrawn, and marched with the greatest precipitancy for the interior.

Perote is distant from Jalapa about fifty miles, being nearly midway between the capital and Vera Cruz. The population is estimated at nearly ten thousand. It is a walled city; the houses are generally of one story, built of stone, and covered with terraces; the principal street is remarkably fine; the others are wide and paved. The castle of Perote, together with the city, were taken possession of by Gen. Worth, on the 22d April, without opposition: both being surrendered by Col. Velasquez, who was left behind for the purpose of negotiating with the advancing American general.

The castle or fortress of Perote is considered one of the strongest in Mexico, and its surrender to the Americans without opposition was a national loss. Two thousand troops with their officers could be well accommodated within the walls, where were found ample store-houses, hospitals, and magazines, with an excellent supply of water. The munitions of war, which fell into the hands of the Americans, consisted of more than fifty guns and mortars, of various calibre, most of them in good condition; eleven thousand and sixty-five cannon-balls; fourteen thousand three hundred bombs and hand grenades; and five hundred muskets. Within the castle were found Generals Landero and Morales, who had been there confined since the surrender of Vera Cruz. These, with several American prisoners, were set at liberty.

Possession having thus been taken of Perote, an advance was not long after made upon Puebla, the next most considerable town upon the route to the capital. This city is

walled and fortified. It is built of stone, and the streets are well paved. It is situated at the extremity of a large plain, on the Vera Cruz side, and has a population variously estimated at from fifty to eighty thousand. The public place would be admired in almost any part of the world: it forms a perfect square; facing it, stands the cathedral; on three other sides are magnificent palaces. There are many other edifices of striking beauty. Few churches are more magnificently ornamented than the cathedral. All the chandeliers and lamps—and they are not few—are of massive gold and silver; the dome is of the marble of the country, and of great beauty and fine workmanship; the chapels—ten in number—are richly decorated, with an iron grate-door to each, of great height, and of the finest finish. The church was finished in 1808, at an expense, it is said, of \$600,000. The Almeida, or public walk, is well kept: it is composed of three alleys, of five or six hundred feet each, which are severally lined with trees; and the whole is surrounded by a wall, at the foot of which runs a fine stream of water. Few cities in Europe present a finer appearance. But no great encomium can justly be passed upon the inhabitants: they are far less elevated and refined than were the European Spaniards, who were some years since expelled.

Such is a brief view of Puebla, which the division of the American army, four thousand strong, under General Worth entered and occupied on the 15th of May. A spirited opposition was anticipated, as the enemy, it was understood, were in considerable numbers garrisoning the city; but only a feeble resistance was made. At Amazogue, a distance of some ten or twelve miles from the city, a body of lancers, headed by Santa Anna, made their appearance, and a skirmish ensued. No loss, however, was sustained on the American side; and but few of the Mexicans were killed. The latter soon retreated, and thus presented an easy access to the city. On entering, General Worth took possession of such prisoners and such public and military stores as the place contained. Here also he established his head-quarters, while Santa Anna proceeded towards the capital.

From this time, for several weeks no important movements took place. The army rested and recruited. On the 8th of June, a party, consisting in part of soldiers and in part of citizens, to the number of one hundred and fifty, under command of Captain Bainbridge, third artillery, left Puebla for Vera Cruz. They reached Jalapa without opposition. But the road from that point to Vera Cruz, it was understood, was infested by strong guerilla parties. These were now multiplying in all parts contiguous to the theatre of war. They consisted either of detached bodies of soldiers, or of banded citizens, which, occupying the mountains, or the chapparals, would easily rush out, and suddenly attack reconnoitering or recruiting parties and trains of waggons, transporting provisions or munitions of war. And it may here be stated, that the history of these guerillas, during the present war with Mexico, in all its details, could those details be written, would shock the most hardened minds. Such wanton cruelty, such savage barbarity, is scarcely to be believed—and yet, from the representations of some few, who had the good fortune to escape their vengeance, we learn that language almost fails to describe the cruelties which are not unfrequently practised by them.

The above party on approaching Cerro Gordo were apprised that a considerable Mexican force was concealed in that pass, and that signal danger attended their march. Notwithstanding this, they continued their journey through the pass without meeting with the anticipated opposition, and arrived at the National bridge the same evening. While preparing to encamp, they learned that a party of the enemy was barricading the bridge to prevent their progress.

In the morning, however, the bridge was cleared without opposition, and the main body passed over in safety. A different fortune awaited their waggon-train. For the purpose of bringing this over, an officer and soldier were sent across the bridge. But they were fired upon by a guerilla party of twenty-five, as were also the attendants of the waggon. The waggon-master and four attendants were killed, and the waggon captured. Upon this, Captain

Bainbridge prepared for action; but the Mexicans re-reat- ing, the captain pursued his way to the encampment of Colonel McIntosh. This officer had been previously attacked by the enemy, and was awaiting reinforcements. During the night, the enemy continued to fire on the camp, and occasionally manœuvred as if about to charge. Great credit was given to the dragoons under Captain Duperus, to whose courage and protection the whole party was doubtless indebted for their safety.

The day following, Captain Bainbridge and his party continued their march towards Vera Cruz, which they reached in safety. Meanwhile, Captain Duperus having in charge a long return train, halted at Santa Fe, where he was attacked by a strong guerilla party, greatly superior in force, but which he repulsed with considerable loss to the enemy. He also arrived at Vera Cruz with his command, having lost only a few waggons, and but three killed and wounded.

Fortunately, on the day that Captain Bainbridge left the encampment of McIntosh, General Cadwallader arrived with eight hundred men and two howitzers, and pushed on to the National bridge. Here he was attacked by a large Mexican force. The struggle was brief, but obstinate and sanguinary. It resulted in a repulse of the enemy, with the signal loss of one hundred killed, besides many wounded. The loss of the Americans did not exceed fifteen killed, and from thirty to forty wounded.

Previously to this battle, the loss of Colonel McIntosh from the guerillas had been considerable. In an engagement, the colonel and his party had fallen back with the expectation of being pursued, and of thus saving their waggon-train: but the enemy seized upon twenty-eight waggons, and nearly two hundred pack-mules; the estimated value of which was nearly four thousand dollars.

The affairs of Mexico, it was apparent, had for some months been wearing a more and more gloomy aspect. Every battle had resulted in the defeat of her armies. Her councils were distracted. Her generals were captured, or, being defeated one after another, were fast losing the confidence of the nation. The proud and boastful

language of Santa Anna previous to the eventful battle of Cerro Gordo, and his hasty and inglorious flight ere it was finished, had lessened the confidence of both army and people in him. Besides, there was an increasing party in the nation, which desired peace, and which were now not slow to advocate the election of Herrera to the presidency, in order the more readily to secure that object. In this party were included the clergy and a respectable minority in Congress: but the measure was not agreeable to the army and a majority of the nation.

The state of affairs and his several reverses served to perplex and discourage Santa Anna himself: and perhaps induced him about this time to tender his resignation to Congress of the presidency of Mexico and the chief command of the army. There were, however, those who considered this offer on the part of this wily chieftain only a *manœuvre* by which to regain his former popularity, and to entrench himself more firmly in power. Be his motives what they may have been, he secured the objects of his ambition. The Congress declined acceding to his offers. His former services were lauded, and confidence reposed in his patriotism and ability; and to Mexico and the cause of her arms the movement was doubtless auspicious. A temporary impulse was given to her operations. Greater confidence prevailed, and the enlistment of troops was more easy and in greater numbers.

For some time following the brilliant exploits at Cerro Gordo, General Scott necessarily remained inactive at Puebla, waiting for reinforcements. Meanwhile, the Mexicans, notwithstanding their many reverses, industriously employed themselves in collecting another army, and in fortifying the several approaches to the capital.

Having, at length, received a small reinforcement, General Scott broke up his camp, and marched for the metropolis. A spirited opposition was anticipated at the Rio Frio pass—a deep gorge which takes its name from a small river adjacent. This pass the Mexicans had, for some time, been engaged in fortifying; but on reaching the dreaded defile, no opposition was made. The loss of this opportunity of resisting the progress of the Americans was

a sad mistake on the part of the Mexicans, as the gorge was capable of being strongly defended, and, perhaps, of proving an insuperable barrier to the American army, with a comparatively small number of troops.

On descending into the basin of the capital, seventy-five miles from Puebla, the several divisions of the American army, which had left Puebla on the 7th, 8th, 9th, and 10th, of August, became closely approximated about the head of Lake Chalco. On the 12th and 13th, reconnoissances were made upon the Pennon, an isolated mound, eight miles from Mexico, of great height, and strongly fortified, and flooded round the base by trenches filled with water. This fortification, being close to the National road, commanded the principal eastern approach to the city. The strength of this fortification, munitioned and garrisoned in the most careful manner, induced General Scott to abandon the project of an attack upon the Pennon, and to take advantage of an old, concealed road, by which the whole army passed in safety, south of Lake Chalco, first to Ayotla and thence to San Augustine, where they arrived on the 17th. This place is about ten miles south of Mexico on the Acapulco road. This masterly movement was entirely unanticipated by the Mexicans. The Pennon fortification stood, it was supposed, as an insuperable obstacle to their approach, and, although that fortification might doubtless have been carried, it must have been with the loss of many a gallant soldier. By a happy manœuvre of the commander-in-chief, this loss was spared, and his army reserved for the intensely interesting scenes which lay before them.

On the 18th, Worth's division and Harney's cavalry moved on the road in the direction of San Antonio. This village was found strongly defended with field-works, heavy guns, and a numerous garrison. During a reconnoitre of the place a heavy discharge from the Mexican battery killed Captain Thornton, of the second dragoons, a gallant officer, who was covering the operation with his company. This caused the dragoons to be withdrawn, but various movements took place during the remainder of the day, the object of which was to secure, if possible, a favorable position for attacking and dislodging the Mexicans, in order

to open the way towards the capital. A cold and heavy rain, however, now set in, which induced the general-in-chief to suspend further offensive operations for the day.

The morning of the 20th found the American army— notwithstanding that the troops had lain in the field all night, destitute of tents or blankets, and exposed to a drizzling rain, which ended towards morning in unbroken torrents—ready for new duties, and for the achievement of victories (all in view of the capital) which have seldom, if ever, been surpassed.

On the night of the 19th, Generals Shields, Smith, and Cadwallader, with their brigades, and the fifteenth regiment, under Colonel Morgan, found themselves in and about the important position, the village or hamlet of Contreras, half a mile nearer to the city than the enemy's entrenched camp on the same road towards the factory of Magdalena.

That camp had been unexpectedly a formidable point of attack the afternoon before, and it was now to be taken without the aid of cavalry or artillery, or the advanced corps to be thrown back upon the road from San Augustine to the city, and thence a passage be forced through San Antonio. To meet contingencies, General Worth was ordered to leave, early in the morning of the 20th, one of his brigades, for the purpose of masking San Antonio, and to march with the other, six miles upon Contreras, via San Augustine. Other movements and orders were now made, having for their object a general, united, and effective attack upon the strong entrenchments of the enemy at Contreras. Without entering into the particulars of this engagement, it is sufficient to say, using the language of the general-in-chief, in his official report: "I doubt whether a more brilliant or decisive victory, taking into view ground, artificial defences, batteries, and the extreme disparity of numbers, without cavalry or artillery, is to be found on record. Including all our corps directed against the entrenched camp, with Shield's brigade at the hamlet, we positively did not number over four thousand five hundred rank and file; and we knew by sight, and since more certainly, by many captured documents and letters, that the enemy had actually

Battle of Contreras.

Battle of Churubusco
62*

engaged*on the spot seven thousand men, with at least one thousand two hundred men hovering within sight, and striking distance, both on the 19th and 20th. All, not killed or captured, now fled with precipitation.

"Thus was the great victory of Contreras achieved; one road to the capital opened; 700 of the enemy killed; 813 prisoners, including 88 officers, 4 generals, besides many colors and standards, 22 pieces of brass ordnance, half of large calibre, thousands of small arms and accoutrements; an immense quantity of shot, shells, powder and cartridges; 700 pack-mules, many horses, &c., &c., fell into our hands.

"It is highly gratifying to find that, by skilful arrangement and rapidity of execution, our loss, in killed and wounded, did not exceed, on the spot, sixty; among the former the brave Captain Charles Hanson, of the sixth infantry, not more distinguished for gallantry, than for modesty, morals, and piety. Lieutenant J. P. Johnstone, first artillery, serving with Magruder's battery, a young officer of high promise, was killed the evening before.

"One of the most pleasing incidents of the victory is the recapture, by Captain Drum, fourth artillery, under Major Gardner, of the two brass six-pounders taken from another company of the same regiment, though without loss of honor, at the glorious battle of Buena Vista, about which guns the whole regiment had mourned for so many long months. Coming up, a little later, I had the happiness to join in the protracted cheers of the gallant fourth on the joyous event; and indeed the whole army sympathizes in its just pride and exultation."

The victory of Contreras was almost immediately followed by a *second* brilliant event, viz: the forcing of San Antonio. This was accomplished chiefly by General Worth's division. Great importance was attached to the capture of this position, as thereby a shorter and better road would be opened to the capital. It was a bold achievement, but doubtless the more easily accomplished from the total defeat of the enemy's forces at Contreras.

This desirable object accomplished, the division, which had been temporarily separated, was soon united in hot

pursuit, and was joined by Major General Pillow, who, marching from Coyracon, and discovering that San Antonio had been carried, immediately turned to the left, and though much impeded by ditches and swamps, hastened to the attack of Churubusco.

The hamlet, or scattered houses bearing this name, presented, besides the fortified convent, a strong field-work, (*tête de pont*) with regular bastions and curtains at the head of a bridge, over which the road passes from San Antonia to the capital.

The whole remaining forces of Mexico—some twenty-seven thousand men—cavalry, artillery, and infantry, collected from every quarter—were now in on the flanks, or within supporting distance of these works, and seemed resolved to make a last and desperate stand; for, if beaten here, the feebler defences at the gates of the city—four miles off—could not, as was well known to both parties, delay the victors an hour. The capital of an ancient empire, now of a great republic, or an early peace, the assailants were resolved to win. Not an American—and we were less than a third of the enemy's number—had a doubt as to the result.

The fortified church or convent, hotly pressed by Twiggs, had already held out about an hour, when Worth and Pillow—the latter having with him only Cadwallader's brigade—began to manœuvre closely to *tête de pont* with the convent at half gun-shot to their left. Garland's brigade (Worth's division), to which had been added the light battalion under Lieutenant Colonel Smith, continued to advance in front, under the fire of a long line of infantry, off on the left of the bridge; and Clarke, of the same division, directed his men along the road, or close by its side. Two of Pillow's and Cadwallader's regiments, the eleventh and fourteenth, participated in this direct movement; the other (the *voltigeurs*) was left in reserve. Most of these crops—particularly Clarke's brigade—advancing perpendicularly, were made to suffer much by the fire of the *tête de pont*, and they would have suffered greatly more, by flank attacks from the convent, but for the pressure of Twiggs on the other side of that work.

This well-combined and daring movement at length reached the principal point of attack, and the formidable *tête de pont* was at once assaulted, and carried by the bayonet. Its deep, wide ditch, was first gallantly crossed by the eighth and fifth infantry, commanded respectively by Major Waite and Lieutenant Colonel Scott—followed closely by the sixth infantry (same brigade), which had been so much exposed on the road—the eleventh regiment, under Lieutenant, Colonel Graham, and the fourteenth, commanded by Colonel Gronsedale, both of Cadwallader's brigade, Pillow's division. About the same time, the enemy in front of Garland, after a hot conflict of an hour and a half gave, way in a retreat towards the capital.

The immediate results of this *third* signal triumph of the day were: three field-pieces, 192 prisoners, much ammunition, and the colors taken in the *tête de pont*.

The capture of the *tête de pont* was soon followed by the surrender of the convent, and doubtless contributed thereto. The two works were only some four hundred and fifty yards apart, and no sooner had the former been carried, than a captured four-pounder was turned against the convent. Lieutenant Colonel Duncan, from the San Antonio road, soon brought two guns to bear upon the principal work and upon the tower of church. Finally, twenty minutes after the *tête de pont* had been carried by Worth and Pillow, at the end of a desperate conflict of two hours and a half, the church or convent—the citadel of the strong line of defence along the rivulet of Churubusco—yielded to Twiggs' division, and threw out on every side signals of surrender. The more sure exhibition of surrender—the white flag—not long after followed.

The capture of the enemy's *citadel*, was the *fourth* signal victory achieved that day. The immediate results of this victory were: the capture of seven field-pieces, some ammunition, one color, three generals, one thousand two hundred and sixty-one prisoners, including the officers. The loss of officers on the American side was Captains Capron and Burke, and Lieutenant Hoffman, all of the first artillery, and Captain Anderson and Lieutenant Easley, both of the second infantry.

To the foregoing should be added a *fifth victory*, under General Shields, in the rear of Churubusco, during an engagement about the same time with the one above described. "This battle," as described by the general-in-chief, was "long, hot, and varied; but success ultimately crowned the zeal and gallantry of our troops, ably directed by their distinguished commander, Brigadier General Shields."

During this engagement, General Pierce, from a hurt received the evening before—under pain and exhaustion—fainted on the field. Colonel Morgan being severely wounded, the command of the fifth infantry devolved on Lieutenant Colonel Howard. Colonel Burnett receiving a like wound, the command of the New York volunteers fell on Lieutenant Colonel Baxter; and on the fall of the lamented Colonel P. M. Butler, the command of the South Carolina volunteers devolved first on Lieutenant Colonel Dickinson, who being severely wounded, the regiment ultimately fell under the orders of Major Gladden.

Lieutenants David Adams and W. B. Williams, of the same corps; Captain Augustus Quarles, and Lieutenant J. B. Goodman, of the fifteenth, and Lieutenant E. Chandler, New York volunteers, all gallant officers, nobly fell in the same action,

Shields took three hundred and eighty prisoners, including officers; and it cannot be doubted that the rage of the conflict between him and the enemy, just in the rear of the *tête de pont* and the convent, had some influence on the surrender of those formidable defences.

As soon as the *tête de pont* was carried, the greater part of Worth's and Pillow's forces passed that bridge in rapid pursuit of the flying enemy. These distinguished generals, coming up with Brigadier General Shields, now also victorious, the three continued to press upon the fugitives to within a mile and a half of the capital. Here Colonel Harney, with a small part of his brigade of cavalry, rapidly passed to the front, and gallantly charged the enemy up to the nearest gate.

Such were the results of this important day. Thirty-two thousand men had, in several battles, been defeated

and routed. Three thousand prisoners, including eight generals, had been made, and two hundred and five other officers. Four thousand of all ranks had been killed or wounded, besides entire corps dispersed and dissolved. Thirty-seven field-pieces had been captured, besides a large number of small arms, and large quantities of ammunition of every kind.

The loss on the American side was one thousand and fifty-three: killed, one hundred and thirty nine, including sixteen officers; wounded, eight hundred and seventy-one, with sixty officers. The greatest number of the dead and disabled were of the highest worth and promise.

The victories thus achieved presented an easy access to the capital, which, doubtless, might have been occupied the same evening; but Mr. Trist, a commissioner from the United States, sent for the purpose, if possible, of effecting a treaty, being now with the army, and the hope being indulged that the time had arrived when an adjustment of difficulties might be made, without a forcible entry into the Mexican capital, the general-in-chief decided to halt his victorious army at the very gates of the city, and await the action of its councils. On the morning of the 21st proposals for an armistice were made. On the 22d commissioners were appointed by the commanders of the armies; the armistice was signed on the 23d, and ratifications exchanged on the 24th; immediately following which, meetings were held by Mr. Trist and Mexican commissioners appointed to treat of peace. These negotiations were actively continued to the 2d of September, when the American commissioner presented his ultimatum in respect to boundaries, and the negotiators adjourned to meet again on the 6th.

By the terms of the armistice, it was agreed that supplies from the city or country for the American army should not be obstructed by the Mexican authorities, civil or military, nor during its continuance should any measures be adopted to enlarge or strengthen any existing work or fortification within thirty leagues of the city of Mexico. Infractions of these and other articles of the armistice were made by the Mexicans, particularly in

regard to the military defences of the city. These infractions being brought to the notice of Santa Anna by Gen. Scott, the former replied in terms of insolence and denial. In short, the commissioners having failed to agree, and the terms of armistice having been repeatedly violated by the Mexicans—the American general was induced to proceed at once, on the termination of the armistice, to make preparations for an advance upon the capital.

On the 7th of September, a large body of the enemy was discovered hovering about the Molinos del Rey, within a little more than a mile of Tacubaya, the headquarters of General Scott. Molinos del Rey, it was understood, contained a cannon-foundry, with a large deposit of powder. It was also understood that several church bells had been sent thither to be cast into guns. Considering the importance of this place to the enemy, General Scott determined to attempt the destruction of the foundry and seizure of the founder. A further inducement to this movement was found in the difficulty of opening a communication between the foundry and the capital without first taking the formidable castle on the heights of Chapultepec, which overlooked both, and stood between.

The first object being the capture of Molinos del Rey, this duty was assigned to General Worth, who was directed by the general-in-chief to limit his operations to that particular object, leaving an attack upon the castle of Chapultepec to a future hour.

Having made such a disposition of his forces as the nature of the case seemed to require, General Worth put his several columns in motion at three o'clock on the morning of the 8th. The early dawn was the moment appointed for the attack, which was announced to the troops by the opening of Huger's guns on Molinos del Rey, upon which they continued to play actively until this point of the enemy's lines became sensibly shaken, when an assaulting party of five hundred picked men, commanded by Major Wright, dashed gallantly forward to the assault. Unshaken by the galling fire of the musketry and canister that was showered upon them, on they rushed, driving infantry and artillerymen at the point of the bayonet.

The enemy's field battery was taken, and his guns trailed upon his own retreating masses; before, however, they could be discharged, perceiving that he had been dispossessed of this strong position by comparatively a handful of men, he made a desperate effort to regain it. Accordingly his retiring forces rallied, and formed with this object. Aided by the infantry, which covered the house-tops, the enemy's whole line opened upon the assaulting party a terrific fire of musketry, which struck down eleven of the fourteen officers that composed the command; and non-commissioned officers, and men in proportion, including among the officers, Major Wright, the commander; Captain Mason and Lieutenant Foster, engineers, all severely wounded. This severe shock staggered for a moment that gallant band: aid, however, was promptly sent to their support. Meanwhile, Garland's brigade, sustained by Captain Drum's artillery, assaulted the enemy's left; and, after an obstinate and severe contest, drove him from his apparently impregnable position immediately under the guns of the castle of Chapultepec. Various movements now took place. A most spirited and deadly work was waged in various quarters. A large proportion of officers fell; among whom were Brevet Colonel McIntosh, Lieutenant Colonel Scott, and Major Waite, the second killed, and the first and last desperately wounded. But at length American valor and perseverance triumphed, and the victorious general and his remaining troops returned to their quarters at Tacubaya with three of the enemy's four guns, the fourth having been spiked, as also with a large quantity of small arms, with gun and musket ammunition, and exceeding eight hundred prisoners, including fifty-two commissioned officers. The enemy's force exceeded fourteen thousand men, commanded by General Santa Anna in person. His total loss, killed (including Generals Valdaroz and Leon), wounded and prisoners, amounted to three thousand, exclusive of some two thousand who deserted after the rout. The American force reached only three thousand one hundred men of all arms. The contest continued two hours, and its severity was painfully attested by our heavy loss of officers, non-com-

misioned officers, and privates, including in the first class some of the brightest ornaments of the service. Nine officers were killed and forty-nine wounded; seven hundred and twenty-nine rank and file were killed and wounded.

The victory of the 8th at the Molinos del Rey was immediately followed by reconnoissances in reference to an attack upon the capital itself—long the object of our ambitious army. The city of Mexico stands on a slight swell of ground, near the centre of an irregular basin, and is girdled with a ditch in its greater extent—a navigable canal of great breadth and depth—very difficult to bridge in the presence of an enemy, and serving at once for drainage, custom-house purposes, and military defence; leaving eight entrances or gates over arches—each of which was defended by a system of strong works, that seemed to require nothing but some men and guns to render them impregnable.

Outside, and within the cross-fires of those gates, on the south, other obstacles not less formidable existed. All the approaches to the city are over elevated causeways, cut in many places in order to oppose the American army, and flanked on both sides with ditches of unusual dimensions. The numerous cross-roads were flanked in like manner, having bridges at the intersections which had been broken up. The meadows thus checkered were in many spots under water, and marshy, owing to the wet season.

Such were some of the obstacles to an approach to the city. Besides these, existed another most formidable, but which it was essential to remove—the fortress of Chapultepec, a natural and isolated mound of great elevation, strongly fortified at its base, on its acclivities and heights. Besides a numerous garrison, here was the millitary college of the republic, with a large number of sub-lieutenants and other students. The works were within direct gun-shot of the village of Tacubaya, and, until carried, the Americans could not approach the city on the west (a southern approach was deemed impracticable) without making a circuit too wide and too hazardous.

To a successful attack upon Chapultepec, and an

At the Storming of Chepultapec.

WILLIAMS & SON.

approach to the city by that route, it was deemed essential that a feint should be made against the southern part of the city. This stratagem was admirably executed throughout the 12th, and down to the afternoon of the 13th, when it was too late for the enemy to recover from the effects of his delusion.

On the morning of the 12th, the bombardment and cannonade of Chapultepec was commenced, under command of Captain Huger. Before night-fall an obvious impression had been made upon the castle and outworks. During this day's attack a large body of the enemy had remained outside towards the city, to avoid the fire of the Americans, and to be on hand at its cessation, in order to reinforce the garrison against an assault. On the following morning, on re-opening the cannonade, the same force was discovered outside.

On the 13th, at eight o'clock in the morning, a signal was given for an attack by the army upon the castle, which had so long been the object of cannonade and bombardment. A strong redoubt, however, was first to be carried. The advance of the men, led by their brave officers, was necessarily slow, but unwavering, over rocks, chasms, and mines, and under the hottest fire of cannon and musketry. The redoubt now yielded to resistless valor, and the shouts that followed announced to the castle the fate that impended. The enemy was steadily driven from shelter to shelter. The retreat allowed not time to fire a single mine without the certainty of blowing up friend and foe. Those at the distance, who attempted to apply matches to their long trains, were shot down by the Americans. There was death to those below, as well as to those above ground. At length, the ditch and wall of the main work were reached; the ladders arrived; and several efforts were made, by both officers and men, to scale the walls. But many of the gallant spirits, who first attempted it, fell, killed or wounded. Colonel Andrews, whose regiment so distinguished itself and its commander by this brilliant charge, as also Lieutenant Colonel Johnstone and Major Caldwell, whose activity enabled them to lead this assault, greatly distinguished themselves by their gallantry and daring. Lieutenant Colonel Johnstone received three

wounds; but they were all slight, and did not at all arrest his daring and onward movements. Captain Barnard, with distinguished gallantry, having seized the colors of his regiment, upon the fall of the color-bearer, scaled the walls with them unfurled, and had the honor of planting the first American standard in the work. Captain Biddle, always prompt, vigilant, and daring, though so much enfeebled by disease as to be scarcely able to walk, left his sick bed on this great occasion, and was among the foremost to enter the works.

The gallant Colonel Ransom, of the ninth infantry, fell dead from a shot in the forehead, while at the head of his command, waving his sword, and leading his splendid regiment up the heights to the summit of Chapultepec. "I had myself been a witness to his heroic conduct," says General Pillow, in his official report, "until a moment before, when I was cut down by his side. My heart bleeds with anguish at the loss of so gallant an officer. The command of his regiment devolved upon Major Seymour, who faltered not, but with his command scaled the parapet, entered the citadel sword in hand, and himself struck the Mexican flag from the walls."

Not less distinguished, and no less glorious, was the conduct of the fifteenth regiment of infantry, now under command of Lieutenant Colonel Howard. This regiment, which had greatly distinguished itself in the action near Churubusco, on the 20th ultimo, where the brave Colonel Morgan was wounded, now covered itself with new honors and fresh laurels, under command of its present veteran leader, assisted by his gallant Major, Woods. Captain Chase, of this regiment, at a most critical moment in the charge, when the voltigeur regiment had advanced partly up the hill, and the enemy in strong force had occupied the redoubt, half way up the declivity, and held us in check, under orders from my adjutant-general, Captain Hooker, with a firmness few but himself possessed, dashed rapidly forward to the right flank of the work, calling upon his company to follow. Lieutenant Beach quickly supported him with his company, and the enemy fled from the redoubt, pursued by the troops of my command. Great

credit is due to the officers and men for their rapid movements at this time, for the whole hill-side was mined, and had the enemy been allowed to fire their trains, great destruction must have inevitably ensued.

Lieutenant Selden, of the eighth infantry, of Captain McKenzie's command, one of the first to mount the scaling ladder, fell from its summit severely wounded. Lieutenant Rogers, fourth infantry, and Lieutenant Smith, fifth infantry, of the same party, were both distinguished by their heroic courage and daring, and were both killed while nobly leading on their men. Captain McKenzie, selected to lead the storming corps from the first division, acted well his part after reaching the heights, and sustained the character of the veteran division of which his command was a part.

The fate of Chapultepec was thus sealed, and access to the city opened to the American army. There are two routes from Chapultepec; one on the right, entering the gate Belen, with the road from the south, via Piedad; the other obliqueing to the left, to intersect the great western or San Cosme road in a suburb outside of the gate of San Cosme.

Worth and Quitman were prompt in pursuing the retreating enemy, the former by the San Cosme aqueduct, the latter along that of Belen. The latter of these routes being considered far more difficult and dangerous, it was the design of the general-in-chief that Quitman should only manœuvre and threaten the Belen or south-western gate, while Worth should be better supported and the main attack be made at the San Cosme gate.

But the valor of Quitman and his troops would not admit of delay. Gallant himself, and ably supported by Brigadier Generals Shields and Smith, (Shields badly wounded before Chapultepec, but refusing to return,) they pressed forward under flank and direct fires, carried an intermediate battery of ten guns, and then the gate, before two o'clock in the afternoon, but not without proportionate loss, increased by the steady maintenance of that position. Quitman now entered the city, when, adding several new defences to the position he had won, and sheltering his

corps as well as he was able, he awaited the return of daylight under the guns of the citadel not to be subdued.

During the movements of Quitman, General Worth was industriously employed in fighting his way to the San Cosme, or Custom-house gate. By eight o'clock in the evening, he had carried two batteries in the suburb; and here, by the direction of the general-in-chief, he posted guards and sentinels, and placed his troops under shelter for the night. There was but one obstacle, the San Cosme gate, between him and the great square, in front of the cathedral and the palace, the heart of the city, and that barrier, it was known, could not, by daylight, stand our large guns thirty minutes.

Such was the position of things on the night of the 13th. The weary army sunk to rest, if rest could be found, in expectation of stirring scenes on the coming morning, and with the hope of obtaining an object long sought for—possession of the city which embosomed the celebrated “Halls of the Montezumas.”

But at four o'clock, on the 14th, a deputation from the city council waited upon the general-in-chief with the annunciation that the federal government and the army of Mexico, having abandoned the city, they had come to demand terms of capitulation in favor of the church, the citizens, and the municipal authorities. These demands were, however, promptly met and denied. The city, it was claimed by Gen. Scott, was, in effect, in the power of the Americans, and they would come under no terms not self-imposed.

Thus terminated the interview; at the close of which, General Scott gave orders to Generals Worth and Quitman to advance slowly and cautiously, to guard against treachery, towards the heart of the city, and to occupy its strong and more commanding points. General Quitman proceeded to the great plaza or square, where he planted guards, and hoisted the colors of the United States on the national palace—containing the halls of the congress and executive departments of federal Mexico. “In this grateful service,” says General Scott, “Quitman might have been anticipated by Worth, but for my express orders, halting the latter at

City of Mexico, from the Convent of San Cosme.—The American Army entering the City.

the head of the Alamedas or Park, within three squares of that goal of general ambition." "The capital," he adds, "was not taken by one or two corps, but by the talent, the science, the gallantry, the patriotism of the entire army. In the glorious contest, all had contributed—early and powerfully—the killed, the wounded, and the fit for duty—at Vera Cruz, Cerro Gordo, Contreras, San Antonio, Churubusco, (three battles,) the Molinos del Rey, and Chapultepec—as much as those who had fought at the gates of Belen and San Cosme."

No sooner had the victorious army entered, and were in the act of occupying the city, when a fire was opened upon them from the flat roofs of the houses, from windows, and corners of streets, by some two thousand convicts, liberated the night before by the flying government, joined by, perhaps, as many Mexican soldiers, who had disbanded themselves and thrown off their uniforms. This unlawful war lasted more than twenty-four hours, during which several officers and many soldiers were killed, nor could it be prevented by the municipal authorities of the city.

Thus fell, under the power of the American arms, a city celebrated from the very discovery of the country for its wealth and magnificence—for its public squares and public places—its churches, its palaces, and its other beautiful and extensive structures—and containing a population variously estimated from one hundred and forty thousand to two hundred thousand inhabitants; and at this time defended, at vast expense, by every possible fortification, and by the combined wisdom and scientific skill of their most accomplished generals, aided by an army of thousands upon thousands.

Such a series of successful enterprises, accomplished by so few men, and at such a distance from home, in an enemy's country, and that enemy fighting for their altars and their firesides, is scarcely to be paralleled. Including the garrison of Jalapa, and two thousand four hundred and twenty-nine men brought up by General Pierce August 4th, the entire force which left Puebla August 7th—10th, and which constituted General Scott's entire force, amounted only to ten thousand seven hundred and thirty-eight, rank

and file. At Contreras, Churubusco, &c., August 20th, the number of men engaged was eight thousand four hundred and ninety-seven. At the Molinos del Rey, September 8th, three thousand two hundred and fifty-one. At the capture of the city itself, the effective force did not exceed six thousand. The grand total loss of the Americans during their several engagements after entering the basin of Mexico is estimated at two thousand seven hundred and three, including three hundred and eighty-three officers. Of the original force of the Mexicans, estimated at thirty-two thousand, more than seven thousand were killed or wounded; three thousand seven hundred and thirty were made prisoners, one-seventh officers, including thirteen generals, of whom three had been presidents of the republic. More than twenty colors and standards were taken; seventy-five pieces of ordnance, besides fifty-seven wall pieces, twenty thousand small arms, and an immense quantity of shot, shells, and powder.

With the conquest of Mexico, the power and influence of Santa Anna seemed to have ended. If his patriotism was not impugned, his wisdom and military tact were extensively questioned. He retired from the city a fugitive; his army was, in effect, disbanded; his officers and troops scattered in every direction. The supreme government had been filled by Santa Anna, on the 16th of September, the date of his resignation of the presidency, by the appointment of General Pena y Pena, as provisional president, who, on the 13th of October, issued his proclamation, assembling the congress of the nation at Querataro, one hundred and twenty-five miles north of Mexico. This summons was followed, on the 20th of October, by an address from Senor Rosa, Secretary of State, convoking, in the name of the president, the governors of the several states to meet him at Querataro on the 10th of November, to consult with the president and his cabinet on subjects of the highest importance.

Allusion has already been made to the dissatisfaction felt with regard to the manner with which Santa Anna had conducted the war. That dissatisfaction extended to General Pena y Pena, the provisional president of the repub

lic, who, through Rosa, now deprived Santa Anna of his command and required him to deliver it up to Don Manuel Rincon, and thence to wait, at some convenient place, the formation of a council of war, to sit in judgment upon him, for the loss of the capital of the republic. On the 16th of October, Santa Anna published a farewell address to the army, dated at his head-quarters at Huamantla, in which, after alluding to the order of the president to transfer his command, in conclusion he said: "I depart from you and the theatre of war, perhaps to sacrifice myself to the vengeance of my enemies, or to effect an inglorious peace, which I did not wish to grant, because it was repugnant to my conscience."

This was followed by a second address, purporting to be a manifesto against the government, and which was dated at Tebuscan, October 22d. In this, he uttered loud complaints against the government, and all who had combined to deprive him of his command, and of the honor he claimed as due to him. The charge of a want of patriotism he repelled with indignation, challenging his enemies to produce their proofs of its truth, if proofs they had, and conjuring Generals Scott and Taylor, and their armies, to declare, whether, as a Mexican general, he had not fulfilled all his duties to his country.

To a complete view of the operations of the army in Mexico, it is necessary to bring to the notice of the reader transactions in other quarters.

On retiring from Mexico, Santa Anna, gathering a small force, proceeded to the neighborhood of Puebla. This city had been placed in command of Childs, on the march of the American army towards Mexico, with a force of about four hundred men, while the hospitals at that place were filled with one thousand eight hundred sick. Finding it necessary for the comfort of the sick to remove them within the protection of San Jose, Colonel Childs was here at length besieged by a Mexican force for the space of twenty-eight days and nights from the 14th of September. During this time the enemy augmented in numbers daily. Supplies were cut off, and even an attempt was made to deprive the garrison and the sick of water. On the night of the 22d

as above stated, Santa Anna made his appearance, which was signalized by a general ringing of the bells, and a discharge of shell and round-shot from Soretto into the heart of the city. On the 25th of September, Santa Anna sent in a demand for the surrender of the place. On the 30th he had established his battery, bearing on San Jose, which opened with great spirit. This movement, however, had been anticipated, as were also various other movements during the siege. At length, however, assistance came to the relief of the besieged colonel and his worn-out but still spirited and determined troops. With a competent force, General Lane reached Puebla on the 13th of October, at one o'clock. He immediately entered the city, his troops moving up towards the main plaza, and driving the scattered forces of the enemy before him, and completely clearing the streets. Thus was a brave officer and his men relieved, after a long and serious siege of nearly thirty days and thirty nights. "Never," says Colonel Childs, in his official report, "did troops endure more fatigue, by watching night after night, for more than thirty successive nights, nor exhibit more patience, spirit, and gallantry. Not a post of danger could present itself, but the gallant fellows were ready to fill it—not a sentinel could be shot, but another was anxious and ready to take his place: officers and soldiers vied with each other to be honored martyrs in their country's cause."

Since the capture of Mexico, two other engagements have taken place between the American and Mexican force—the one at Huamantla on the 9th of October, and the other at Atlixco on the 19th.

In the action of the 9th, at Huamantla, General Lane's force consisted of Colonel Wynkoop's battalion, (from Perote,) Colonel Gorman's regiment of Indiana volunteers. Captain Heintzleman's battalion of six companies, Major Lally's regiment of four companies of mounted men, under command of Captain Samuel H. Walker, mounted riflemen, and five pieces of artillery, under command of Captain George Taylor, third artillery, assisted by Lieutenant Field, artillery.

The Mexican force was estimated at four thousand, a

large portion of which were lancers, under the immediate command of Santa Anna. Although fatigued by a long march, the American troops entered the action with great spirit and bravery. Among the distinguished officers taken prisoners, were Colonel La Vega and Major Iturbide, son of the former chief of the republic. To no one, among the gallant men who took part in the action, was the commanding general more indebted for his decided victory than to Captain Samuel H. Walker, of the mounted rifle men. The commanding general thus speaks of him:

"On arriving near the city, about one o'clock P. M., Captain Walker, commanding the advance guard, (of horsemen,) was ordered to move forward ahead of the column, (but within supporting distance,) to the entrance of the city, and if the enemy were in force, to wait the arrival of the infantry before entering. When within about three miles, parties of horsemen being seen making their way through the fields towards the city, Captain Walker commanded a gallop. Owing to the thick maguay bushes lining the sides of the road, it was impossible to distinguish his further movements. But a short time had elapsed when firing was heard from the city. The firing continuing, the column was pressed forward as rapidly as possible. At this time a body of about two thousand lancers was seen hurrying over the hills towards the city. I directed Colonel Gorman with his regiment to advance towards and enter the west side of the city, while Colonel Wynkoop's battalion, with the artillery, moved towards the east side, Captain Heintzleman's moving on his right, and Major Lally's constituting the reserve.

"Upon arriving at the entrance to the city, Captain Walker, discovering the main body of the enemy in the plaza, (about five hundred in number,) ordered a charge. A hand-to-hand conflict took place between the forces; but so resolute was the charge, that the enemy were obliged to give way, being driven from their guns. They were pursued by our dragoons for some distance, but the pursuit was checked by the arrival of their reinforcements. Colonel Gorman's regiment, on arriving at the entrance to the city at about the same time as the reinforcements of

the enemy, opened a well-directed fire, which succeeded in routing them. With the left wing of his regiment he proceeded in person towards the upper part of the town, where the enemy still were, and succeeded in dispersing them. Colonel Wynkoop's command, with the batteries, assumed their position; but before they were within range, the enemy fled in haste. The same occurred with Captain Heintzleman's command. The enemy entering the town becoming somewhat scattered, Major Lally, with his regiment, proceeded across the fields to cut off his rear and intercept his retreat. This movement not being perceived, I ordered him to advance towards the town; thus depriving him, unintentionally, of an opportunity of doing good service. Captain Walker's force had been engaged some three-quarters of an hour before the infantry arrived to his support. He succeeded in capturing two pieces of artillery from the enemy, but was not able to use them, owing to the want of priming-tubes, although every effort was made."

The victory, however, was not achieved without the loss of this distinguished officer. He had routed the enemy in the plaza at the very moment he fell mortally wounded. His loss was deeply deplored, and the more so as he had contributed so essentially to the victory achieved. The total loss on the American side was thirteen killed and eleven wounded. One six-pounder brass gun, and one mountain howitzer, both mounted, were captured, together with a large quantity of ammunition and several waggons. The loss of the enemy was about one hundred and fifty.

In the action of the 19th, at Atlixco, ten leagues from Perote, General Lane's force consisted of the fourth Ohio and fourth Indiana regiments, Major Lally's and Captain Heintzleman's battalions, Colonel Wynkoop's battalion of four companies, first Pennsylvania volunteers, Captain Taylor's and Lieutenant Pratt's batteries of light artillery, and a squadron of dragoons, commanded by Captain Ford, third dragoons. About three leagues from the city, the advance guard of the enemy was first discovered. These on the arrival of the cavalry were pursued for a mile and a half. On arriving at a small hill, however, they made a stand, and fought severely until the American infantry

Battle of Huamantla—Death of Captain Walker

appeared, when they took to flight. The dragoons were again ordered to follow. After a running fight of nearly four miles, and when within a mile and a half of the city, the whole body of the enemy, under command of General Rea, was discovered on a side hill, covered with chapparal forming hedges, behind which they had taken post. Here a bloody conflict ensued. During its continuance the infantry appeared, upon which the enemy again retreated. The column now pressed on, but night set in ere they could reach the city. But, favored by a fine moonlight, the artillery, which had come up, was posted on a hill, near to the town, and overlooking it, and open to its fire. From this point an effective fire was directed upon the city. Every gun was served with the utmost rapidity; and the crash of the walls and the roofs of the houses, when struck by the shot and shell, was mingled with the roar of the artillery. After firing for three-quarters of an hour, the firing from the town having ceased, the American troops entered, and General Lane was now waited upon by the ayuntamiento, desiring that their town might be spared. The loss of the enemy was two hundred and nineteen killed and three hundred wounded. But one American was killed and but one wounded. The victory here was the more important as Atlitxco had for some time been the head-quarters of guerillas in that section of country. This victory achieved, General Lane with his command returned to Puebla.

The occupation of the city of Mexico by the American army, detailed in a preceding page, may be considered as essentially terminating the war. A few other engagements between detachments of the two armies occurred at subsequent dates, the principal of which, however, have been noticed; but the great and long-desired object had been reached—the possession of the proud capital of the Aztecs; and now over the “Halls of the Montezumas” the American banner literally floated in triumph.

To the Mexicans this event was most unexpected and humiliating. It crushed their hopes and paralyzed their efforts. With distraction in their public councils—their congress broken up—their generals dispersed, and their

soldiery dispirited, there remained to them no rational prospect of continuing the war with vigor and success.

In this posture of affairs, overtures for an adjustment of difficulties by a treaty were renewed by Nicholas P. Trist, United States' commissioner to the President of the Mexican republic. After several months' delay, owing in part to the difficulty of convening a quorum of the Mexican congress, and perhaps still more to the divided state of public opinion, negotiations were opened; and, at length, on the 2d day of February, 1848, a "treaty of peace, friendship, and settlement," was signed at Guadalupe Hidalgo by Mr. Trist, in behalf of the United States, and Luis G. Cuivas, Bernardo Conto, and Miguel Atristain, commissioners on behalf of Mexico. On receiving the treaty, the President of the United States submitted it to the consideration of the Senate. In that body, the debate, it is understood, was long and exciting: to most of the senators, the terms of the treaty were far from being satisfactory; and, in addition, it was understood that the powers of Mr. Trist had been revoked, and himself recalled, prior to the negotiations which issued in this treaty. But the hazard, in case of its rejection, of a renewal of hostilities, and the indefinite continuance of war, already sufficiently sanguinary and burdensome to both nations, induced the Senate to concur in its ratification. Important amendments, however, having been made by that body, it became necessary to return it to Mexico, for the concurrence and sanction of the Mexican government. With a view of explaining the modifications which the treaty had undergone in the American Senate, and to facilitate its ratification by the Mexican government, the Hon. Mr. Sevier, of the Senate, and Hon. Nathan Clifford, Attorney General of the United States, were appointed commissioners, with full powers to proceed to Mexico, and to exchange ratifications with the Mexican government, in case the latter adopted the treaty as modified. These gentlemen reached the city of Queretaro, the seat of the Mexican congress, on the 25th of May. Already the House of Deputies had sanctioned the treaty; and on the day of the arrival of the American commissioners, it was adopted by the Mexican Senate by the strong vote of thirty-three to five.

The ratified treaty was duly announced to the American people by the President's proclamation, bearing date July 4th; thus coinciding with that of the Declaration of American Independence. On the 6th it was officially communicated to Congress, accompanied by a congratulatory message from the President.

The most important provisions of this treaty relate to boundary lines—"consideration" due to Mexico—indemnity to American citizens—and the withdrawal of troops from the Mexican territory.

"The boundary line between the two republics," according to the fifth article, "shall commence in the Gulf of Mexico, three leagues from land, opposite the mouth of the Rio Grande, otherwise called Rio Bravo del Norte, or opposite the mouth of its deepest branch, if it should have more than one branch emptying directly into the sea; from thence up the middle of that river, following the deepest channel, where it has more than one, to the point where it strikes the southern boundary of New Mexico; thence westerly along the whole southern boundary of New Mexico, which runs north of the town called Paso, to its western termination; thence northward, along the western line of New Mexico, until it intersects the first branch of the river Gila; or, if it should not intersect any branch of that river, then to the point on the said line nearest to such branch, and then in a direct line to the same; thence down the middle of the said branch, and of the said river, until it empties into the Rio Colorado; thence across the Rio Colorado, following the division line between Upper and Lower California to the Pacific Ocean." The free navigation of the Gulf of California and of the river Colorado, from the mouth of the Gila to the Gulf, is secured to the United States. The southern and western limits of New Mexico, mentioned in the above article, are those which are laid down in a map of the United Mexican States published in 1847, by J. Disturnell, New York.

The "consideration" which the United States are to pay to Mexico, for the above territory, is stipulated in the twelfth article, and is to be fifteen millions of dollars. Of this sum three millions were paid on the ratification of the treaty;

and the remaining twelve millions are to be paid, in the gold or silver coin of Mexico, in four annual instalments, of three millions each, with interest at six per cent., and at the city of Mexico. No portion of this sum is transferable.

In respect to claims of American citizens against Mexico, the thirteenth article provides that the government of the United States shall severally assume and pay all such claims; both those already decided, and those still undecided—the whole, however, not to amount to more than three millions and a quarter of dollars: said claims to be ascertained by a Board of Commissioners.

The United States' government further engages to protect Mexico from the hostile Indian tribes inhabiting the ceded territories, and to pay for their depredations, be they more or less, as "security for the future."

The troops of the United States, the treaty further provides, shall leave Mexico, in three months after the ratification of the treaty, unless the sickly season should come on, in which event they are to retire to some healthy situation, and are to be furnished with supplies by the Mexican government on amicable terms.

The territories of New Mexico and Upper California, thus ceded to the United States, are sufficiently large for a great empire. They embrace nearly ten degrees of latitude, lying adjacent to the Oregon territory, and extend from the Pacific to the Rio Grande—a mean distance of nearly one thousand miles.

By the possession of the ports of San Diego and the Bay of San Francisco, the United States will doubtless be able to command the commerce of the Pacific. Seven hundred American whale ships are now employed on that sea, requiring more than twenty thousand seamen to navigate them, and involving a capital of not less than forty millions of dollars. By these acquisitions we are brought into immediate proximity with the west coast of America, from Cape Horn to the Russian possessions north of Oregon; with the islands of the Pacific Ocean; and by a direct voyage in steamers, we shall be in less than thirty days of Canton and other parts of China.*

* President's Message.

California and New Mexico, deemed by many, at the time of their acquisition, of little value to the United States, excepting the Bay of San Francisco, have suddenly acquired a great importance, especially the former, by reason of large quantities of gold said to exist in its soil, and of which already considerable amounts have been gathered, in the form of lumps and gold dust.

Upper California, geographically considered, embraces several distinct divisions. The grand feature is a range of mountains called the *Sierra Nevada* (Snowy mountain), dividing it into two parts, and exercising a decided influence on the climate, soil, and productions of each. This mountain range stretches along the coast, at the general distance of one hundred and fifty miles from it. East of the Sierra Nevada, and between it and the Rocky mountains, is the *Great Basin*, of some five hundred miles in diameter, and four or five thousand feet above the level of the sea, shut in on all sides by mountains. Its general character is that of a desert, but with some exceptions, there being portions of it fit for the residence of a civilized people, and of these parts, the Mormons have lately established themselves in one of the largest and best.

West of the Sierra Nevada lies the *Maritime region*, which is the second grand division of California, and which, according to Colonel Frémont, is "the only part to which the name applies, in the current language of the country. It is the occupied and inhabited part, and so different in character—so divided by the mountain-wall of the Sierra from the Great Basin above—as to constitute a region to itself, with a structure and configuration—a soil, climate, and productions—of its own; and as northern Persia may be referred to as some type of the former, so may Italy be referred to as some point of comparison for the latter. North and south, this region embraces about ten degrees of latitude—from thirty-second degree, where it touches the peninsula of California, to forty-second degree, where it bounds on Oregon. East and west, from the Sierra Nevada to the sea, it will average, in the middle parts, one hundred and fifty miles; in the northern parts, two hundred—giving an area of above one hundred thousand

square miles. Looking westward from the summit of the Sierra, the main feature presented is the long, low, broad valley of the Joaquin and Sacramento rivers—the two valleys forming one—five hundred miles long and fifty broad, lying along the base of the Sierra, and bounded to the west by the low coast range of mountains, which separates it from the sea.”

The valleys of the Sacramento and San Joaquin are one, but discriminated by the names of the rivers which traverse it. These are the San Joaquin and Sacramento, already named. They rise at opposite ends of this valley, receive numerous streams, some of them bold rivers from the Sierra Nevada, and, at length, meet and enter together the Bay of San Francisco, in the region of tide-water, making a continuous water-line from one end to the other.

The valley of the San Joaquin is about three hundred miles long and sixty broad, with a general elevation of only a few hundred feet above the level of the sea. The valley of the Sacramento is divided into upper and lower—the lower, perhaps, exceeds two hundred miles; the upper, one hundred. The upper is entitled to this distinction, not only as being higher up on the river, but also from having a superior elevation of some thousands of feet above it. This upper valley is heavily timbered, and the climate and productions are modified by its altitude. The Sacramento river is navigable to the rapids, a distance of two hundred miles, increasing from one hundred and fifty to six hundred yards in the lowest part of its course.

The Bay of San Francisco has been celebrated, from its earliest discovery, as one of the best in the world. It is separated from the sea by low mountain ranges. Through these ranges is a single gap, resembling a mountain pass. This is the entrance to the great bay, and is the only water communication from the ocean to the interior country.

It has a total length of seventy-five miles, or about thirty-five miles, north and south of the entrance. It is divided, by straits and projecting points, into three separate bays, of which the northern two are called San Pablo and Suisoon bays. The head of the bay is about

Lewis Cass.

De Witt Clinton.

forty miles from the sea, and there commences its connexion with the noble valleys of the San Joaquin and Sacramento. The depth of water in the bay is sufficient for the largest ships; and here, it is said, the navies of the world might all ride in safety.*

The great point of interest, in this newly-acquired territory, is the valley of the Sacramento—this being, in various portions of it, distinguished for its "*placers*," or gold deposits, and which are now attracting the attention of the civilized world. It is probable that the existence of gold, in these regions, has long been known to individuals, but kept a secret, until a trivial circumstance brought the fact into general notice. At the distance of about forty miles up the Sacramento, is a place known as Sutter's fort. At a considerable distance from this place, higher up, Captain Sutter, desirous of erecting a saw-mill, contracted for that purpose with a Mr. Marshall, in September, 1847. When completed, and the water was let on to the wheel, the tail-race was found to be too narrow to allow the water to escape with sufficient rapidity. To save labor, Mr. Marshall let the water directly into the race with a strong current, so as to wash it wider and deeper. He effected his purpose, and a large bed of mud and gravel was carried to the foot of the race.

One day, Mr. Marshall, as he was walking down the race to this deposite of mud, observed some glittering particles at its upper edge. He gathered a few, examined them, and became satisfied of their value. Repairing to the fort, he made known the discovery to Captain Sutter, and his impressions of its importance. Such, it is believed, are the circumstances which led to the recent discovery of the existence of gold in that region. Further explorations soon followed, and, at length, satisfactory evidence was furnished that large portions of the valley abound with the precious metal.

It is needless to enter into further details. Nor shall we attempt to describe the excitement which has grown out of this discovery, nor to estimate the thousands who

* Frémont's California.

have set sail to this newly-discovered El Dorado. The excitement is pervading the land; it is extending to all the various portions of the world—and from all parts of the Southern continent—from the various countries of Europe—and the islands of the sea, vessels loaded with panthers in the chase, are either already traversing the wide waste of waters, or preparing to traverse them, in quest of the “shining dust.”

The future history of this “gold mania” will doubtless be pregnant with exciting scenes.

The administration of Mr. Polk, notwithstanding the party to which he owed his elevation supported him in his measures, cannot be said to have been popular. As an evidence of this, few, if any, seriously favored his reëlection. At the national democratic convention, held in Baltimore, on the 21st of May, 1848, for the nomination of a candidate for the presidency, others were brought forward, while he was not named. The prominent names were those of Lewis Cass, of Michigan, James Buchanan, of Pennsylvania, and Levi Woodbury, of New Hampshire. After several ballotings, Lewis Cass was duly nominated. General W. O. Butler, of Kentucky, was nominated for the vice-presidency.

In June following, (7th,) a whig national convention was held in Philadelphia for a similar purpose. The principal candidates were Henry Clay, of Kentucky, General Zachary Taylor, of Louisiana, and General Winfield Scott, of New Jersey. The result of several ballotings was the nomination of General Taylor, who, of the two hundred and eighty votes cast, received one hundred and seventy votes. Mr. Clay had thirty-two, and General Scott sixty-three. Millard Fillmore, of New York, was nominated for the vice-presidency.

In the Baltimore democratic convention, the state of New York was not represented. Two separate sets of delegates, from two separate conventions held in that state, were present, and each claimed seats; and while a portion of the convention were inclined to admit one set and exclude the other, and some were in favor of the admission of both, it was at length decided to exclude both. In

consequence of this exclusion, the free-soil party adopted measures to convene another convention, which met at Utica, and nominated Martin Van Buren. The object of this party was two-fold—to defeat Mr. Cass, and next, to lay the foundation for organizing a free-soil party, designed ultimately to gain a political ascendancy in the United States.

During the summer following, the friends of the respective candidates were not idle. While their efforts were not characterized by the enthusiasm and intemperance of some former electioneering campaigns, no probable means of final success were omitted. Conventions were held; speeches were made; pamphlets circulated; political agents itinerated the country, and the press, as usual, gave currency to every good and evil report, as suited its political taste and interests.

At length, in November, the election was held, and resulted in the choice of a majority of electors friendly to the election of General Taylor. On the 14th of February, 1849, the votes of the several electoral colleges were opened and counted, agreeably to the constitution, in the presence of both houses of congress; when it appeared that the whole number of votes given was two hundred and ninety, of which General Taylor received one hundred and sixty three, and accordingly was declared to be elected. Millard Fillmore, having a like number of votes for the vice-presidency, was so proclaimed. Lewis Cass and General W. O. Butler had each one hundred and twenty-seven votes for the respective offices for which they were nominated. Mr. Van Buren failed to receive the vote of a single state.

The thirtieth congress closed its second session on the 3d of March, or rather extended it to about seven o'clock on the morning of the Sabbath, a practice which cannot be too severely condemned, and which, it is to be devoutly hoped, may never occur again. This must be considered the more censurable, as but few measures of signal importance were proposed for the session, and the most prominent of those few utterly failed. California was left without any provisional government—the more to be

regretted from the great influx of people from various quarters of the globe, between whom jealousy and rivalry are likely to spring up, not only because of their national partialities and different customs, but especially from interferences one with another in their search after gold. A new department was created, called the "Home Department"—an important office, and one which, taking certain branches of business hitherto belonging to the state and treasury departments, will greatly relieve the officers at the head of those departments.

The presidential term of Mr. Polk ended on the 3d of March. The inauguration of General Taylor, according to the constitution, would have taken place on the 4th, but as that day was the Sabbath, it was postponed to the following day, when it took place with the usual imposing ceremonies.

At ten o'clock the new senate was organized. Rev. Mr. Slicer, chaplain of the senate, performed the usual devotional exercises. At half-past twelve o'clock, the president elect, supported by the ex-president, preceded by the committee of arrangements, entered the senate chamber. Shortly after, a procession was formed, and moved to the eastern portico of the capitol, where, in the presence of gathered thousands, General Taylor delivered his inaugural address; immediately following which, the oath of office was administered to him by Chief Justice Taney.

The inaugural address of General Taylor was the shortest ever delivered by any president since the formation of the government, except Mr. Madison's. Yet, it was sufficiently full and satisfactory to a large majority of his political friends. It did not abound in professions or pledges, and, perhaps to a few, it might have been more acceptable, had he developed his views in relation to certain questions of policy, on which he observed a studied and perhaps sagacious silence. It was a plain, manly, comprehensive document, couched in beautiful and eloquent terms; its brevity is worthy of all praise, and in this respect, if in no other, is a model worthy of future imitation. On points of greatest national importance, General Taylor was clear and unequivocal.

THE EVERGLADES OF FLORIDA.

We quote a few paragraphs of the address, which set forth his aims and objects:

“With such aids [the legislative and judicial branches of the government] and an honest purpose to do whatever is right, I hope to execute diligently, impartially, and for the best interests of the country, the manifold duties devolved upon me. In the discharge of these duties, my guide will be the constitution which I this day swear to ‘preserve, protect, and defend.’ For the interpretation of that instrument, I shall look to the decisions of the judicial tribunals established by its authority, and to the practice of the government under the earliest presidents, who had so large a share in its formation.

“Chosen by the body of the people, under the assurance that my administration would be devoted to the welfare of the whole country, and not to the support of any particular section or merely local interests, I, this day, renew the declarations I have heretofore made, and proclaim my fixed determination to maintain, to the extent of my ability, the government in its original purity, and to adopt, as the basis of my public policy, those great republican doctrines which constitute the strength of our national existence.

“It shall be my study to recommend such constitutional measures to Congress as may be necessary and proper to secure encouragement and protection to the great interests of agriculture, commerce, and manufactures; to improve our rivers and harbors; to provide for the speedy extinguishment of the public debt; to enforce a strict accountability on the part of all officers of the government, and the utmost economy in all public expenditures; but it is for the wisdom of Congress itself, in which all legislative powers are vested by the constitution, to regulate these and other matters of domestic policy.

“In conclusion, I congratulate you, my fellow-citizens, upon the high state of prosperity to which the goodness of Divine Providence has conducted our common country. Let us invoke a continuance of the same protecting care, which has led us from small beginnings to the eminence we this day occupy, and let us seek to deserve that by prudence and moderation in our councils; by well-directed

attempts to assuage the bitterness which too often marks unavoidable differences of opinion; by the promulgation and practice of just and liberal principles; and by enlarged patriotism, which shall acknowledge no limits but those of our own wide-spread republic."

The senate having been summoned by Mr. Polk to meet on the day of the inauguration, with reference to an organization of the new administration, General Taylor, on the 6th, submitted the following nominations of members of his cabinet, which were duly confirmed, viz: John M. Clayton, of Delaware, Secretary of State; William M. Meredith, of Pennsylvania, Secretary of the Treasury; Thomas Ewing, of Ohio, Secretary of the Home Department; George W. Crawford, of Georgia, Secretary of War; William B. Preston, of Virginia, Secretary of the Navy; Jacob Collamer, of Vermont, Postmaster General; Reverdy Johnson, of Maryland, Attorney General.

No other nation presents such a spectacle as the people of the United States. Our election campaigns are without a parallel. What bustle, strife, and even angry contests are witnessed at our polls! But the question once settled—and however settled—in a few hours all is hushed—"the noise of the waves and the tumults of the people." Each partisan, whether of the victors or of the vanquished, turns off to his appropriate calling, and the government, whatever be its political complexion, is organized without further excitement, and proceeds to the execution of its duty, as calmly as if it had been wafted into power on the most tranquil sea and by the most gentle breeze.

CHAPTER XXIX.

Death of President Taylor—Compromise of 1850—Slavery and Anti-Slavery—Buchanan's Administration—John Brown's Raid—Secession of the Southern States—Firing on Fort Sumter—Inauguration of Abraham Lincoln—Virginia Secedes—Evacuation of Norfolk Navy Yard—Western Virginia—Blockade of Southern Ports—Battle of Bull Run—Naval Expeditions—McClellan appointed to the Command—Campaign of 1862—Gen. Grant's Movements in the West—Capture of New Orleans—Emancipation—The Merrimac and the Monitor—Discouraging Prospects—Lee's Invasion—Battle of Gettysburg, and Capture of Vicksburg.

ON Wednesday evening, at half-past ten o'clock, on the 9th day of June, 1850, President Zachary Taylor died. The duties of the presidential office at once devolved on the Vice President, Millard Fillmore, by a provision of the constitution. The members of the cabinet immediately tendered their resignations; but at the request of President Fillmore, they retained their offices for a few days to give him an opportunity for care and inquiry in selecting their successors. The cabinet chosen by President Fillmore consisted of the following officers :

Secretary of State.—Daniel Webster, Mass.

Secretary of the Treasury.—Thomas Corwin, Ohio.

Secretary of the Interior.—Thos. M. T. McKennan, Pa.

Secretary of War.—Charles M. Conrad, La.

Secretary of the Navy.—Wm. A. Graham, N. C.

Attorney General.—John J. Crittenden, Ky.

Postmaster General.—Nathan K. Hall, N. Y.

The important business of the long session of Congress (1849-50) was the passage of the several acts which constituted what was called the "compromise measures of 1850." The first of these in order was the bill establishing the boundaries of Texas and giving her \$10,000,000 for her claim to a portion of New Mexico. This bill was passed September 7th by the House (108 to 98), and by the Senate on the 9th (31 to 10). On the 7th of October, the House took up the bill from the Senate admitting California into the Union. The bill for admitting California was passed—yeas 150 nays 56. On the same day the bill from the Senate organizing a territorial government for Utah was taken up, and Mr. Wentworth, of Illinois, moved to amend it by inserting a clause prohibiting the existence of slavery within the territory. This was lost—ayes 69, nays 78. Mr. Fitch, of Indiana, moved an amendment, declaring that the Mexican law prohibiting slavery, should remain in full force in the territory; after some discussion this was rejected—ayes 51, nays 85. Several other amendments were introduced and lost, and the bill finally passed by a vote of 97 ayes and 85 nays. The bill to facilitate the recovery of fugitive slaves was taken up in the Senate on the 20th of August. Mr. Dayton submitted an amendment providing for a trial by jury of the question, whether the person who may be claimed is or is not a fugitive slave. After some debate the amendment was rejected by a vote of ayes 11, nays 27. On the 26th the bill had its final reading, and was passed. On the 12th of September the House of Representatives took up the bill, and after some slight debate, passed it, under the operation of the previous question, by a vote of 109 ayes to 75 nays.

While the issue of the Hungarian contest was yet doubtful, President Taylor had dispatched Mr. A. Dudley Mann to Vienna, as special agent, with instructions to watch the progress of the movement, and in case of its success to recognize the Hungarian Republic. Any such action was prevented by the overthrow of the Hungarian cause; but the Austrian Chargé at Washington, Chevalier Hulse-mann, took occasion of the communication to the Senate

of the instructions given to Mr. Mann to enter, in the name of his government, a formal protest against the procedure of the United States, as an unwarrantable interference in the affairs of a friendly power; and as a breach of propriety in national intercourse, jeopardizing the amity between the two countries. He took special exceptions to the epithet *iron rule*, said to be applied to the government of Austria, to the designation of Kossuth as an illustrious man, and to improper expressions in regard to Russia—"the intimate and faithful ally of Austria." He said that Mr. Mann had been placed in a position which rendered him liable to the treatment of a spy; and concluded by hinting that the United States were not free from the danger of a civil war, and were liable to acts of retaliation. To this protest a most masterly and conclusive reply was furnished by Mr. Webster. Seizing upon the fatal admission of Mr. Hulsemann that Austria would not have felt itself constrained to notice the matter, but for the message of the President to the Senate, he showed that in taking exception to any communication from one department of our government to another, Austria was guilty of that very interference in the affairs of a foreign power of which she complained. But waving this decisive advantage, Mr. Webster went on to show that the conduct of the United States was in perfect accordance with the practice of all civilized governments, and Austria in particular; that the epithet, "*iron rule*," applied to the Austrian government did not occur in the instructions; that the designation of Kossuth as illustrious, was precisely parallel to the favorable notice—no where more favorable than in Austria—accorded to Washington and Franklin, while they were technically rebels against Great Britain; and that as Russia had taken no exception to any mention of her, all such exception on the part of Austria was officious and uncalled for. Had Austria subjected Mr. Mann to the treatment of a spy, it would have placed itself beyond the pale of civilized nations, and the spirit of the people of this country would have demanded immediate hostilities to be waged by the utmost exertion of the power of the Republic. In respect

to the hypothetical retaliation hinted at, he said that the United States were quite willing to take their chance, and abide their destiny ; but that any discussion of the matter now would be idle : but in the meanwhile, the United States would exercise their own discretion in the expression of opinions upon political events. The reply concluded with the most exquisite irony, by assuring Mr Hulsemann that, believing the principles of civil liberty upon which our government is founded to be the only ones which can meet the demands of the present age, "The President has perceived with great satisfaction that in the constitution recently introduced into the Austrian empire, many of these great principles are recognized and applied, and he cherishes a sincere wish that they may produce the same happy effect throughout his Austrian majesty's extensive dominions that they have done in the United States."

On the adjournment of Congress, the President was authorized, by a joint resolution, to employ a national vessel to convey Kossuth and his compatriots with their consent, from Turkey to the United States. He arrived December 4th, 1851, at the city of New York. The progress of this enthusiastic patriot through the land, haranguing daily vast assemblages with transcendent eloquence, was a perpetual ovation. A kindred enthusiasm having been kindled in England, he returned thither to watch the progress of European affairs.

On June 29th, 1852, Henry Clay, after a lingering illness, died at Washington, aged seventy-five years. As he had lived universally admired, so he died universally mourned. On the 24th of October, not quite three months after, Daniel Webster also died at his residence in Marshfield. The death of John C. Calhoun not long prior to these two, made the third death within a few months of the greatest statesmen in America. Three men who, for an entire generation, had filled a larger space in the public view than any three contemporaries since the foundation of the Union.

The vacant post of State Secretary was filled by Edward Everett, one of whose first efforts was to reply to a

THE CAVALRY RAID.

BARRAGUT LANDING AT NEW ORLEANS

joint proposal from the French and English governments for a tripartite convention, securing Cuba for ever to Spain. It was universally pronounced a masterly and convincing paper.

On the 4th of March, Franklin Pierce was inaugurated President of the United States. On the 18th of April in the same year, the Vice President, Wm. R. King, died at his residence in Alabama. The cabinet of Pierce consisted of the following officers :

Secretary of State.—Wm. L. Marcy, New York.

Secretary of War.—Jefferson Davis, Mississippi.

Secretary of the Treasury.—James Guthrie, Ky.

Secretary of the Navy.—James C. Dobbin, N. C.

Secretary of the Interior.—Robt. McClelland, Mich.

Attorney General.—Caleb Cushing, Mass.

Postmaster General.—James Campbell, Pa.

The principal measure of the congressional session of 1853-4, was the so-named Kansas-Nebraska Bill. The object of this bill was to institute territorial governments over a vast region west of the Mississippi—the only region belonging to the United States which had not, as yet, been incorporated into either a State or Territory. Hon. Stephen A. Douglass introduced this bill, which would probably have passed immediately had it not contained some important and peculiar features, the chief of which was a *virtual* repeal of the compromise of Missouri of 1820, and the Jeffersonian ordinance of 1787, both of which for ever *prohibited* slavery in the region north of 36° 30'. Mr. Douglass' bill proposed repealing these measures so far as to leave to the settlers in these territories, when sufficiently numerous to constitute States in our Union, the liberty to establish slavery, or prohibit it, according to their own pleasure. There was a very strong opposition to this measure in the Senate, and also in the House. The opponents of the measure represented it as an infraction of a long-standing and solemn compact between the North and South. Numerous petitions from the free States were sent in, all of which strenuously asked

for its refusal. Several months' debate were necessary to decide the question; but finally the bill was passed in substantially the shape in which it came from the hands of the author.

Chevalier Hulsemann, on the 29th of August, made a protest against the forcible rescue, by Captain Ingraham, of Martin Koszta, a Hungarian, who had been illegally arrested by the Austrians as a refugee, though possessing papers extending over him the American protection, by virtue of domicile gained and purposed naturalization. The reply of Mr. Marcy, the new Secretary of State, was so cogent that Hulsemann surrendered the point in issue.

Some time prior to 1850, preparations had been made for a descent on the island of Cuba, with the design of wresting it from Spain, and either making it an independent republic, or one of the states of our American Union. A large quantity of war munitions and of money had been collected, and a body of men had been enlisted for the expedition, and assembled on Round Island.

President Taylor, however, being resolved to maintain intact the neutrality laws of the United States, had kept a vigilant eye on these movements, and, at the fitting moment, seized alike men, munitions, and money; and the "cause" for the time was completely stayed.

But Lopez, the originator and soul of the movement, was not thus to be discouraged. Although his New York partisans still assured him that, in spite of what had occurred, the "liberating expedition" should sail from that city, he concluded, after some delay, which proved fruitless, to rest his hopes upon the men of the West and South.

Early, therefore, in the spring of 1850, he passed down the Ohio and Mississippi to New Orleans, stopping at various points in Kentucky, Tennessee, and Mississippi, to confer with those interested in his project, and to concert measures for the sailing of an expedition from the above-named city. He found in those quarters many young men of the better class ready to join him in what seemed to them the cause of liberty and the pathway to glory. So that, soon after, the city of Cincinnati and the neighboring

region of Kentucky were both excited and perplexed by the announcement that a Capt. Hardy was organizing a company for *California*, which was to consist of robust, active, brave, and adventurous *young Americans*. All kinds of rumors and suspicions were of course rife, all agreeing that the name of California was intended to be a *blind*, but differing on all other points. Those who had fully committed themselves to the project, however, were told that the destination was Cuba, and were apprised of the conditions of their engagements, viz.: that during service they should receive such pay, &c., as are allowed in the United States army, and at the close of one year (or sooner if their work was sooner completed) a bounty of \$4,000 in money, or lands in Cuba. The officers were promised high rank in the army of the future republic and \$10,000 as a bounty. A report was also circulated that General Lopez was preparing a steamer, arms, etc., at New Orleans. A number of Hungarian refugees were also said to have joined the "liberators," and to have bought some artillery. About the same date, the Cincinnati company received a letter from New Orleans stating that "a battalion of 500 men had been organized in Mississippi, a fine battalion of artillery, and one of mountain howitzers, together with other additions, which strengthened the expedition to well nigh a certainty of success." It was added too, that *two steamers* had already been secured in New Orleans, capable of carrying more than 1000 men. Finally, on the 4th of April, 1850, the order came for all to embark on the Martha Washington. Ohioians and Kentuckians went aboard to the number of 170.

On the 25th of April, 250 men embarked in the steamer *Georgiana*, *really* for Cuba, but *nominally* for Chagres. After several days' sail, the steamer anchored at the island of Contoy, a small desolate rock some ten or twelve miles from the mainland of Yucatan, and nearly seventy-five miles from Cuba. The troops landed early next morning, May 7th.

About one week after the embarkation of the Kentuckians, already noticed, Col. C. R. Wheat, of New Orleans, having enlisted about 160 men in that city, many

of them the most worthless of characters, set sail with them, on board the brig **Susan Loud**, for Cuba. After cruising about in the neighborhood of the Belize for three or four days, she was overtaken by the steamer **Creole**, which had left New Orleans about May 10th, with the Mississippians above alluded to, and with Gen. Lopez and staff. The Louisianans then went on board the steamer, which immediately went in quest of the **Georgiana**.

She soon reached Contoy island, where Gen. Lopez immediately distributed a very stirring address among the troops. On the 16th of May, at 12 o'clock midnight, the **Creole** started for Cuba, containing the whole expedition, officers, arms, etc. It was determined for several reasons to land at Cardenas.

On the morning of the 16th of May, at one o'clock, the "liberators" landed at Cardenas. The garrison building, the governor's palace, a large church, and another long, low building, inclosed the plaza. The Spanish troops who occupied these buildings kept up an incessant fire on the invaders, which the latter returned with great spirit. The conflict raged with great fury for three hours; but about daylight the invaders battered down the garrison door, at which the Spanish soldiers rushed out, threw down their arms, and surrendered. Gen. Lopez finding the fire from the governor's palace was making great havoc among his troops, set fire to the lower story and the whole building was burnt to the ground.

Lopez, after the capture of Cardenas, made an address to the Spanish soldiers, who finally joined him with shouts of "Hurrah for Lopez and Liberty!" The general's aids strove actively to rouse the Cubans as volunteers, *but not one volunteered!* They gave as a reason that the liberating force was too small, and their joining Lopez, or showing him the least countenance, would be inevitable ruin.

Towards evening Lopez again embarked, but with much difficulty; for a large body of Spanish infantry attacked the invaders and much hard fighting was necessary to cover the embarkation of the troops. At nine o'clock, all being on board, the **Creole**, with her disappointed

freight, left the Cuban shore. She had gone but a few miles before she grounded on a sand-bar, from which she was with much difficulty extricated by a whole night's labors. They then steered for Key West, and anchored that night within forty miles of their destination. Early next morning, taking a pilot aboard, they steered for the Key. When within thirty miles of it, the smoke of another steamer was seen some miles off, which Lopez soon made out to be the Pizarro, which, discovering the Creole, at once gave chase. It was only by the most desperate efforts, by burning bacon, red shirts, etc., on the failure of the coal, and even then by a mere hair's breadth, that the Creole escaped and entered safely the harbor of Key West.

This total and ignominious failure rather dampened the ardor of the "liberators;" but Lopez, no way discouraged, enlisted more men, and another expedition was started. President Fillmore resolved, like Taylor, to maintain the neutrality laws, and denounced by proclamation the criminality of these efforts.

In August, 1851, however, the steamer Pampero, with Lopez and about 400 men, sailed for Cuba, and landed at the town of Bahia Honda. As on the former occasion none of the inhabitants joined them; they were left alone to combat the vastly superior forces of the Spanish government, the country at the same time swarming with persons hostile to the invaders.

Supplies, however, being needed, Lopez set out for the interior to take refuge in the mountains. Colonel Crittenden was left, with sixty men, to take charge of the baggage. His little party was attacked by a numerous body of Spaniards and defeated. Colonel Crittenden and fifty-two of his men, in attempting to escape in open boats, were picked up by the Pizarro, and carried in irons to Havana. They were immediately tried, condemned, and shot. Lopez and his companions after desperate fighting were defeated, and most of them captured. Lopez himself, being sent to Havana, was soon put to death by the *garoté*, a Spanish instrument of execution.

A considerable number of the invaders were transferred

to Spain. The queen with praiseworthy clemency pardoned them all, and sent them back to the United States. Thus disastrously terminated another revolutionizing Cuba expedition.

During the war between Russia and the allied powers of England, France, Sardinia, and Turkey, Mr. Crampton, the British minister at Washington, assisted by the British consuls in New York, Philadelphia, and Cincinnati, caused a considerable number of men to be enlisted in the United States for the British army. On proof of this violation of our neutrality laws, the President demanded Crampton's recall by the British government. This being declined, all the offending functionaries were dismissed by the President in May, 1856.

In June of the same year, Mr. Buchanan, of Pennsylvania, was nominated by the Democratic Convention at Cincinnati, as a candidate for President of the United States; and in the same month, Colonel Fremont was nominated for the same office by the Republican Convention at Philadelphia. Ex-president Fillmore had been nominated by the American party in February, 1856.

In the summer of 1856, the affairs of the newly organized Territory of Kansas formed the principal subject of attention and excitement. A committee of Congress, sent to examine the subject in the Territory, reported that the election of the existing Legislature had been effected by fraudulent votes of persons coming from Missouri. Meantime civil war was raging in the Territory, and armed parties from slaveholding States were robbing and killing the free inhabitants, expelling others from the Territory, and preventing settlers from the free States from entering the Territory. A considerable force of United States troops, under Colonel Sumner, drove out a part of the invaders, and restored comparative quiet.

This state of strife and contention continued without much improvement all through the remainder of Pierce's administration, and plans for amendment formed the themes of controversy during the next Presidential campaign. The old Whig party gave way to the new "Republican" one, and nominated John C. Fremont, of

THE FAMOUS IRONCLAD "MONITOR."

California, for President, and Wm. L. Dayton, of New Jersey, for Vice-President, whilst the Democrats chose James Buchanan, of Pennsylvania, and John C. Breckinridge, of Kentucky, as their candidates. The platform adopted by the former was, that it was the right and duty of Congress to prohibit in the territories "the twin relics of barbarism, polygamy and slavery." The Democratic platform was the endorsement of the Kansas-Nebraska bill, which permitted each territory to make its own provisions in regard to slavery within its borders. The contest resulted in the election of the Democratic candidates, who were duly inaugurated March 4th, 1857.

Under the new administration the Kansas difficulties were continued with all their previous characteristics. There were two strong parties ; one trying to perpetuate slavery, and the other advocating the admission of the territory as a free State. At last, after a long struggle, the Free State party prevailed, and on Jan. 21st, 1861, Kansas was admitted into the Federal Union as the thirty-fourth State, and with a free Constitution. Minnesota had been admitted on May 11th, 1858.

It was towards the close of the year 1859, that a man named John Brown, who had already made himself conspicuous on Kansas soil as an advocate of freedom, endeavored to carry out a long-planned scheme for the purpose of freeing the slaves in Virginia. He had already procured a large quantity of arms, with which he intended to arm the blacks, and having stored them near Harper's Ferry, at midnight on the 16th of October, he, with a small force of about two dozen men, seized the U. S. Arsenal and armory, as an initial step. The negroes around the neighborhood were then to rise and join in the movement, but owing to some misunderstanding or mistake on their part, they failed to keep their engagements, and their would-be liberators were all either killed or captured by United States officials, who arrived on the spot on the morning of the 18th, and found them still holding possession of the buildings. The men fought desperately before they were taken, but

were at last compelled to surrender themselves, John Brown among the number, and they were all placed in prison to await trial. This resulted in conviction of the crime of treason, for which they were executed at Charlestown, Va., Dec. 2d, 1859.

The slavery question was now the most important one before the country, and the various issues growing out of it were discussed with angry and excited words at every political gathering. All saw the impending crisis, and yet were powerless to avert it.

President Buchanan did nothing to help matters, but on the contrary, his annual message of Dec. 3d, 1860, offended both the Northern and Southern politicians, as it denounced the anti-slavery party, and advocated the rights of slave-holders, at the same time that it denied to the Southern States the rights of peaceable secession. But he was evidently doing what he could to favor the Southern cause, aided by his cabinet officers, who were all committed to the same side. Our ships-of-war were sent to cruise in distant waters, where there was no occasion for their presence, until our navy was reduced to but two or three available vessels, and munitions of war were also sent to various points in the South, all with a view to future exigencies, which these wise Southerners so well knew to be at hand.

Between the 20th of December, 1860, and the 5th of February, 1861, seven of the Southern States passed ordinances of secession, South Carolina being the one to take the lead. Most of the forts, arsenals, and other government property were then seized by the different State authorities, and garrisoned by Southern men. Fort Sumter, a very strong fortification in Charleston harbor, was in command of Major Robert Anderson, with a small garrison of loyal men, but the two remaining forts—Moultrie and Morris Island—had already been taken possession of by the Southerners. On the 9th of January, 1861, the steamer *Star-of-the-West*, with reinforcements and supplies for Fort Sumter, was fired upon by the guns of Moultrie and Morris Island, and prevented from communicating with the gallant

Anderson, and thus was the civil war begun in earnest even before it had been openly or officially declared.

On the 11th of March, the so-called "Confederate States of America" adopted their Constitution, having slavery for its corner-stone, and elected Jefferson Davis as President, with Alexander H. Stephens as Vice-President.

While all these preparations were in progress, a new President of the United States had also been elected, and on March 4th, 1861, Abraham Lincoln, the successful candidate of the Republican party, was duly inaugurated. His election had been the immediate occasion of the secession of the Cotton States, and the South chose to regard him as a common enemy to all their rights. In vain he offered the olive branch of peace, and promised protection and friendship to the rebellious citizens, over whom he was appointed ruler; they were bent upon disunion, and it was too late now even for compromise.

Soon after the inauguration of the new President, a delegation from the Southern Confederacy waited on him for the purpose of making terms, proposing the partition of public property, and expecting a recognition of their position as a separate government. But Mr. Lincoln informed them that he could receive them only as American citizens, and they returned with chagrin to their Southern homes. The war was now imminent, and open and active measures were at once begun by the United States Government, first by sending reinforcements to Sumter, and Fort Pickens, Florida, and also by fitting out ships-of-war, to be sent wherever future occasion demanded.

On April 7th, several vessels laden with provisions for the suffering garrison at Fort Sumter, sailed from New York, and on the 8th, Governor Pickens, of South Carolina, was informed of the intention of the Government. On the 12th, the fleet approached with the hope of effecting the desired object, but the Confederate General, Beauregard, having first demanded a surrender, which was refused by Major Anderson, opened fire upon the

fort, and after thirty-four hours' bombardment, the gallant commandant surrendered under honorable conditions, and went on board one of the vessels of the fleet with his officers and men. They had held out until their stock of provisions was almost gone, and starvation compelled them to leave the place.

The news of the fall of Sumter occasioned great excitement in all sections of the country, and on April 15th, the President issued his first call for troops. Seventy-five thousand men were asked for, and everywhere loyal citizens volunteered for the service, the greatest enthusiasm prevailing throughout the loyal States. Within one week the whole number were ready for duty. On the 19th, the 6th Massachusetts regiment was fired upon by an excited mob in the streets of Baltimore, but the riot was speedily quelled, and the regiment proceeded on its way to the depot, there taking the cars for Washington.

On the 17th of April, Virginia seceded from the Union, and at once began to act on the defensive. Obstructions were placed in the Elizabeth River, which leads from Hampton Roads to Norfolk, and a military force was sent to seize the Navy Yard at the latter place, together with the vessels and other property there, amounting in value to some ten millions of dollars. This included five large vessels, with two thousand stand of arms, more than a thousand heavy cannon, and immense quantities of naval stores and ammunition.

On the evening of the 20th the commandant, Capt. McCauley, began to destroy the vessels to prevent their falling into the hands of the rebels, and all were scuttled except the Cumberland. Captain Paulding, of the Pawnee, assisted in this hasty work, and having done all they could in the short space of time allotted them, the Cumberland and Pawnee, with men and movable valuables, left Norfolk, the enemy taking immediate possession and raising the Southern flag.

Although the eastern portion of Virginia was in favor of secession, yet the western part beyond the mountains was opposed to it, and it was accordingly decided

Battle of Mobile Bay.

by both sections that a division would be prudent. On the 11th of June, it was therefore voted in the Virginia Legislature to set off the western part of the State as a separate government, and Jan. 26th, 1862, it was admitted into the Federal Union as "West Virginia."

On April 27th, 1861, President Lincoln proclaimed the blockade of the Southern ports, and the principal ones were soon effectually closed by an efficient naval force. Ships were stationed here and there all along the sea-board, and also in the Gulf of Mexico, and on the Mississippi, to prevent all vessels laden with cotton leaving, or any others from entering with supplies.

The first battle of the war was fought at Bull Run, not far from Manassas Junction, in Virginia, in which 25,000 Union troops took part, and about an equal number on the other side. Both armies fought bravely, and for many hours the result was doubtful; but at length, reinforcements came for the Confederates, and that gave them an advantage which the other side could not match, and the battle ended in a total defeat to the Union troops. A feeling of dismay and discouragement came over the country when the news of this defeat was known, but the Southern heart was cheered with stronger hopes, and they soon entered the field again with still larger numbers.

It was now evident that the war was to be a long one, and that fresh enlistments, and for longer periods, must be made; for the original 75,000 who had entered for three months only, were ready to leave the army, the time having expired. This defeat, unfortunate as it then seemed, was perhaps advantageous to the cause, since it roused the nation to a true sense of its danger, and drew forth all the latent patriotism, until, before many weeks, the Union army was doubled in numbers. Some of the best men of the North, who until then had failed to realize the true gravity of the situation, volunteered their services, and entered for one or two years. On the other hand, the South, flushed with success, became confident and exultant, little dreaming of the hard work still before them.

While these things were taking place at the East, the Confederates suffered some defeat in the West, where General Lyon, in Missouri, assisted by Col. Sigel, with only 3,700 troops all told, gained a remarkable victory over 23,000 Southerners. In the engagement the gallant Lyon was himself killed.

Besides these land operations, there was active work along the coast, where the navy was doing good service. Expeditions were sent to various points—to Fort Hatteras, in Virginia, and to Port Royal harbor, in South Carolina, and thus very important positions were obtained which were held during the remainder of the war. Thus the first year drew towards its close without any decisive results, yet with very encouraging prospects for the future. The navy had been greatly enlarged, by the fitting up of a great many vessels for the blockades, and these were active in guarding the ports, and also in the capture of privateers, which were sent out by the Confederate government to prey upon American commerce. These were fitted out chiefly in English ports, and England, as well as France, Spain, and Portugal, recognized the rights of the Southern Confederacy as belligerents, thus placing them on a par with our National government. This unfriendly position, especially in the case of England, aided greatly in prolonging the war, as the English were ready to buy all the cotton to be had, and thus arms and munitions of war were conveyed by every opportunity in exchange for that all-important staple of the South.

Another event of 1861 was the retirement of General Winfield Scott from the command of the United States armies, and the appointment of Gen. George B. McClellan in his place.

The opening of the year 1862 found us with an army of more than 500,000 men, mostly volunteers, and Gen. McClellan in command of the army of the Potomac. His design was to march on Richmond, and when he had advanced within six miles of that coveted city, at a place called Fair Oaks, an indecisive battle occurred, in which some eighty thousand men took part. Later in

the spring, McClellan moved his army to the James River, and in July occurred the memorable "seven days battles," and in the last one, at Malvern Hills, the Confederates were defeated. These were among the severest battles of the war, and the armies suffered untold losses in killed and wounded. Besides, it was in the heat of summer, and the exhaustion that followed these engagements, added to the numbers of sick, and thus greatly aggravated the troubles. In the seven days battles, about 100,000 men were engaged on either side, and each lost near 15,000. The other less important engagements occurring during that summer were those of Cedar Mountain, Bull Run, and South Mountain, and on September 17th, the battle of Antietam, when 75,000 on each side took part, and the Union loss was estimated at 14,000. In that famous fight our troops were victorious, and Gen. Lee, the southern leader, was driven across the Potomac, and escaped with his army. But McClellan failed to pursue them, or the victory would have been complete, and as this omission was severely censured, he was removed from the command, his place being filled by Gen. Burnside.

The new commander entered upon his duties in November, and the next month crossed the Rappahannock and attacked Fredericksburg, but after capturing it, was forced to retreat with very heavy losses. Thus the year drew towards its close without much advance in the eastern section of the country. In the western portion, however, the army had done some severe fighting, and had gained several of the enemy's strongholds, and several important naval victories had been won.

In January, 1862, Gen. Grant was sent with 40,000 men to open the Cumberland and Tennessee Rivers. Leaving Cairo, Illinois, he set out to attack Forts Henry and Donelson, which guarded their entrances. The expedition consisted of seven gunboats, besides several steamboats, on which the 15,000 troops were embarked, the fleet being commanded by Commodore Foote of the navy. Proceeding up the Ohio and Tennessee Rivers to within about four miles of Fort Henry, the troops

were there landed, and proceeded to take possession of the military road connecting Fort Henry with Fort Donelson. Then began a deadly fire from the gunboats, which was returned by the fort, the battle lasting several hours, after which Fort Henry surrendered, and its forces were withdrawn to Fort Donelson, on the Cumberland. A few days later, and that stronghold also surrendered to Gen. Grant, and the enemy abandoned Nashville after destroying two of their gunboats in course of construction, and two fine bridges over the Cumberland.

Having thus been driven from Fort Donelson, the Confederate troops took refuge on Island No. 10, in the Mississippi River, a strongly fortified place, but the Union forces soon captured that also. On April 6th, 1862, occurred the battle of Pittsburg Landing, a severe and bloody one, between the Union forces under Grant, and the Confederates under Beauregard and Johnston. More than 100,000 were engaged in this fight, and about 20,000 were either killed or wounded without giving to either any important advantages.

But the greatest military event of the year was the capture of New Orleans by the combined forces of the navy under Admiral Farragut, and of the army under Gen. Butler. Below the city were two strong forts—Fort Saint Philip and Fort Jackson—and these must be taken or silenced before the city could be reached. Farragut, therefore, approached and opened fire upon the first one, and a terrific battle ensued. After this had continued for some time, Farragut determined to attempt the passage of the two forts, a most hazardous undertaking truly, but it was accomplished nevertheless, and that under the most awful fire ever directed against a fleet. Besides this he destroyed the enemy's gunboats, silenced two heavy batteries, and then, in spite of the barriers placed before him, burning rafts, etc., the battle-marked ships, mortar boats, and steam transports ascended the river, and at noon on the 25th of April, the city was before them and entirely at their mercy. A few days later, Gen. Butler with his land forces en-

CATAVINT CHARGE.

tered New Orleans and demanded its surrender, which was at once complied with. Thus was the control of the Mississippi River secured to the government, and the fleet proceeded farther up towards Vicksburg.

Another very important transaction, perhaps the greatest one of the century, was the proclamation of the President, declaring that "on the first day of January, 1863, all persons held as slaves within any state or designated part of a state, the people whereof shall then be in rebellion against the United States, shall be then, thenceforth, and forever free ; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any effort they may make for their actual freedom."

President Lincoln in his message to Congress explained this act in these words: "In giving freedom to the slave, we assure freedom to the free, honorable alike in what we give and what we preserve. We shall nobly save or manly lose the last best hope of earth . . . The way is plain, peaceable, glorious, just—a way which, if followed, the work will forever applaud, and God must forever bless."

Again, on New Year's day, 1863, the President issued a new proclamation to confirm the previous one, and thus there was made an end of that long existing evil, the sin of slavery, which had borne such bitter fruits for the whole nation.

Another noteworthy event of the year 1862 was the remarkable battle between the Confederate ram "Merrimac," and the "Monitor," in Hampton Roads. The "Merrimac" was one of the vessels that had been scuttled by the Union officers at the time of their abandonment of the Norfolk Navy Yard, and it had been raised by the Confederates, cut down to the hull, and then coated with heavy railroad iron, being so constructed as to resemble the slanting roof of a house. It was also furnished with an iron prow which projected from the bow end, and was capable of great execution, the for-

midable vessel being armed with 100-pound Armstrong guns. Accompanied by two other vessels, the "Jamestown" and the "Yorktown," this strange-looking boat left Norfolk, and proceeded to attack the Union squadron in Hampton Roads. There were two wooden sailing vessels, the "Cumberland" and "Congress," lying near Newport News, and the former of them was at once destroyed by the crushing force of the prow, which struck the vessel twice. At the same time the monster guns were fired into both ships, carrying awful destruction amongst the crews. Only forty-five minutes were required to end the battle, so far as the "Cumberland" was concerned, as she went down carrying all on board, her colors flying, and her brave commander ordering one more broadside even while she was sinking.

Having thus made an end of one ship, the "Merrimac" turned her attention to the "Congress," and poured one broadside after another into her until she was set on fire and burned to the water's edge. A third ship, the "Minnesota," was the next to receive attention, it being aground, and therefore completely at the mercy of the enemy, which, while dealing death and destruction everywhere around, was impregnable herself. The heavy balls from the Union ships, and batteries on shore, struck and glanced off harmlessly, making the damage all on one side, and, to all appearances, the third ship was soon to follow the fate of its companions, when night came on, and the "Merrimac," with its consorts, retired to a little distance to await the morrow.

By a most providential arrangement, the night had scarcely closed in when a strange little boat, looking like a raft with an inverted cheese box upon it, came steaming along, convoyed by two small steam-tugs. It was the "Monitor," an invention of one Captain Ericsson, and never was an arrival more opportune. Next morning, when the "Merrimac" returned to complete the work of destroying the Union fleet, this strange-looking little thing steamed out to meet her and opened fire, which the other returned. The fight between these two strange iron-clad boats lasted some two or three hours,

and ended in the "Monitor" sending a shell through one of the enemy's portholes, which did a serious work among the crew and was the means of driving away the "Merrimac," which returned to Norfolk and gave up the contest. This affair had a most important bearing upon the question of construction of vessels of war, and led to the universal adoption of iron-clads in place of wooden ones.

The capture of Roanoke Island and other important points on the North Carolina coast, also the Atlantic seaports of Florida by naval and military co-operation were also accomplished during the same year.

The year 1863 opened with very discouraging prospects; the cost of maintaining the war had become enormous, for high bounties had to be paid in order to secure enlistments, and prices of all kinds of provisions and clothing were more than doubled. In order to secure further reinforcements, the Government was obliged to resort to drafting, a measure that was very unpopular, although necessary. Men were not as enthusiastic as in the beginning of the war, nor so ready to offer themselves as targets for the enemy. A general apathy was apparent, and things looked dark and gloomy enough.

It was just while this state of feeling was prevailing that Gen. Lee determined to invade the Northern States, and accordingly marched down the Shenandoah Valley, crossed the Potomac, and entered Pennsylvania. When the invaders had reached a point near Gettysburg, the Union forces under Gen. Meade met them and gave battle. Eighty thousand men on each side were in that bloody fight, which lasted for three entire days, beginning July 1st, but it finally ended in the total defeat of the Southern army, Lee and his remaining forces being driven back across the Potomac, never again to enter upon Union soil.

At the same time that this important victory occurred, Gen. Grant, in the south-west, was negotiating for the surrender of Vicksburg, and almost at the same time the glorious news of victory was telegraphed from both

these points, Vicksburg having surrendered on the 4th of July after a siege of forty-seven days. These decisive gains must be considered as the turning points in the history of the war. The discouraged troops became inspired with fresh strength, and light began to break through the previous gloom, especially as the news of other victories followed quickly after. The last barriers were soon removed from the Mississippi below Vicksburg, and thus the river was opened to Union vessels.

In November, Gen. Rosecrans, commanding the Union forces in Tennessee, met with a defeat at Chickamauga, and soon after, Gen. Grant coming to his relief, with Gen. Thomas and Gen. Hooker, the battle of Lookout Mountain was fought, in which the Confederates were totally defeated and driven from the State. In the meantime the navy was busy on the coast, still operating against Charleston, ending in the capture of Fort Wagner in September.

In reviewing the events of that year, there were important gains to be recorded, if there were likewise some repulses ; peace seemed to be less distant, and yet there was much to be done before it could be expected, but the prospects were far more favorable than they had seemed a year before.

THE PONTON BRIDGE.

CHAPTER XXX.

Events of 1864—Red River Expedition—General Grant made Commander-in-chief—New Plans—Sherman's March—Surrender of Columbia and of Charleston—Grant's operations in Virginia—Naval exploits—Destruction of the "Alabama"—Fall of Fort Fisher—Closing in around Richmond—Gen. Lee's Surrender—Abraham Lincoln re-elected—Joyful news of Peace—Assassination of the President—The Nation in mourning—Capture of the Conspirators—Andrew Johnson inaugurated—His Administration—Difficulties—Impeachment—14th Amendment—The Atlantic Cable—Completion of Pacific Railroad—Gen. Grant elected President—15th Amendment passed—The war debt—Reconstruction—Settlement of the Alabama Claims—Grant re-elected—Financial troubles—Fire at Chicago—Death of the Vice-President—The Centennial year—International Exposition—Description of Principal Buildings—Opening Ceremonies—Nations represented in the Exposition—General view of special objects of interest—Programme of intended celebration of Centennial 4th of July—General Summary and Retrospect.

THE year 1864 witnessed a number of operations in various quarters, which brought no decided gains to either side. In the Southwest an expedition was made up the Red River, intending to capture Shreveport, Admiral Porter commanding the naval force, and Gen. Banks the military. Had they set out a few weeks earlier the undertaking might have succeeded, but owing to the delay of Gen. Banks' army, the river began falling before the gun-boats had proceeded far, and only by a masterly effort, conducted by Lieutenant-Colonel Joseph Bailey, were the boats saved from falling into the hands of the enemy. The vessels had reached the falls near Alexandria, but the low state of the water made it impossible to pass them, when Col. Bailey obtained leave to build a dam across the river, of timber, sunken coal-

boats, etc., and by this means the water was deepened sufficiently to enable the boats to pass over, which, after some delay and much hard work, was successfully accomplished, the fleet being thus transferred to the navigable waters below the falls.

But the expedition itself was alike disastrous to the reputation of the military leader, and the government officials who had favored it with hope of obtaining cotton for speculation.

In Virginia, Gen. Kilpatrick led his cavalry at one time within three miles of Richmond, and Gen. Seymour re-occupied Jacksonville, Florida. In the West, the Confederate General Forrest captured Fort Pillow (April 12th), and massacred three hundred colored soldiers there in cold blood.

On March 17th, General Grant was appointed Commander-in-chief, with the title of Lieutenant-General, and at once began to plan a general programme in which all sections of the country were embraced. Two grand movements were organized : the one under Gen. Meade, directed against Richmond, and the other under Gen. W. T. Sherman, who was to march entirely across the country, through the Southern States, until he reached the sea, then northward until he could form a junction with the army surrounding Richmond. It was a grand scheme, involving bitter hardships for the army, but Gen. Sherman was just the man for such a command, and after a memorable campaign in Tennessee, he took up his line of march through Georgia, taking the important town of Atlanta, and reaching Savannah before Christmas. The city was evacuated without any fighting, the Confederate forces had retreated, and the Union army entered in triumph on the 22d of December. Gen. Sherman then wrote to President Lincoln: "I beg to present to you as a Christmas gift, the city of Savannah, with one hundred and fifty heavy guns and plenty of ammunition, also twenty-five thousand bales of cotton."

Thus was accomplished a wonderful feat, for the men had marched three hundred miles, depending upon forage alone. Sherman was now able to communicate

with the forces at Hilton Head under General Foster, and with Admiral Dahlgren, commanding the naval fleet on the coast. Resting his army in Savannah until the 15th of January, 1865, Gen. Sherman sent a detachment to Pocotaligo, in transports, but the main army did not move until February 1st, owing to the rainy weather.

When Sherman began his difficult march northward it was through many natural obstacles ; floods, swamps, marshes, and thickets all combined to block his way, but he pressed on, and soon the fate of Charleston became fixed. The Union columns were all directed towards Columbia, the capital of South Carolina, and on the 17th of February, it was surrendered to Colonel Stone, who took command. Before the surrender, however, Gen. Wade Hampton had ordered the destruction of a large quantity of cotton, and as a high wind was prevailing at the time, there ensued a very destructive conflagration, which destroyed a large part of the city.

The fall of Columbia involved that of Charleston and its harbor defenses, and foreseeing this, the Confederate General Hardee set fire to the cotton and stores belonging to the Confederacy, and then marched out to join Beauregard, hoping to concentrate forces as for a final effort. As in the other case, the fire extended, and caused a fearful destruction of property, ending in an explosion of gunpowder which had been stored in a railroad depot, and by which two hundred persons were killed.

On the 18th, Charleston was surrendered by its Mayor to Gen. Gillmore, and this included all the harbor forts, a colored regiment being the first to enter the city with the national colors.

While all this was transpiring in this direction, Grant's army had been operating in Virginia. During May and June, had occurred the battles of the Wilderness, of Spottsylvania, and of Cold Harbor, in all of which the Union armies were unsuccessful, sustaining heavy losses. In July, the Confederate General Early made a raid into Pennsylvania, and burned the town of Chambersburg.

He was pursued by Gen. Sheridan, who heard of it at Winchester, and rode twenty miles in hot haste, to meet him. Sheridan's men were retreating when he reached the spot, but he turned them back, and changed the defeat into a victory.

The navy had also been busy with several notable expeditions, one of which was successful in destroying the powerful ram, "Tennessee," which had already done great harm amongst our wooden ships. On the 5th of August it was destroyed by Admiral Farragut, in Mobile Bay, and on October 27th, another equally formidable ram—the "Albemarle"—was destroyed by a torpedo from a boat commanded by Lieutenant Cushing, who narrowly escaped with his own life, after discharging this perilous duty.

At this time the seas were swarming with Southern privateers, fitted out in England, and often manned by English sailors. These preyed on American commerce everywhere, and had already destroyed millions of property. One of the most noted of these was the "Alabama," commanded by Raphael Semmes, and the amount destroyed by it was very great, yet it had always eluded its pursuers who had been on its track for a long time. But on the 19th of June, 1864, the pirate ship steamed out of the harbor of Cherbourg, and was attacked by the United States gun-boat "Kearsarge," under Captain Winslow. The vessels were about equal in point of size and equipments, but a British steamer, the "Deerhound," kept near by in order to aid the pirate in case of need. The conflict lasted about an hour and was ended by the sinking of the "Alabama," whose captain and crew were picked up by the "Deerhound" and conveyed to a place of safety.

In the month of December an expedition was sent against Fort Fisher, the chief defense of Wilmington, N. C. It was a very formidable fleet of seventy-three ships, carrying 656 guns, aided by a land force under Gen. Butler. The fleet was commanded by one of our ablest naval officers, Admiral Porter; but after a two days' bombardment, Gen. Butler ordered the expedition

MARCHING ON SAVANNAH.

Wm. C. Miller
1871-1872

to return, himself hastening to Washington to explain the reason, and prove the impossibility of the undertaking. Meanwhile, Admiral Porter; who had more confidence in the plan, gave his testimony, which led to the appointment of Gen. Terry as commander of another land force, and the starting of a new expedition, which left Fortress Monroe Jan. 6th, 1865, and arrived off Wilmington on the 12th. A severe fight of three days followed, in which the fort was assaulted both from the ships and on the land side, and finally surrendered with its garrison of about 2,000 men and 169 guns. The news of the capture of Fort Fisher reached Washington while Gen. Butler was still stating his case, and ended the matter, of course.

On the 23d of March, Gen. Sherman's army reached Goldsboro, N. C., and joined Schofield and his men, and on the 29th the movement of Grant's army began. Sherman's march had discovered to him the weakness and utter exhaustion of the Southern armies, and nothing remained but for the Union Generals to carry out their programme, and close in around the Confederate capital. Placing Gen. Sheridan in command of the cavalry, with orders to get upon the enemy's rear, that brave officer turned the flank of Lee's army, and on April 1st, 1865, occurred the battle of Five Forks, in which five thousand prisoners were taken.

Surrounded on all sides, the case had become desperate, and Gen. Lee saw that further resistance was impossible. He, therefore, telegraphed to Jefferson Davis: "My lines are broken in three places. Richmond must be evacuated this evening." Davis was in church on Sunday when this news reached him, and he instantly left the building, and gave orders for the removal of the Government papers and other valuables. All Richmond was in an uproar, for everyone was anxious to secure their goods and chattels and to leave the place before the conquerors should enter. Fabulous sums were offered for wagons to convey goods, and according to previous custom, the city was fired in several places, in order to destroy the tobacco, while bridges and shipping were also burned.

On April 3d, the Union troops entered the Confederate capital, and took possession, while General Lee was trying to escape with his exhausted army; Sheridan pursued him, but further flight was impossible on account of the weariness and exhaustion of the soldiers, who dropped by the way. On the 7th, Gen. Grant addressed a note to Gen. Lee, asking him to surrender, and thus prevent the further useless shedding of blood.

The pursuit continued two days longer, and then the white flag was raised, requesting a cessation of hostilities. Thus, on the 9th of April, was ended the four years' war of the rebellion, which had cost the nation more than half a million lives, and more than two billion seven hundred million dollars (\$2,749,491,745). The formal surrender took place at Appomattox C. H., April 9th, and the surrender of the other Generals followed soon after. Jefferson Davis escaped to the South and was finally captured in Georgia, disguised in woman's clothing. He was sent to Fortress Monroe, where he was imprisoned for a long time to await trial for treason, but was at length released on bail, and finally the prosecution was abandoned.

During the year 1864 another Presidential campaign took place. The Republican party, having implicit confidence in the ability and integrity of President Lincoln, re-nominated him, with Andrew Johnson, of Tennessee, as their candidate for Vice-President. The Democrats chose as their candidate Gen. Geo. B. McClellan, but the election in November gave Lincoln a large majority. He was, therefore, inaugurated for a second time on March 4th, 1865, about a month before peace was concluded.

On the 24th of March he went to City Point, and remained in communication with Gen. Grant during all the remaining days of that eventful period until Gen. Lee's surrender. Returning to Washington, and anxious at once to begin the work of reconciliation, he made an address to the people there, recommending measures which looked to the speedy reconstruction of the Southern States, and the removal of all restrictions on trade and commerce.

In the providence of God, his administration had been marked by sore national troubles, and now that the last battles had been fought, he desired to do his utmost towards binding up the nation's wounds, and to establish a lasting peace. These are the words of his second inaugural address: "With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in to bind up the nation's wounds, to care for him who shall have borne the battle, and for his widow and his orphans, to do all which may achieve and cherish a just and a lasting peace among ourselves, and with all nations."

The joy of the whole nation at the news of peace was indeed great, and although there were many sad homes out of which the light had gone forever—vacant places by many a fireside; yet the tidings of peace came like a benediction to all alike, and for the time the country was given up to every demonstration of rejoicing. On the 14th of April, the anniversary of Sumter's surrender, the old flag was restored to its place there.

On the evening of that day, President Lincoln and wife went to Ford's Theatre, and, while there, during the progress of the play, Mr. Lincoln was shot by a man named John Wilkes Booth, who had entered the private box unperceived, and going behind the President, took deadly aim, the ball entering his brain. As soon as he had committed the dreadful act the murderer jumped upon the stage, and brandishing a dagger before the astonished audience, exclaimed aloud, "*Sic semper tyrannis!*" then vanished through the stage door, and disappeared through a back passage leading to the street. There he entered a carriage in waiting and drove rapidly away.

The wounded man was borne to a house opposite, where every attention was rendered, but without avail; he expired at about seven o'clock next morning without recovering his consciousness. A deep-laid conspiracy was then discovered, intended for the destruction of the leading men of the Government, Gen. Grant included.

On the same night, another of the band attempted the life of Secretary Seward, who was confined to his bed by sickness, and inflicted a serious wound. Gen. Grant was publicly announced as expecting to be present at the play, and had accepted the President's invitation to accompany him, when some providential occurrence induced him to change his plans, and he left Washington by the evening train for his home at Burlington, New Jersey. When on the ferry-boat crossing the river to Camden, the news of the occurrence reached him, and he immediately turned back, but arrived at Washington too late to see his friend alive.

Thus was the nation's joy turned suddenly into the deepest grief, and everywhere the most intense excitement prevailed as the terrible news spread throughout the country. Scouts were sent in pursuit of the assassin and his fellow-conspirators, and in a few days Booth was captured in a barn, within which he had secreted himself, near Port Tobacco, Md. He fought desperately rather than surrender, and finally shot himself to avoid being taken into custody. Those with him gave themselves up, and were tried, together with several others, before a military court. The trial showed the existence of a damnable plot to destroy some of the most valuable and prominent men of the nation, and being found guilty, four of them—Harold, Payne, Atzeroth, and Mrs. Surratt—were hung on the 7th of July. Others were imprisoned, either for life or for a term of years.

The funeral of the lamented Lincoln took place at Springfield, Illinois, and as it passed through the country on its way thither, everywhere were displayed emblems of sorrow and demonstrations of grief; churches were draped, and public buildings, depots, and private houses were marked with badges of mourning, for never, since the days of Washington, had the nation lost a leader so well beloved and so deservedly esteemed.

The same day, after the death of the President, according to the provisions of the Constitution of the United States, Andrew Johnson, the Vice-President, took the oath of office, and became head of the Govern-

GRANT MARCHING ON RICHMOND.

ment. Under the sad circumstances, the ceremony took place in private, on the morning of the 15th of April, at the hotel where Mr. Johnson was residing.

During the first year of Andrew Johnson's administration there were no changes in the cabinet; the same officers who had labored under the wise Lincoln were retained in office. But very soon it became evident that great differences existed between the views held by the Executive and other prominent members of the Government. These differences related to the questions of how the lately rebellious States should return to their former places in the Union, and so high did the quarrel rise that the President was at length impeached by the House of Representatives for "high crimes and misdemeanors."

The novel spectacle was then presented of a President of the United States being tried as a criminal; the trial ended, however, in his acquittal.

Amongst the noteworthy events of this administration were the ratification of the 14th Amendment to the Constitution, which removed all distinctions of color, and admitted the colored man to most of the rights and privileges of the white man.

The successful laying of the Atlantic Cable, in 1866, was an event of our civil history in which the whole world was interested, and marks, in a wonderful manner, our advance and progress in scientific undertakings.

In the year 1869 was also completed that grand triumph of civil engineering—the Pacific Railroad, eighteen hundred miles long, and connecting New York with San Francisco, the time between the Atlantic and Pacific coasts being thus reduced to a single week.

At the Presidential election, November, 1868, Gen. Ulysses S. Grant and Schuyler Colfax were elected, by a large majority, the Democratic candidates being Horatio Seymour of New York, and Frank P. Blair of Missouri.

On the 29th of Feb., 1869, the 15th Amendment to the Constitution passed both Houses of Congress, and by its provisions colored men were admitted to the right

of suffrage. All other rights having been granted by the previous amendment, they were now absolutely raised to the level of white citizens, and can hold office themselves as well as vote for officers to rule over them. This new law was afterwards ratified by the consent of a majority of the State Governments.

One of the first things to be attended to by the new President was to arrange or propose a plan for the payment of the great national debt, and by the assistance of Mr. Boutwell, the able Secretary of the Treasury, a very sensible and practical one was adopted, which has succeeded so well that during the seven years of Grant's administration, nearly one-quarter of the grand total has been paid, amounting to about \$800,000,000, and this without becoming very burdensome to the people.

During the year 1870, the Southern States having complied with the prescribed terms, were re-admitted into the Union, Virginia, Mississippi, and Texas being the last to send representatives to the National Congress.

The most important matters transpiring in the year 1871, were the diplomatic correspondence between Great Britain and the United States in relation to certain vexed questions concerning the damages inflicted on our commerce by the various privateers, and especially by the notorious "Alabama," and also disputed boundary lines which were not clearly defined. Several previous attempts had been made to adjust these matters, but without success, and now it was agreed to submit all cases in dispute to a joint commission, who should decide them finally.

The treaty thus entered into between the two nations was called the Treaty of Washington, and was signed May 4th, and the first meeting of the said commission was held at Geneva, Switzerland, in December, 1871. The final decision was not given until September 21st, in the following year, when the Emperor of Germany, having accepted the office of arbitrator, decided the questions in favor of the United States, both in regard to the boundary, and also awarding fifteen millions of

dollars as indemnity in the "Alabama" case. This sum was afterwards paid without any discussion by the English Government.

On March 4th, 1873, President Grant, having been elected to a second term, was again inaugurated, with Henry Wilson of Massachusetts as Vice-President.

This year was marked by a great financial panic which extended over the whole country, beginning with the failure of Jay Cooke & Co. of the First National Bank, a firm which had long enjoyed the entire confidence of the Government, although the latter was in no way involved in its losses. This grand failure caused great distress amongst all classes, and many of the leading bankers, mercantile firms, and manufactories were obliged to close their doors. A season of great depression followed, which still, in some degree, continues, notwithstanding the presence of many other reliable evidences of prosperity.

At various periods during several years the country was visited by very serious conflagrations; the largest and most destructive was that which occurred in Chicago, October 8th, 1871, in which \$192,000,000 worth of property was destroyed. Great as was the devastation by this calamity, preparations were at once begun for rebuilding the city, and in a few months there were few remaining traces of the disaster.

On November 22d, 1875, the Vice-President, Henry Wilson, died suddenly at Washington, aged 63.

The opening of the Centennial year, 1876, was marked with every popular demonstration of joy. The ringing of bells, and general illuminations took place all over the United States. At Philadelphia a new bell was placed in the steeple of Independence Hall, and rang out a midnight peal to usher in the New Year.

But the grandest plan for commemorating the Centennial year of our independence was that of an International Exhibition to be held at Philadelphia, the scene of the signing of the Declaration of Independence, one hundred years ago. All nations were accordingly invited to take part in this Exhibition, and Fairmount Park, one

of the finest public parks in the world, was selected as the site of the buildings. This choice having been approved by Act of Congress bearing date of March 3d. 1871, the authorities of the city, acting through the Park Commission, on the 4th of July, 1873, transferred to the "Centennial Commission" four hundred and fifty acres of land in the said park for the various purposes of the Exhibition.

Fairmount Park is situated in the north-western section of Philadelphia and contains 3,000 acres, embracing lands on both sides of the Schuylkill River, with great variety of natural picturesque scenery, beautiful hills, green slopes and valleys diversifying the landscape. The portion selected for the buildings is a fine plateau about 120 feet above the level of the river, and the buildings erected thereon cover a total area of seventy-five acres, or twenty-five more than were so covered by any previous International Exhibition. The whole is enclosed by a palisade fence 16,000 feet long, and within this enclosure one hundred and ninety buildings have been erected, the most important of which were entirely finished before the opening of the Exhibition. These buildings may be classified thus :

First : Exhibition buildings proper, including the Main Building, Memorial Hall, Machinery Hall, Horticultural Hall, Agricultural Hall, the United States Government Building, and the Women's Pavillion, with their annexes. *Second* : Subsidiary Exhibition Buildings. *Third* : Buildings erected by Foreign Governments either as head-quarters for their Commissioners, or for exhibition purposes. *Fourth* : Buildings erected by States, to be used as head-quarters for State authorities, etc. *Fifth* : Buildings erected by States for exhibition purposes. *Sixth* : Buildings erected for the display of special industries. *Seventh* : Buildings erected by individuals for exhibition purposes. *Eighth* : Offices of the Centennial Commission and buildings erected for the uses of the Centennial Guard and Fire Patrol. *Ninth* : Buildings erected for purposes of traffic. *Tenth* : Ornamental buildings, fountains, monuments, etc. *Eleventh* : Minor structures.

The Main Exhibition Building covers an area of nearly 21½ acres, and in it are exhibited a wonderful variety of manufactured articles, as well as specimens of natural productions from all the nations contributing to the Exhibition, namely : The United States, Great Britain and her colonies, including Canada, Australia, and India ; France and colonies ; Germany, Austria, and Hungary ; Russia, Belgium, Spain and colonies ; Switzerland, Turkey, The Netherlands and colonies ; Japan, China, Egypt, Sweden and Norway, Denmark, Portugal, Tunis, Sandwich Islands, Peru, Orange Free State of South Africa, Brazil, Mexico, Chili, Argentine Republic, and Italy, Twenty-eight governments and thirty-one distinct nations are thus represented in this great Exhibition, and their offerings embrace a vast variety, being distributed in proper places throughout the different buildings.

The next largest building is Machinery Hall—dimensions of this with its annex are 1,610x570 feet. In this are shown all kinds of machinery, tools, models, etc., a large tank being placed at one end for the exhibition of hydraulic machines.

Memorial Hall is a grand structure, devoted to the exhibition of works of art—painting, sculpture, engravings, etc., and was erected by the State of Pennsylvania at a cost of \$1,500,000, to be a permanent memorial of the Exhibition, and Gallery of Fine Arts.

Horticultural Hall is another permanent building, covering one and a half acres, and is filled with the choicest and rarest specimens of the flora of the world, trees, vines, fruit, etc. The surrounding grounds are also planted with ornamental shrubbery, hardy bulbs, etc., and are ornamented with vases, rustic seats, and other graceful designs, the effect being very fine.

Agricultural Hall, another large building, contains many interesting objects connected with farm employments, labor-saving implements, improved cultivators, and other things of kindred interest.

The Government Building has numerous exhibits brought from the Patent Office and Smithsonian Institute, specimens of minerals, Indian relics, trophies, etc., etc.

The Women's Pavilion covers an area of 30,000 square feet, and is a very ornamental wooden building. It contains many objects of merit in many departments of art, all prepared and contributed by women as their own work. A careful inspection shows that they are fully up to the standard, and great praise is due to the enterprising lady who has accomplished such surprising results, and shown us how many industries may be open to women.

Space forbids us to particularize by describing the various buildings. All we can do is to mention briefly a few of the most noteworthy amongst the smaller ones. The British Building, erected as a residence for the Commissioners from England and her colonies, is a very striking one, being in the Elizabethan style of architecture, with casement windows and other fittings and furniture belonging to that time.

The Japanese Building, near the former, is one of the most interesting on the ground, being a model of a Japanese country residence of the higher class, and is furnished in a characteristic manner. In the windows, paper takes the place of glass, and around the doorways are seen rare carvings, whilst the interior walls are hung with curtains of a vegetable woven fibre somewhat resembling figured lace. A Japanese Bazaar, or "Chop-house," as they term it, with a little enclosed garden attached, has been prepared near by, and here will be carried on a traffic in their wares. The trees and rocks adorning this miniature garden were all brought with them from Japan.

Some of the State buildings are very handsome, and also others erected by individual industries, or trades. There is a Swedish school-house, a Vienna bakery, a Tunisian coffee-house, several French buildings, intended for the manufacture and display of special branches of industry and arts—a Canadian log-house, and numerous cafés and restaurants distributed throughout the grounds.

Among the most ornamental and beautiful objects to be seen is the Catholic Centennial Fountain, erected at

a cost of \$50,000 by the various Total Abstinence Societies of the R. C. Church. It has a large circular basin 40 feet in diameter, with a huge mass of rock-work in the centre, upon the top of which stands a colossal statue of Moses smiting the rock. It is a grand and appropriate conception, and very admirably executed, and the water is seen gushing forth in a copious stream, as if responding to his touch. Stretching from the basin are four arms, in the form of a maltese cross, and each of these terminate in a circular platform, upon which stands a drinking fountain 12 feet high, surmounted by a colossal statue nine feet high. The four statues represent Commodore John Barry, the "Father of the American Navy"; Archbishop Carroll, the patriot priest of the Revolution; Charles Carroll of Carrollton, the Catholic signer of the Declaration of Independence; and Father Matthew, the "Apostle of Temperance."

We have given but a glance at the most prominent features of the Exhibition, which, after long and patient labor on the part of the very efficient gentlemen of the Centennial Commission, was in readiness for the grand opening ceremonies on the appointed day. The 10th of May witnessed a scene, the like of which was never known before in our country. Not only Philadelphia, but every town and city within a radius of 100 miles, was splendid with flags of all nations, nearly every building, whether public or private, being decorated in some degree with bunting. Throngs of people began to surround the gates from an early hour in the day, while trains came from every direction bringing more. By 11 o'clock A. M. it is estimated there were 300,000 people within the grounds. The official programme for the inaugural ceremonies was published in the daily papers, and was as follows:

THE U. S. CENTENNIAL COMMISSION,	}
INTERNATIONAL EXHIBITION,	
PHILADELPHIA, April 20, 1876.	

To the President of the United States:

SIR:—In obedience to the law constituting this organization I have the honor to submit, in behalf of the

Commission, a schedule of the ceremonies to be observed at the opening of the International Exhibition of 1876, on the 10th proximo.

Formal invitations to attend have been sent to the President of the United States, the Cabinet, the Supreme Court, the Diplomatic Corps, the Congress, the Government Centennial Board, the Governors of the States and Territories and their staffs, the Legislature of Pennsylvania, the city authorities of Philadelphia, the chief officers of the army and navy, the Women's National Centennial Committee, the Foreign Commissioners to the Exhibition, the Centennial Board of Finance, and others in official position, and officials connected with the work of the Exhibition.

On the morning of May 10th, the grounds and buildings in general will be open to the public at 9 A. M. The Memorial Hall or Art Gallery, the Main Building and Machinery Hall, will be reserved to the invited guests and the exhibitors until the close of the ceremonies about noon, when the restrictions will be removed.

The services will take place in the open air upon the south terrace of Memorial Hall, fronting the Main Building, in full view of the general public. Invited guests, unless otherwise notified to the contrary, will enter the Main Building by way of the carriage concourse at the east end of that building, or by the north, middle, or western doors thereof. These enclosures will be open to them at 9 A. M.

The music will be under the direction of Theodore Thomas, assisted by Dudley Buck, with an orchestra of one hundred and fifty, and a chorus of eight hundred.

It is expected that the guests will be seated in the amphitheatre, prepared on the south front of Memorial Hall, by 10:15 A. M. The orchestra will play the national airs of all countries represented at the Exhibition.

The President of the United States will be escorted to the grounds by Governor Hartranft, of Pennsylvania, and a division or more of troops from Pennsylvania and New Jersey, arriving about 10:30 A. M.

PROGRAMME.

1. Centennial Inauguration March, by Richard Wagner, Germany.

2. Prayer, by Right Rev. Bishop Simpson, of Philadelphia.

3. Hymn, by John G. Whittier; music by John K. Paine, of Massachusetts; orchestral and organ accompaniment.

4. Cantata; the words by Sidney Lanier, of Georgia, music by Dudley Buck, of Connecticut; orchestra and organ accompaniment.

5. Presentation of the Exhibition to the President by the Centennial Commission.

6. Address by the President of the United States.

The declaration that the Exhibition is open will be followed by the raising of flags, salutes of artillery, the ringing of chimes, and Handel's "Hallelujah" chorus, with organ and orchestra accompaniment.

The Foreign Commissioners will pass into the Main Building, and take places opposite their respective sections. The President of the United States and the guests of the day will pass through the Main Building.

The Foreign Commissioners, upon the President's passing them, will cross to Machinery Hall. There, at the proper moment, the President will set in motion the great engine and all the machinery connected therewith.

A brief reception by the President of the United States in the Judges' Pavilion will close the formal observances of the day.

The Centennial Commission is happy to report that the buildings and grounds, so far as the Commission and Board of Finance are directly responsible, will be quite completely ready on the appointed day. The exhibits from foreign countries are extensive and brilliant beyond our anticipations. It would be too much to expect that every exhibitor should have his space in perfect order at the opening, though the most strenuous efforts to that end will be continually made; but the Commission ventures to think that no previous exhibition

was so far advanced at the same relative day. The Commission begs leave to ask the President to communicate this report to Congress soon, and most respectfully invites both houses to attend the opening ceremonies of the International Exhibition held in the commemoration of the one hundredth anniversary of the declaration of our national independence.

I have the honor to be, very respectfully, your obedient servant,

(Signed),

JOSEPH R. HAWLEY,

President Centennial Commission.

Notwithstanding the great number of people present, the above programme was carried out to the letter, except in regard to the President's reception at the close, which for reasons, was dispensed with. The best order prevailed, and when the signal was given by the unfurling of the flag on the Main Exhibition Building, every other flag was opened to the breeze, the chimes began a joyful peal, and the grand Hallelujah chorus of Handel, performed by 1,000 singers, and full orchestral and organ accompaniment, gave fitting expression to the popular joy.

Among the distinguished guests who occupied seats on the platform erected for the occasion, was the President of the United States and family, the Emperor and Empress of Brazil, members of the Cabinet, and representatives of every branch of our Government, of the army and navy, the diplomatic service, the Judiciary, both Houses of Congress, Foreign Commissioners and representatives, Mayors and officials of other cities, newspaper correspondents, and many other specially invited guests.

After the performance of Wagner's Grand Inaugural March (written for the occasion) by a full orchestra under direction of Theodore Thomas, followed by a prayer by Bishop Simpson, the hymn written by John G. Whittier, and set to music by John K. Paine, Professor of Music in Harvard University, was sung by the great choir with orchestral accompaniment, and the effect

was indescribably grand and solemnizing. The words are as follows :

Our fathers' God ! from out whose hand
The centuries fall like grains of sand,
We meet to-day, united, free,
And loyal to our land and Thee,
To thank Thee for the era done,
And trust Thee for the opening one.

Here where of old, by Thy design,
The fathers spake that word of Thine
Whose echo is the glad refrain
Of rended bolt and falling chain,
To grace our festal time from all
The zones of earth our guests we call.

He with us while the New World greets
The Old World thronging all its streets,
Unveiling all the triumphs won
By art or toil beneath the sun ;
And unto common good ordain
This rivalry of hand and brain.

Thou who hast here in concord furled
The war flags of a gathered world,
Beneath our western skies fulfill
The Orient's mission of good will,
And, freighted with Love's golden fleeces,
Send back the Argonauts of peace.

For art and labor met in truce,
For beauty made the bride of use,
We thank Thee, while withal we crave
The austere virtues strong to save,
The honor proof to place or gold,
The manhood never bought or sold.

Oh ! make Thou us, through centuries long,
In peace secure ; in justice strong ;
Around our gift of freedom draw
The safeguards of Thy righteous law,
And, cast in some diviner mould,
Let the new cycle shame the old.

THE PRESENTATION OF THE BUILDINGS.

The formal presentation of the buildings to the United States Centennial Commission by John Welsh, President of the Centennial Board of Finance, then

took place, Mr. Welsh performing this ceremony in the following remarks :

Mr. President and Gentlemen of the United States Centennial Commission:—In the presence of the Government of the United States, and of the several distinguished bodies by whom we are surrounded, and in behalf of the Centennial Board of Finance, I greet you.

In readiness at the appointed time, I have the honor to announce to you that, under your supervision and in accordance with the plans fixed and established by you, we have erected the buildings belonging to us, and have made all the arrangements devolving on us necessary for the opening of the “International Exhibition.” We hereby now formally appropriate them for their intended occupation ; and we hold ourselves ready to make all further arrangements that may be needed for carrying into full and complete effect all the requirements of the acts of Congress relating to the Exhibition.

For a like purpose, we also appropriate the buildings belonging to the State of Pennsylvania and the city of Philadelphia, erected by us at their bidding, to wit :—Memorial Hall, Machinery Hall, and Horticultural Hall. These and other substantial offerings stand as the evi-
pence of their patriotic co-operation. To the United States of America, through Congress, we are indebted for the aid which crowned our success.

In addition to those to which I have just referred there are other beautiful and convenient edifices which have been erected by the representatives of foreign nations, by State authority, and by individuals, which are also devoted to the purposes of the Exhibition.

Ladies and Gentlemen:—If in the past we have met with disappointments, difficulties, and trials, they have been overcome by a consciousness that no sacrifice can be too great which is made to honor the memories of those who brought our nation into being. This commemoration of the events of 1776 excites our present gratitude. The assemblage here to-day of so many foreign representatives uniting with us in this reverential tribute is our reward.

We congratulate you on the occurrence of this day. Many of the nations have gathered here in peaceful competition. Each may profit by the association. This Exhibition is but a school; the more thoroughly its lessons are learned, the greater will be the gain, and when it shall have closed, if by that study the nations engaged in it shall have learned respect for each other, then it may be hoped that veneration for Him who rules on high will become universal, and the angels' song once more be heard:—

“Glory to God in the highest,
And on earth peace, good will towards men.”

General Hawley then turned to Mr. Welsh and said:—

From the President of the Centennial Board of Finance the President of the United States Centennial Commission accepts the great trust with grateful acknowledgments for the great services of the Centennial Board of Finance.

After the conclusion of this ceremony the third musical event of the programme, the

CANTATA,

written by Sidney Lanier, of Georgia, and set to music by Mr. Dudley Buck, of Connecticut, was performed. Mr. Lanier, in choosing the cantata form by which to illustrate his theme, has shown great taste and judgment. It is a form of musical expression peculiarly adapted to the commemoration of historical anniversaries and like stately occasions. And in contrasting his work with others of a like character, it bears a most favorable comparison. The words are as follows:—

From this hundred-terraced height
Sight more large with nobler light
Ranges down yon towering years:
Humbler smiles and lordlier tears
Shine and fall, shine and fall,
While old voices rise and call
Yonder where the to-and-fro
Weltering of my Long-ago
Moves about the moveless base
Far below my resting-place.

Mayflower, Mayflower, slowly hither flying,
 Trembling Westward o'er yon balking sea,
 Hearts within *Farewell dear England* sighing,
 Winds without *But dear in vain* replying,
 Grey-lipp'd waves about thee shouted, crying
No! It shalt not be!

Jamestown, out of thee—
 Plymouth, thee—thee, Albany—
 Winter cries, *Ye freeze : away!*
 Fever cries, *Ye burn : away!*
 Hunger cries, *Ye starve : away!*
 Vengeance cries, *Your graves shall stay!*

Then old Shapes and Masks of Things,
 Framed like Faiths or clothed like Kings—
 Ghosts of Goods onced fleshed and fair,
 Grown foul Bads in alien air—
 War and his most noisy lords,
 Tongued with lithe and poisoned swords—
 Error, Terror, Rage, and Crime,
 All in a windy night of time
 Cried to me from land and sea,
No! Thou shalt not be!

Hark!

Huguenots whispering *yea* in the dark,
 Puritans answering *yea* in the dark!
Yea, like an arrow shot true to his mark,
 Darts through the tyrannous heart of Denial,
 Patience and Labor, and solemn-souled Trial,
 Foiled, still beginning,
 Soiled, but not sinning,
 Toil, through the stertorious death of the Night,
 Toil, when wild brother-wars new-dark the Light
 Toil and forgive, and kiss o'er and replight.

Now Praise to God's oft-granted grace,
 Now Praise to Man's undaunted face,
 Despite the land, despite the sea,
 I was: I am: and I shall be--
 How long, Good Angel, O how long?
 Sing me from Heaven a man's own song!

"Long as thine Art shall love true love,
 Long as thy Science truth shall know,
 Long as thine Eagle harms no Dove,
 Long as thy law by Law shall grow,
 Long as thy God is God above,
 Thy brother every man below,
 So long, dear Land of all my love,
 Thy name shall shine, thy fame shall glow!"

O music, from this height of time my Word unfold :
In thy large signals all men's hearts Man's Heart behold :
Mid-heaven unroll thy chords as friendly flags unfurled,
And wave the world's best lover's welcome to the world.

It will be seen that the plan of the poem is very simple ; it is the review by Columbia of her hundred years of existence since the Mayflower spread her sails to the winds which bore her from England. But in reading the lines we must remember the musical restrictions under which Mr. Lanier was held. Within the compass of sixty lines he was obliged to make direct reference to the changes, contrasts, and combinations of voices and instruments. None but a musician as well as a poet could have done this, and it was Mr. Lanier's proficiency in both arts which enabled him to attain his present success.

Mr. Buck has done his part in the performance with equal skill, and has given to the words a truly wonderfully fine musical interpretation.

THE PRESENTATION OF THE EXHIBITION

to the President of the United States then took place, Gen. Joseph R. Hawley, the President of the Centennial Commission, performing the ceremony. He addressed President Grant as follows :—

Mr. President—Five years ago the President of the United States declared it fitting that “the completion of the first century of our national existence should be commemorated by an exhibition of the natural resources of the country and their development, and of its progress in those arts which benefit mankind,” and ordered that an exhibition of American and foreign arts, products, and manufactures should be held, under the auspices of the Government of the United States, in the city of Philadelphia, in the year 1876. To put into effect the several laws relating to the Exhibition, the United States Centennial Commission was constituted, composed of two commissioners from each State and Territory, nominated by their respective Governors and appointed by the President. The Congress also crea-

ted our auxiliary and associate corporation, the Centennial Board of Finance, whose unexpectedly heavy burdens have been nobly borne. A remarkable and prolonged disturbance of the finances and industries of the country has greatly magnified the task; but we hope for a favorable judgment of the degree of success attained.

July 4, 1873, this ground was dedicated to its present uses. Twenty-one months ago this Memorial Hall was begun. All the other 189 buildings within the enclosure have been erected within twelve months. All the buildings embraced in the plans of the commission itself are finished. The demands of applicants exceeded the space, and strenuous and continuous efforts have been made to get every exhibit ready in time.

By general consent the Exhibition is appropriately held in the City of Brotherly Love. Yonder, almost within your view, stands the venerated edifice wherein occurred the event this work is designed to commemorate, and the hall in which the first Continental Congress assembled. Within the present limits of this great park were the homes of eminent patriots of that era, where Washington and his associates received generous hospitality and able counsel. You have observed the surpassing beauty of the situation placed at our disposal. In harmony with all this fitness is the liberal support given the enterprise by the State, the city, and the people individually.

In the name of the United States you extended a respectful and cordial invitation to the Governments of other nations to be represented and to participate in this Exhibition. You know the very acceptable terms in which they responded, from even the most distant regions. Their commissioners are here, and you will soon see with what energy and brilliancy they have entered upon this friendly competition in the arts of peace.

It has been the fervent hope of the commission that, during this festival year, the people from all States and sections, of all creeds and churches, all parties and classes, burying all resentments, would come up together to this birthplace of our liberties, to study the evidence

of our resources ; to measure the progress of an hundred years ; and to examine to our profit the wonderful products of other lands ; but especially to join hands in perfect fraternity, and promise the God of our fathers that the new century shall surpass the old in the true glories of civilization. And furthermore, that from the association here of welcome visitors from all nations, there may result not alone great benefits to invention, manufactures, agriculture, trade, and commerce, but also stronger international friendships and more lasting peace.

Thus reporting to you, Mr. President, under the laws of the Government and the usage of similar occasions, in the name of the United States Centennial Commission, I present to your view the International Exhibition of 1876.

THE PRESIDENT PROCLAIMS THE EXHIBITION OPENED.

President Grant thereupon proclaimed the International Exhibition of 1876 open to the world. He spoke as follows:

My Countrymen:—It has been thought appropriate, upon this Centennial occasion, to bring together in Philadelphia, for popular inspection, specimens of our attainments in the industrial and fine arts, and in literature, science, and philosophy, as well as in the great business of agriculture and of commerce.

That we may the more thoroughly appreciate the excellencies and deficiencies of our achievements, and also give emphatic expression to our earnest desire to cultivate the friendship of our fellow members of this great family of nations, the enlightened agricultural, commercial, and manufacturing people of the world have been invited to send hither corresponding specimens of their skill to exhibit on equal terms in friendly competition with our own. To this invitation they have generously responded ; for so doing we render them our hearty thanks.

The beauty and utility of the contributions will this day be submitted to your inspection by the managers of

this Exhibition. We are glad to know that a view of specimens of the skill of all nations will afford to you unalloyed pleasure, as well as yield to you a valuable practical knowledge of so many of the remarkable results of the wonderful skill existing in enlightened communities.

One hundred years ago our country was new and but partially settled. Our necessities have compelled us to chiefly expend our means and times in felling forests, subduing prairies, building dwellings, factories, ships, docks, warehouses, roads, canals, machinery, etc., etc. Most of our schools, churches, libraries, and asylums have been established within an hundred years. Burthened by these great primal works of necessity, which could not be delayed, we yet have done what this Exhibition will show in the direction of rivaling older and more advanced nations in law, medicine, and theology; in science, literature, philosophy, and the fine arts. Whilst proud of what we have done, we regret that we have not done more. Our achievements have been great enough, however, to make it easy for our people to acknowledge superior merit wherever found.

And now, fellow-citizens, I hope a careful examination of what is about to be exhibited to you will not only inspire you with a profound respect for the skill and taste of our friends from other nations, but also satisfy you with the attainments made by our own people during the past one hundred years. I invoke your generous co-operation with the worthy commissioners to secure a brilliant success to this International Exhibition, and to make the stay of our foreign visitors—to whom we extend a hearty welcome—both profitable and pleasant to them.

I declare the International Exhibition now open.

These last words pronounced by the President of the United States gave the signal for raising the flag on the Main Building, as before described. The remainder of the programme was then carried out, the machinery being set in motion by President Grant and the Emperor Dom Pedro together.

Thus ended the formal opening of the great International Exposition, which will remain open until Nov. 10th, 1876. From present indications it will be visited by millions of our own citizens and foreigners from all quarters of the globe.

The Fourth of July, the real anniversary of our independence, will be celebrated with still greater enthusiasm, and on the grandest possible scale. The programme is not yet fully determined upon, but it will include orations by Hon. Wm. B. Evarts and other distinguished speakers, an original poem written for the occasion by Bayard Taylor, Esq., music of a high order appropriate to the event, and national salutes, concluding with a grand illumination of the city at night, and a display of fire-works in the Park.

In concluding the present history of the rise and progress of our beloved country, let us make a few brief comparisons between its condition 100 years ago and now. Statistics show how its territory has been enlarged, and its population increased, its newspapers, schools, railroads, etc., and these afford a true and reliable index to its present real standing and prosperity. One hundred years ago our territory extended over about 800,000 square miles; now we have 3,500,000 miles. In 1776 our population was 3,000,000; now it is about 40,000,000. A hundred years ago we had thirteen States; now there are thirty-eight States and eleven territories. Then, railroads and steam engines were unknown; now we have 72,623 miles of railroads in operation, and hundreds of steamboats upon every navigable river and lake. The Pacific railroad, 1,800 miles long, brings New York within a week of San Francisco, while steamers from Japan to the latter port make the time from the antipodes only a few weeks longer. The magnetic telegraph is another triumph of science in the present century, and was an American invention, and the Atlantic cable, laid only a few years ago, gives us daily communication with Europe. At present we have a total of 75,137 miles of telegraph wires in this country.

In 1776 there were only thirty-four newspapers in the United States; the total number of publications reported in the census of 1870 was 5,871. A hundred years ago, our public school system was not begun, and there were few private schools; now we have nearly 168,000 public schools supported by the Government, and free to all, besides hundreds of private and scientific schools and colleges.

There have been some dark episodes in our history that we would gladly blot from our memories, but even these have been overruled for our national good. Slavery, that once deeply rooted evil, has been driven from our soil, and all sectional feelings are fast passing away. The nation has become *one* in a truer sense than was ever known before, and let us hope that in this happy Centennial year the bonds of brotherly love and patriotism may be so strengthened that they can never hereafter be broken.

THE END.
